Шкала оценивания устного ответа

Критерий оценки
Коммуникативная задача не решена. Высказывание

сводится к отдельным словам и словосочетаниям.

Коммуникативная задача не решена. В высказывании отсутствуют логика и связность. Используемые языковые и речевые средства не соответствуют ситуации / теме / проблеме. Объем высказывания значительно ниже программных требований. Речь очень медленная, со значительным количеством пауз. Допущено значительное количество ошибок, препятствующих коммуникации.

Коммуникативная задача решена частично. В высказывании отсутствуют логика и последовательность изложения. Оно носит незавершенный характер. Используемые языковые и речевые средства часто не соответствуют ситуации / теме / проблеме. Объем высказывания значительно ниже программных требований. Речь не беглая, со значительным количеством пауз. Компенсаторные умения не используются. Допущено значительное количество произносительных, лексических и грамматических ошибок, затрудняющих коммуникацию.

Коммуникативная задача решена частично. В высказывании значительно нарушена логика и последовательность изложения. Оно носит незавершенный характер,

отсутствует вывод. Используемые языковые и речевые средства не всегда соответствуют ситуации / теме / проблеме. Объем высказывания ниже программных требований. Речь не беглая, со значительным количеством пауз. Компенсаторные умения не используются. Допущен ряд произносительных и лексических ошибок и значительное количество грамматических ошибок, затрудняющих коммуникацию.

Коммуникативная задача решена не полностью. В высказывании значительно нарушены логика и последовательность изложения. Отсутствует вывод, не выражено свое отношение к обсуждаемой теме / проблеме. Используемые языковые и речевые средства не всегда соответствуют ситуации / теме / проблеме, они недостаточно разнообразны. Объем высказывания ниже программных требований. Речь недостаточно беглая. Компенсаторные умения не используются. Допущен ряд произносительных, лексических и грамматических ошибок, частично влияющих на процесс коммуникации.

Коммуникативная задача в основном решена. Высказывание носит заверченный характер, но имеются нарушения логики и последовательности изложения.

Отсутствует вывод, не выражено свое отношение к обсуждаемой теме / проблеме. Используемые языковые и речевые средства не всегда соответствуют ситуации / теме / проблеме, они недостаточно разнообразны. Используемые связующие элементы не всегда адекватны решаемой задаче. Объем высказывания несколько ниже программных требований. Речь недостаточно беглая. Компенсаторные умения используются недостаточно. Допущен ряд произносительных, лексических и грамматических ошибок, частично влияющих на процесс коммуникации.

Коммуникативная задача решена относительно полно. Высказывание носит заверченный характер, но имеются незначительные нарушения логики и последовательности. Отсутствует вывод, есть затруднения в выражении своего отношения к обсуждаемой теме / проблеме. Используемые языковые и речевые средства в основном соответствуют ситуации / теме / проблеме, но их разнообразие ограничено. Используемые связующие элементы в основном адекватны решаемой задаче. Объем высказывания соответствует программным требованиям. Речь достаточно беглая. В случае затруднений используются компенсаторные умения. Допущены отдельные произносительные, лексические и грамматические ошибки.

Коммуникативная задача решена относительно полно. Высказывание носит завершённый характер, построено логично и связно. Есть затруднения в выражении своего отношения к обсуждаемой теме / проблеме. Используемые языковые и речевые средства соответствуют ситуации / теме / проблеме и варьируются в пределах изученного материала. Используемые связующие элементы в основном адекватны. Объем высказывания соответствует программным требованиям. Речь беглая. В случае затруднений используются компенсаторные умения. Допущены отдельные произносительные, лексические и грамматические ошибки, не препятствующие коммуникации.

Коммуникативная задача решена полностью. Высказывание построено логично и связно и имеет завершённый характер. Выражено свое отношение к обсуждаемой теме / проблеме. Используемые языковые и речевые средства соответствуют ситуации / теме / проблеме и варьируются в пределах изученного материала. Используются адекватные связующие элементы. Объем высказывания соответствует программным требованиям. Речь беглая. В случае необходимости используются компенсаторные умения. Допущены единичные произносительные и грамматические

ошибки, не препятствующие коммуникации.

Коммуникативная задача решена полностью. Высказывание построено логично, связно и имеет завершенный характер. Выражено свое отношение к обсуждаемой теме / проблеме. Используемые языковые и речевые средства соответствуют ситуации / теме / проблеме и варьируются в пределах изученного материала. Используются адекватные связующие элементы. Объем высказывания соответствует программным требованиям. Речь беглая. Допущены единичные произносительные ошибки, не препятствующие коммуникации

Шкала оценивания аннотации

Критерий оценки	Баллы
Аннотация отражает полностью содержание текста. Структура четкая, отражает логическое деление текста. Использованы речевые клише.	10 баллов

Грамматические и пунктуационные ошибки отсутствуют.	
Аннотация не совсем точно передает содержание текста. Структура аннотации не достаточно верно передает логическое членение текста. Присутствуют незначительные грамматические и пунктуационные ошибки (2-4).	6 баллов
Аннотация частично передает содержание текста. Структура аннотации не соответствует логике построения текста. Речевые клише использованы неуместно, присутствуют грамматические и пунктуационные ошибки.	2 балла

Шкала оценивания делового письма

Критерий оценки

1. Структура и оформление в соответствии с видом делового письма. Данный критерий означает, что письмо оформлено по правилам, есть четкая структура письма.

как в оформлении так и в самом письме.

2. Содержание. В данном критерии учитываются насколько полно, точно и правильно было написано письмо/документ на заданную тему. Оцениваются и последовательность информации в раскрытии письма.

3. Лексика. Оценивается разнообразие лексических структур, используемых для составления документа написание письма

4. Грамматика. Оценивается разнообразие, сложность и точность грамматических конструкций.

Итого

3. Контрольные задания или иные материалы, необходимые для оценки знаний, умений, навыков и (или) опыта деятельности, характеризующих этапы формирования компетенций в процессе освоения образовательной программы

Текущий контроль

УК-4. Способен осуществлять деловую коммуникацию в устной и письменной формах на государственном языке Российской Федерации и иностранном (ых) языке (ах).

Знать: базовую лексику и выражения, а так же лексику, связанную со специальностью

Задания, необходимые для оценивания
сформированности УК-4 на пороговом уровне

1 семестр

Лексико – грамматические упражнения

1. Заполните пропуск:

1. I wish I _____ draw good enough to help you with this draft!

- a. can* *b. was able* *c. could*
d. could have

2. Выберите подходящий вопрос:

_____?

No, it's my cousin Jack's.

a: Are that your car? *b: Is that Mary's car?* *c: Whose car is that?*

d: That's your car, is not? *e: Is that your car?*

3. Заполните пропуск:

My father is _____ yours.

a: the best *b: stronger than* *c: the better than* *d: as strong* *e: strong*

4. Расположите слова в правильном порядке:

that up book pick green

a. that *b. up* *c. book* *d. pick*
e. green

5. Расположите слова в правильном порядке:

sitting them you between are

- a. sitting b. them c. you d. between
e. are

6. Выберите подходящий ответ:

Who cooks at your house?

- a: My mother cook at my house. b: Cooks my mother.
c: My father cooks at the home. d: I cook at my house.

6. Выберите подходящий ответ на следующий вопрос:
What have you eaten today?

- a. I've eaten two eggs for breakfast.
b. I ate nothing yet today.
c. I had a cup of coffee when I got up.
d. I have eat breakfast.
e. I today have eaten only a sandwich.

7. Вставьте подходящий по смыслу союз:

_____ Lola hates chocolate, she loves sugar.

- a. But b. Or c. Although d.
And e. So

8. Расположите слова в правильном порядке:

than louder actions speak words

- a. than b. louder c. actions d. speak e.
words

9. Заполните пропуск:

Isn't there anything better than this on TV?

I'm sorry, _____

- a. but these is the best.
b. there is anything better than this.
c. they isn't.

d. this is the better show.

e. there's nothing better.

10. Заполните пропуск:

Santa Barbara is in

a. California,

b. Florida,

c. Arizona,

d. Texas

Тестирование

Выберите правильный вариант

1. Could you pass the salt please?

a)Help yourself. b)I don't know. c)Over there.d)Here you are.

2. Yesterday I went _____ bus to the National Museum.

a)on b)by c)with d)in

A mountain rescue helicopter in the Bavarian Alps

However, the labor-intensive and occasional nature of mountain rescue, along with the specific techniques and local knowledge required for some environments, means that mountain rescue is often undertaken by voluntary teams. These are frequently made up of local climbers and guides. Often paid rescue services may work in co-operation with voluntary services. For instance, a paid helicopter rescue team may work with a volunteer mountain rescue team on the ground. Mountain rescue is often free, although in some parts of the world rescue organizations may charge for their services. But there are also exceptions,

e. g. Switzerland, where mountain rescue is highly expensive (some 2,000 to 4,000 USD) and will be charged to the patient. In more remote or less-developed parts of the world organized mountain rescue services are often negligible or non-existent.

Mine rescue is the specialized job of rescuing miners and others who have become trapped or injured in underground mines, often coalmines. Its members are recruited from men who are experienced in working underground in mines and with the various sorts of mine machinery that they may come across or have to find a way round during the rescue.

Mine rescue teams are specialized teams of men who are familiar with procedures used to rescue people trapped in mines by hazards. Hazards in mines may include fires, explosions, cave-in, toxic gas and water entering the mine. Most mine rescue teams are composed of teams of miners who know the mine. Local and state governments also have teams of persons on call ready to respond to mine accidents.

Mining laws of today require trained, properly equipped mine rescue teams to be maintained at all mining operations, both surface (open pit) and underground.

Mine rescue is a dangerous and rescue crews are made up of volunteers who risk their lives to save their fellow workers.

In Britain, mine rescue men are sometimes called to investigate holes in the ground that have appeared because of land subsidence into old mineshafts and mine workings.

Bomb disposal is the process by which hazardous explosive devices are rendered safe. "Bomb disposal" is an all encompassing term to describe the separate, but interrelated functions in the military, public safety and civilian fields.

Search and rescue (acronym SAR) is an operation mounted by emergency services, often well-trained volunteers, to find someone believed to be in distress, lost, sick or injured either in a remote or difficult to access area, such as mountains, desert or forest ("Wilderness search and rescue"), or at sea, whether close to shore or not. The term can also be applied in urban situations when young children or senile people wander away from their homes and cannot be found.

Urban search and rescue (also known as Suburban Search and Rescue as USAR Teams often relates to structural

collapses and other technical rescue) operations are search and rescue operations conducted in a city. One of the most common is searching for people buried as a result of a building collapse, as might happen after an earthquake. Sometimes, urban searches are performed for missing persons with certain criteria (for example, missing Alzheimer's patients with a history of wandering away from their home). Also, a wilderness search may become transition into an urban search. This is common when lost children are involved.

Maritime search and rescue services such as the local coast guard or lifeboat.

Blood or Organ Transplant Supply — Organisations that provide organs or blood on an emergency basis, such as the National Blood Service of the United Kingdom.

Владеть: профессионально-ориентированной межкультурной компетенцией

Задания, необходимые для оценивания сформированности УК-4 на продвинутом уровне

Соотнесите названия служб МЧС (1—7) с описанием их деятельности (А—Г).

- 1) Public utility
- 2) Emergency road service
- 3) Emergency Social Services
- 4) Community emergency response teams & certified first responders
- 5) Famine relief teams
- 6) Lifeguards
- 7) Park rangers

- a)) They are charged with reacting to emergencies within their own area, usually a pool, beach or open water area.
- b) They safeguard electricity, gas and water if infrastructure fails.
- c) They look after many emergencies within their given area, including fire, medical and security points.
- d) They provide repair or recovery for vehicles which have broken down or been involved in a collision.
- e) They organise facilities such as rest centres in case of mass emergencies.
- f) They preserve the well-being of people affected by an emergency or disaster. Teams are established in local municipalities and assemble together for meetings.
- g) A famine is a phenomenon in which a large percentage of the population of a region or country are so undernourished that death by starvation becomes increasingly common. In spite of the much greater technological and economic resources of the modern world, famine still strikes many parts of the world, mostly in the developing nations. Famine is associated with naturally-occurring crop failure and pestilence and artificially with war and genocide.

УК-4. Способен осуществлять деловую коммуникацию в устной и письменной формах на государственном языке Российской Федерации и иностранном (ых) языке (ах).

Задания, необходимые для оценивания сформированности УК-4

Примерный список тем для беседы на зачёте и экзамене

1 семестр

1. Иностранный (английский) язык в современном мире.
2. Человек и общество.
3. Семейные ценности в современном мире.
4. География и краткая история Великобритании и США.
5. Жизнь в городе.
6. Искусство в России и за рубежом.

2 семестр

1. Система образования в России, Великобритании и США.
2. Мир профессий и карьера.
3. Информационные технологии в жизни молодежи.
4. Проблемы экологии.
5. Спорт и здоровый образ жизни.
6. Путешествия и транспорт.

3 семестр

1. История развития науки безопасность жизнедеятельность. Основные этапы становления науки.
2. Навыки выживания в экстремальных условиях.
3. Методы и средства спасения человека. Оказание первой помощи.
4. История развития служб спасения в России и в странах изучаемого языка.
5. Сохранение окружающей среды. Природные и техногенные катастрофы.
6. Антитеррористические структуры в России и в странах изучаемого языка.
7. Выдающиеся ученые, военачальники, политические деятели.
8. Проектная деятельность в профессиональной сфере.

1 семестр. Тексты социокультурной направленности

1. The Russian Federation

The Russian Federation is the largest country in the world. It occupies about one-seventh of the earth's surface. It covers the eastern part of Europe and the northern part of Asia; Its total area is about 17 million square kilometres. The country is washed by 12 seas of 3 oceans: the Pacific, the Arctic and the Atlantic. In the south Russia borders on China, Mongolia, Korea, Kazakhstan, Georgia and Azerbaijan. In the west it borders on Norway, Finland, the Baltic States, Belarus and Ukraine. It also has a sea-border with the USA.

There is hardly a country in the world where such a variety of scenery and vegetation can be found. There are steppes in the south, plains and forests in the midland, tundra and taiga in the north, highlands and deserts in the east. There are two great plains in Russia: the Great Russian Plain and the West Siberian Lowland. There are several mountain chains on the territory of the country: the Urals, the Caucasus, the Altai and others. The largest mountain chain, the Urals, separates Europe from Asia.

There are; over two million rivers in Russia. Europe's biggest river, the Volga, flows into the Caspian Sea. The main Siberian rivers — the Ob, the Yenisei and the Lena — flow from the south to the north. The Amur in the Far East flows into the Pacific Ocean.

Russia is rich in beautiful lakes. The world's deepest lake (1,600 metres) is Lake Baikal. It is much smaller than the Baltic Sea, but there is much more water in it than in the Baltic Sea. The water in the lake is so clear that if you look down you can see the stones on the bottom.

Russia has one-sixth of the world's forests. They are concentrated in the European north of the country, in Siberia and in the Far East.

On the vast territory of the country there are various types of climate, from arctic in the north, to subtropical in the south. In the middle of the country the climate is temperate and continental.

Russia is rich in oil, coal, iron ore, natural gas, copper, nickel and other mineral resources.

Russia is a parliamentary republic. The Head of State is the President. The legislative power is exercised by the Duma.

The capital of Russia is Moscow. It is its largest political, scientific, cultural and industrial centre. It is one of the oldest Russian cities.

Today there are a lot of opportunities for this country to become one of the leading countries in the world. It has great past and promising future.

2. Monarchy of the United Kingdom

The monarchy of the United Kingdom, commonly referred to as the British monarchy, is the constitutional form of government by which a hereditary sovereign reigns as the head of state United Kingdom, the Crown Dependencies (the Bailiwick of Guernsey, the Bailiwick of Jersey and the Isle of Man) and the British Overseas Territories. The current monarch is King Charles III, who ascended the throne on 8 September 2022, upon the death of his mother, Queen Elizabeth II.

The monarch and their immediate family undertake various official, ceremonial, diplomatic and representational duties. The monarchy is 'constitutional', meaning that, although formally the monarch still has authority over the government—which is known as "His/Her Majesty's Government"—this power may only be used according to laws enacted in Parliament and within constraints of convention and precedent. The Crown also occupies a unique cultural role, serving as an unofficial brand ambassador for British interests and values abroad, increasing tourism at home, and promoting charities throughout civil society.

The British monarchy traces its origins from the petty kingdoms Anglo-Saxon England and early medieval Scotland, which consolidated into the kingdoms of England and Scotland by the 10th century. England was conquered by the Normans in 1066, after which Wales also gradually came under the control of Anglo-Normans. The process was completed in the 13th century when the Principality of Wales became a client state of the English kingdom. In the 16th century, English and Scottish monarchs played a central role in what became the religious English Reformation and Scottish Reformation, and the English king became King of Ireland.

The Balfour Declaration of 1926 recognised the evolution of the Dominions of the Empire into separate, self-governing countries within a Commonwealth of Nations. Also in this period, the monarchy in Ireland eventually became limited to Northern Ireland. In the years after the Second World War, the vast majority of British colonies and territories became independent, effectively bringing the Empire to an end. George VI and his successors, Elizabeth II and Charles III, adopted the title Head of the Commonwealth as a symbol of the free association of its independent member states. The United Kingdom and fourteen other independent sovereign states that share the same person as their monarch are called Commonwealth realms. Although the monarch is shared, each country is sovereign and independent of the others, and the monarch has a different, specific, and official national title and style for each realm. Although the term is rarely used today, the fifteen Commonwealth realms are in personal union.

Text 3. City Transport of New York

Visitors to America are immediately struck by the number of automobiles on the highways and in the city streets. Cars fill the roads and crowd the streets of the city.

For a city like New York, city transport is a big problem. Though there are a lot of private automobiles, many people still use public transport. New York's public transport includes the subway, an extensive bus and street car service and taxi cabs.

In rush hours it is better to take the subway. You walk a few blocks to the nearest subway and get downstairs. You buy some tokens at the change booth and get through the turnstile.

Then you have to find the right platform. In New York subway system there are parallel tracks for local and express trains. The local train stops at every station, the express only at every fifth or sixth station. It is very convenient to take an express if you go very far to the other end of the city. New York subway system is a rather complicated one.

New York has an extensive bus service operating on a transit basis. When a passenger enters a bus or street car and deposits his fare in the fare box, he may request a transfer. The driver or operator will give him a slip of paper on which there will be printed the time and direction of the trip. With this transfer, the passenger may get on another bus or street car at a transfer point on his route and continue his ride without additional cost.

A taxi cab service is another means of transportation in the city. There are no taxi stands and you can stop a taxi by whistling, shouting or raising your hand. Taxi cabs keep running along the streets all the time. Tips are a vital part of drivers' earning.

Text 4. The Climate and Seasons in England

The warm current of the Gulf Stream brings a temperate climate to the British Isles. So the weather in England is mild in all seasons. The temperature seldom reaches extremes of heat or cold. It averages about 40 degrees Fahrenheit in January and 60 degrees in August. During the day the changes in temperature are not very great, that is why weather forecasts do not give the temperature of the air.

The best seasons in England are spring and summer. In summer the sun shines brightly but it is not hot. Green grass covers the fields and meadows. Here and there beautiful flowers are growing. It is pleasant to walk in the woods and forests, to breathe fresh air and listen to the songs of the birds. The days in summer are long and the nights are short so you have much time to enjoy the wonderful landscape.

Autumn is a rainy season and the weather is mostly dull. But there may be a spell of sunny weather in late September, which they call Indian summer, when the sky seems high, the sun shines and the earth is covered with fallen leaves. The most typical feature of the climate in England is the thick fog that they often have in autumn and in winter. It comes often and stays for weeks.

In winter the sky is pale, grey and has low clouds. The sun shines rarely, its rays are pale, it sets early and rises late. The winter air is frosty and the weather is windy. They have all sorts of weather in winter. Sometimes it rains and sometimes it snows heavily, and they also have fog and frost. But it rains more often than it snows. That is why English people do not wear heavy overcoats, but only warm raincoats.

Towards the end of the winter the snow begins to melt, the sky becomes blue, the first grass and flowers appear, the birds come back from the warm lands. Spring comes.

Text 5. How to Make Friends?

Let's be honest, there are times when you want to know how to make friends. Here are some steps and tips to help you overcome these obstacles. Spend more time around people. Don't be mean; you do not want to lose friends. If you want to make friends, you first need to put yourself out there somehow in order to meet people. If you're still in school, sit somewhere with other people. It doesn't have to be the "popular" table, or a

crowded one, but one with at least two other people. The popular kids won't matter when you're older, but a true friend will be there for you forever. Remember, friends seldom come knocking on your door while you sit at home playing computer games. Populars aren't always going to be mean to you. They just need to know you a little better.

Join an organization or club with people who have common interests. You don't necessarily need to have a lot of common interests with people in order to make friends with them. In fact, some of the most rewarding friendships are between two people who don't have much in common at all, but if you like a specific topic, try searching for just a location. It's a great way to meet new local people! Social networking sites such as Facebook, Twitter and Google+ are great way to meet new people and learn more about the people you meet. When you are chatting just say are you on Facebook? or what is your name on Twitter? A church, Masjid (mosque) or other house of worship is a great place to start since you have at least a religious faith in common. Just remember to be safe on the internet, you don't know who is actually on the other end most of the time.

Join a sports team. A common misconception about this is that you have to be really good at playing a particular sport in order to make friends with others on the team, but not all teams are so competitive. As long as you enjoy the sport and support your teammates, joining a local team with a laid-back attitude could be a great way to make new friends. But a sports team isn't the only way. If you play instruments or sing, try joining a band or choir.

Talk to people. You can join a club, go to school, or go to church but you still won't make friends if you don't actually talk to people. By the same to ken, you don't have to be involved with an organization to be social, and any time you talk to someone, you have a chance at making a lasting friend.

Make eye contact and smile. If you have an unfriendly countenance, people are less likely to be receptive to your friendship. Try not squinting (get some glasses), looking bored, frowning or appearing blankly deadpan, folding your arms (this practically screams "don't talk to me") or hanging out in a corner; such habits may make you look troubled or disinterested.

Text 6. How to Find a Hobby?

Look at what interests you. Examine what takes up your spare time when you have it. Do you enjoy reading books? Maybe you want to try your hand at writing them.

Think about what you value most. What traits do you prize? Do you value wisdom or courage? Do you feel drawn to people who give back? Do you admire artistic expression? Let those traits guide you when choosing a hobby.

For instance, maybe you could volunteer at a library as a hobby because you value education, or maybe you could take up painting because you admire people who can express themselves with art.

If you don't have a great deal of patience, then maybe hand sewing isn't something you'd enjoy. However, if you love tinkering and building things, maybe you should consider a hobby like working on older cars or building furniture. Play to your strengths.

Think back to what you loved as a kid. Did you like to race bikes with your friends? Were you really into comic books? Did you love to paint or draw?

Think about what really got you excited as a kid and what you could spend hours doing.

Pick up where you left off. If you rode bikes, try getting a new (adult) bike and exploring your neighborhood. Look at adult versions of what you loved. That is, if you loved comic books, try attending a comic book convention (comicon) to find people with similar interests. Maybe you loved board games as a kid. Check out the wide variety of new board games on the market, which offer options in everything from role-playing to cooperative games.

Visit a craft store. Wander around a craft store to see what hobbies are available. You might find something you never thought about, such as building model airplanes or learning how to work with clay. Check out hobby websites. Certain websites are dedicated solely to exploring hobbies, and you can use them to figure out what you'd like to do with your time.

Be willing to try more than one hobby. The first one you try might not be the right fit. Don't be afraid to move on and try something else. You have a right to decide when you're not interested in something.

Say "yes." That is, don't be afraid to say "yes" to activities you normally bow out of. Maybe going to the art museum doesn't sound very exciting to you, but when your friend invites you to go, give it a try anyway. You might find a hobby you never expected to enjoy, such as painting or art restoration.

Text 7. Friendship

What is friendship? Some people will say that it is a feeling of mutual liking between two or more people, other will add that it is a state when one person understands and supports the other one.

To my mind friendship can be compared to a tree. Its seed should find good soil and under good conditions it will grow into a tree. As the years go by the tree stands firmer and firmer on the ground. And if it is strong enough, it will survive all the storms and winds. But to help it, we should take care of it and love it.

The most important feeling that exists between friends is trust. It never appears by itself, it's the result of a long friendship and this feeling is very valuable. Respect and tolerance are also very important; it means that you don't criticize your friend's way of living, but try to understand him, discuss problems with him and explain to him what you think is good and what is bad. A friend is a person who can help you in time, lend you any sum of money for a long period of time without any percent, whom you can wake up in the middle of the night just to say you feel worried or who is eager to do everything for you waiting nothing in return, who supports you in all your beginnings and who will never betray you.

Lucky are those people who have friends. I'm happy to have lots of friends, too. Some of them are very close, some are less. But all of them make my life interesting and enjoyable.

I appreciate friendship. It makes happiness grow brighter and grief less painful, because we have friends to share it with. When we doubt our ability to fulfill our aspiration or to reach our secret goal it is our best friend who gives us a spark of assurance. And we trust our friends and we are grateful to them. Friendship is a bridge between loneliness and fellowship, frustration and confidence, despair and hope, setbacks and success. That's why a true friend is a priceless gift. They are rich who have true friends, says a proverb and I agree.

Text 8. Future Life

Can you imagine what our lives will be like in the year 2050? Perhaps you will be flying off for a holiday on the moon, or maybe you will be taking your dog for a walk in the virtual reality.

We recently carried out a survey of 1,000 people from different countries to find out what they think life will be like in the future. The results clearly demonstrate both our hopes and fears. The survey suggests that friendship — one of the most important human relationships -will have changed dramatically.

People will make friends through the Internet. What is more, a large number of people will even come across their future husbands or wives in this way! Computers will have become absolutely essential by 2050. Even now, some people describe them as their best friend! Others, however, say that we will become much more isolated from each other because we will have little real human contact.

Education will have changed a lot too. As more and more children will be using computers in schools, certain abilities, such as mental arithmetic will not be necessary since there will be computer programs. Even writing by hand will have become a thing of the past.

According to the survey, home life will be better. Most people believe that by 2050 robots will be doing the housework and we will be eating ready-made food. A lot of people think that we might only cook for fun in the future.

Space exploration will become increasingly popular. Fifty per cent of the people we talked to believe that man will regularly visit Mars. They also believe that travel on our own planet will probably change. Almost everyone thinks that there will be no cars in the city centers. Some even think that environmentally-friendly electric or solar-powered cars will have replaced the cars we use nowadays. Pollution is something that seems to worry many people. Some fear that it will continue to get worse, and that our planet will become impossible to live on. Others even foresee that one day we'll have to pay for clean air just like we do now for clean water.

On the other hand, people seem to be quite optimistic about the benefits of genetic engineering, as they think scientists will use it to cure diseases like cancer and AIDS. If scientists manage to find a cure for these, we'll have a much healthier society. Some people worry about the future, while others are full of hope and enthusiasm. No matter how dark or bright it may seem, it is up to us to look after our planet and try to make it a better place to live.

Text 9. Globalization

Globalization is a controversial issue for business and governments throughout the world. We recognize globalization mainly through its effects. It's a bit like electricity — we can not see it, but we certainly observe what it does. Globalization can be described as a process by which the people of the world are unified into a single society and function together. This process is a combination of economic, technological, sociocultural and political forces. It's a movement of people, goods, capital and ideas due to increased economic integration.

Globalization is a controversial issue mainly because different groups interpret it in different ways. For its opponents globalization is a threatening word. It prompts visions of large multinationals dominating the world in pursuit of ever-higher profits. Many pressure groups fear that globalization threatens the environment as well as national cultures — they predict that it will make the rich nations richer and the developing countries even poorer than they are. But its supporters have another point of view. They believe that increasing and freer trade between nations will offer prosperity and economic growth for all countries and businesses.

So globalization is likely to be a hot potato for the twenty-first century. As far as the benefits are concerned there it's possible to name next statements:

1. An opportunity to get acquainted with cultures of different nations;
2. A variety of choice for consumers: when they can buy in their local stores and supermarkets not only home-produced goods but also foreign ones;
3. Transnational corporations create additional work places for local people, at the same it is convenient for these large corporations as well: they may locate the labour-intensive part of their production process in countries with a relative abundance of labour in order to minimize their costs;
4. Another point is risk-sharing. It's more reasonable to invest money not in one company but to create an international company with great amount of subsidiaries in various countries, so it won't have so serious consequences if one of them will not stand cut-throat competition;

The disadvantages of globalization are:

1. Pollution of the environment (and there one peculiarity should be admitted — developed countries try to locate their harmful for the environment factories and works not in their own countries but in developing countries);
2. Globalization destroys cultural identity, for example Europeans usually try to impose their customs and traditions on Asian people;

3. Multinational corporations prefer to use cheap labour-force of developing countries for instance in Asia. And at the same time they provide their workers with bad and sometimes even awful working conditions;
 4. It's difficult for domestic producers to compete with multinational corporations especially if it's an infant industry;
- The last but not least is that we don't actually know to what globalization can lead, we don't realize its consequences.

Text 10. Immigration

Immigration has existed during the whole history of mankind. At distant times tribes roamed in search for new pastures for their livestock, new places for hunting and fishery. Today migration still takes place in the world, people are forced to change their places of living due to different natural and man-made calamities. So migration is the process which takes place when an individual or a group leaves one country for another with the intention to settle down in that country permanently.

There are many reasons which make people leave their homes and move to other places. Economic reasons have always been among the main reasons for migration. Life in poverty and despair often forces people to search for a better life. The gap between the developed countries and the third world countries increases year by year, as a result people have move to industrialized countries in order to have stable earnings, better employment opportunities and higher standards of living. Many people migrate because of natural catastrophes. It is possible to mention the situation in Japan when natural disasters have forced thousands of people leave their native country in search for security. Some people change their place of living in search for political freedom; it can be migration towards political liberty and political rights or an escape from the governmental persecution. It also makes sense to name ethnic and religious reasons. Ethnic conflicts in some countries and religious intolerance often force people to look for a refuge in other countries. Wars and a high rate of criminality also induce people to change the countries they live in.

However I do not want to say that only negative reasons make people migrate, positive reasons make up small percentage of annual migrations but nevertheless they exist. There are cases when people migrate to reunite their families, to marry and to build up new families or to start business.

Immigration has both positive and negative consequences for people. After immigration people receive more opportunities for education and self-realization at work, better life standards, security and confidence in their future, more social benefits, etc. But we shouldn't forget about the reverse of the coin. Immigration has its negative consequences as well. Pretty often immigration causes dissatisfaction of native citizens: it leads to racism, an increased antagonism and other social problems.

In general, it seems to me that migration is an endless process. People will change their places of living as long as there is an economic gap between developed and developing countries, as long as wars and ethnic conflicts exist, as long as people will suffer from famine and starvation, as long as religious persecution takes place in the world. I'm definitely sure that if the mankind wants to solve the problem of illegal immigration, it is necessary to solve the problems which cause migration. I'm definitely sure that as soon as we do it, the percentage of illegal immigration will decline by itself.

Text 11. Role of Women in the Society

In the 17th century rich women normally were taught at home by a tutor, they were taught subjects like Latin, French, Needlework and they were also taught how to look pretty and how to play the piano and other musical instruments. When they became older their parents decided who they were going to marry and the family of the woman should pay a dowry to the parents of the future husband. Rich women wouldn't normally get a job, they could just stay at home and look after the family and tell the servants what to do. Poor women did not go to school at all; they just looked after their home, children and prepared meals or worked in fields. They didn't get paid much and had to work hard.

In the 19th century rich women were educated at home and learned pretty much the same as in the 17th century. They were taught how to play the piano, speak French, entertain guests and look attractive. After 1870 it was made compulsory for all women to have education. However, girls didn't learn the same subjects as boys. Girls learnt subjects like laundry, cookery, needlework and housewifery skills. Rich women did not work, but ran their home with the help of their servants, after 1870 some women could become teachers and others could work as secretaries or clerks. So, women could work but there was a condition. At that time any woman had to retire when she got married.

In the 20th century, when World War I started, women could leave their underpaid jobs and could get jobs at factories because all men had gone off to the war, so women worked in the factories, making armours for the war.

When the war was over, women had to go back to their old jobs and they didn't earn as much money as they were used to earn. Later a typewriting machine was invented and jobs as secretaries became available for women. Some women became teachers. Women were now allowed to vote and some women got involved in politics.

Women started to wear different clothes, they did not wear corsets any more, they wore short dresses, even trousers.

To my mind, the role of women has changed quite a lot. I think all changes that happened in the 20th century were good, because women became to be treated more equally and it launched the processes of emancipation.

Text 12. Crime in our society

Crime has been around us for many centuries. Every day when we open a newspaper or turn on TV almost all we read or hear is about criminals and their illegal actions. According to the law, people who commit a crime must be punished, imprisoned or even sentenced to a death penalty. Without punishment our life in the society would be less secure, although sometimes punishment isn't strict enough, to my mind.

Some kinds of crimes are as old as the human society (such as stealing, pick-pocketing, vandalism, assault or domestic violence, murder and manslaughter), others are a more recent phenomenon. Armed robbery of stores and banks, hacking into computers (so called "cyber frauds"), corruption or forgery of money and documents, for instance, are some of them. The 20th century has also seen the appearance of organized crimes such as drug-trafficking, drug-smuggling and hijacking. Statistics show an alarming rise of violent crimes and crimes to do with the illegal sale of arms across the world. Unfortunately women and children often become the victims of crime. Sometimes criminals kidnap rich people or their kids and ask for a ransom to be paid for them.

Besides violent crimes, there are so called "white-collar crimes" in our modern society. These are frauds when a person isn't physically threatened or hurt. Among them are tax evasion (when people are accused of not paying taxes on purpose), bribery, identity theft (when a criminal steals personal information of another person in order to use his credit cards or bank accounts, for example).

To crown it all, we must regret that today a great deal of crimes is committed by teenagers who want to become independent as soon as possible and to find a royal road to getting much money. Teenagers use drugs and drink alcohol, so they can't control themselves. Moreover, modern TV programs and films containing much violence and sex often have huge and negative influence on teenagers.

In conclusion I should say that crime prevention in our society is an extremely difficult and complicated task because we should change our social and moral principles at large.

Text 13. Education in our life

Our modern world is full of technological advances and education is very important today. Human progress mainly depends on well-educated people. They say that those who have information rule the world.

When we are 7 years old we are sent to schools to get useful knowledge about our world, although that isn't the main purpose of education. The most important thing, to my mind, is learning how to learn in order to use this ability in our future life. At school children also enjoy lots of cultural activities which reveal their personal talents. However some people think that the current system of education isn't able to teach pupils how to become good thinkers and schools are only about passing exams.

Education is very important for me and it goes without saying that I'm planning to get a higher education after finishing school. I'm sure it will enable me to achieve better prospects in career growth. Nowadays you can't find an interesting job with a decent salary without a certain level of education because every company looks for well-qualified specialists. While studying at a university you get essential knowledge for your future profession. Moreover, university life is always exciting and eventful.

I believe it is impossible to overestimate the importance of education. It is one of the most valuable possessions and the most powerful weapons we can get in our life. It develops many sides of human personality and helps us to understand ourselves deeper. Education trains the mind to think, that's why educated people have the ability to change our world and contribute to the well-being of our society.

Text 14. Student life

Students are the future of every country. They are young citizens of our society, full of infinite energy and progressive ideas, fantastic plans and noble ambitions, hopes and dreams. Student life is the brightest period of our life. It is a mixture of studies and great fun. I know that my parents (ex-students) miss those old good days of their student life.

A student has certain duties to perform. It goes without saying that the primary student duty is studying hard and acquiring proper knowledge for the future career. He must attend all the classes at college, do all the work at the right time, be punctual and disciplined. It can help the student achieve his goals and become diligent and perseverant. If he doesn't neglect his studies he will receive rich dividends in his future work.

Examination time at the end of each semester is quite tough for students. They spend endless days and nights on studying and cramming. Although some of them use cheating, copying someone's essays or course works. And you are lucky if you are not caught by the teacher because he can punish you by a poor mark or even by excluding from the college.

Most of the student's time is devoted to reading and learning. It's unbelievable but some students manage to deal with part-time jobs because they need a lot of money to study at college or university. Tuition fees and books are very costly nowadays, and if you rent an

apartment it's even more expensive. So students have busy schedules including studies, work and going out to socialize.

A good student never wastes his spare time uselessly. He should also go in for sports to stay in good health and mood. They say: "A sound mind lives in a sound body." Students love participating in both academic and extra-curricular activities at college: different festivals, intellectual quizzes and summer camps. This social life broadens the mind, develops your talents and communication skills. And this is a wonderful time when you find real friends among your classmates at college.

Finally I'd like to say that it is absolutely great to be a student!

Text 15. Environmental Pollution

People have always polluted their surroundings. But until now pollution was not such a serious problem. People lived in uncrowded rural areas and did not have pollution — causing machines. With the development of crowded industrial cities which put huge amounts of pollutants into small areas, the problem has become more important.

Automobiles and other new inventions make pollution steadily worse. Since the late 1960's people have become alarmed with the danger of pollution.

Air, water, and soil are necessary for existence of all living things. But polluted air can cause illness, and even death. Polluted water kills fish and other marine life. On polluted soil, food can't be grown. In addition environmental pollution spoils the natural beauty of our planet.

Pollution is as complicated as serious problem. Automobiles are polluting the air but they provide transportation for the people. Factories pollute the air and the water but they provide jobs for people and produce necessary goods. Fertilizers and pesticides are important for growing crops but they can ruin soil.

Thus, people would have to stop using many useful things if they wanted to end pollution immediately. Most people do not want that of course. But pollution can be reduced gradually.

Scientists and engineers can find the ways to reduce pollution from automobiles and factories. Government can pass the laws that would make enterprises take measures for reducing of pollution. Individuals and groups of people can work together to persuade enterprises to stop polluting activities.

Text 16. My household chores/duties

I think nobody likes it when his house is in a mess. Doing household chores and keeping the house clean and cozy are necessary in every flat.

My parents work hard and they get rather tired after work. So it goes without saying that they don't have to manage all the housework and I have to help them. Everyone in our family has some household chores. But frankly speaking I must admit that my mother does the majority of the housework. Some things must be done every day, others need to be done once or twice a week (like watering the plants).

My daily chores are making my bed, washing up, tidying my room in the evening, cleaning my shoes and taking out the rubbish. This is my usual routine. I also pick up my little sister from the kindergarten. Fortunately I don't have to cook any food because my mum and granny do that and they really enjoy cooking. I just sometimes help them and serve the table. Once or twice a week my mother asks me to go shopping to the nearest food supermarket. I usually buy some bread, milk, fruits and vegetables.

Once a week, on Sundays my parents give the flat a big cleaning. There is a lot of work to do: dusting the furniture, ironing the clothes, mopping the floor, clearing out the bathroom and the kitchen. I am busy with vacuum-cleaning the carpets in our bedrooms and cleaning the mirrors.

I don't consider my household chores difficult and I can cope with them easily, but sometimes I feel a bit lazy or I may be too busy with my school homework.

Text 17. British Homes

There are 22 million homes in Britain — big homes and small homes, old cottages and new buildings, houses and flats. (Americans say «apartment» but British people say «flat»). Many British people love old houses and these are often more expensive than modern ones.

They also love gardening and you will see gardens everywhere you go: in towns, villages and out in the country. Some are very small with just one tree and a few flowers. Others are enormous with plenty of flowers and enough vegetables and fruit trees. Two third of the families in Britain own their houses.

Millions of these houses are the same with two or three bedrooms and a bathroom upstairs, dining-room and kitchen downstairs. To pay for their house, home owners borrow money from a «building society» and pay back a little every month.

There are a great many different kinds of homes in Britain, but there are not enough! It is often very difficult for young people to find a home when they want to start a family. British homes are usually smaller than American homes. But like Americans old people, young families and unmarried people do not usually live together.

Text 18. St. Petersburg and its attractions

St. Petersburg is a Russian port city on the Baltic Sea. It was the imperial capital for 2 centuries, having been founded in 1703 by Peter the Great. The city remains Russia's cultural center, with its world-famous museums, palaces and theatres.

The Hermitage is one of the largest and oldest museums in the world. It was founded by Catherine the Great. The museum includes masterpieces by Leonardo da Vinci, Picasso, Renoir, Vincent van Gogh, Rembrandt and many others. Experts say it would take 11 years to examine about 3 million exhibits in the Hermitage.

Nevsky Prospect is the main street in St. Petersburg which was cut through thick woodland in 1718. Kazan Cathedral with its impressive colonnade is located just in the heart of the street. The prospect is lined with numerous cafés, restaurants and shops.

Church of the Savior on the Spilled Blood with its colorful domes and bright mosaics was constructed in the early 20th century on the spot of the 1881 assassination of Tsar Alexander II. Used by the Soviets to store potatoes during the Second World War 900-day siege of the city by Nazi forces, the church was finally reopened to the public in 1997.

Peter and Paul Fortress was one of the first buildings to be erected in St Petersburg in 1703, including the Baroque Peter and Paul Cathedral, which is the final resting place of almost all of Russia's pre-revolutionary leaders (Peter the Great, Catherine the Great, Nicholas II and others). Other sights include an impressive statue of Peter the Great named "The Bronze horseman", a working mint and the cells where revolutionaries were held.

Mariinsky Theatre was first opened in 1860. The theatre has long been one of the world's most prominent venues for ballet and opera. Its dance school trained such world-famous ballet dancers as Rudolf Nureyev and Vatslav Nijinsky.

While the State Hermitage displays fine art from all over the world, the Russian Museum contains home-grown masterpieces. Opened in 1898, the museum exhibits everything from priceless orthodox icons to paintings by such famous artists as Surikov, Vasnetsov, Aivazovsky, Kandinsky. Among outstanding works are "The Last Day of Pompeii" by Karl Bryullov, and Ilya Repin's "The Zaporozhye Cossacks Writing a Letter to the Turkish Sultan".

The gold-domed 19th-century St Isaac's Cathedral is one of St Petersburg's most famous landmarks. It offers wonderful views of the city from its gilded viewing platform. Statues of the apostles stand guard at the top of St Isaac's, while its massive doors are decorated with biblical scenes. Inside, the cathedral boasts a vast ceiling painting by Karl Bryullov as well as St Catherine's Chapel.

Vasilevskiy Island — the largest island in St Petersburg which offers a bizarre selection of attractions including a pair of 15th-century sphinxes from Egypt on the river side and a museum of biological oddities "Kunstkamera" where you can see the skeleton and the heart of Peter the Great's gigantic personal servant. The island is also home to the 19th-century Rostral Columns whose torches are lit on special occasions. It's a great place to wander along the banks of the Neva river.

Text 19. Baikal

In the midst of a thinly populated wilderness there is the foremost natural wonder — Lake Baikal. It is the oldest lake in the world — its age is about 25-30 million years. Scientists estimated that more than 1500 life forms live in and around this lake. They can be found nowhere else on Earth. It occupies the territory of 12000 m² and 400 km long. About 30 uninhabited isles are scattered throughout the lake. It's the largest reservoir of drinking water. It contains 1/6 of fresh water found on the planet and in spite of the vast pollution by the nearby industry the most of it still remains clean and clear.

Most of the coastline lies in an environmentally protected area. The most numerous of the indigenous people are Buryats. They have been living here for many centuries. A feeling of tranquility settles over the coastal villages during long summer afternoons. A vehicle driving along the village's streets is a rare sight. A motorcycle with a sidecar is the most popular civil transport; and a passenger car still remains an object of curiosity for children.

The area's largest city is Ulan-Ude which was first established by the Russians as an outpost for tsar's tax collectors during Russia's Eastward expansion in the XVI and XVII centuries. It lies in the border area between the Siberian forests and the grassy steppes. It's an average Siberian town without much distinction, except for a strange fancy relict in the main square. The world's biggest head of Vladimir Lenin has more than 25 feet tall and it is ironically said by rumor that it was inspired by the head of Buddha that was located in Ulan-Ude before the Soviet takeover. And now although most of Soviet monuments have been dismantled this one is going to stay because the locals became quite fond of it.

Text 20. Ireland

Ireland is an island on the west side of Europe. The capital of Ireland is Dublin. There are about 5 million people in the Republic of Ireland. It is a small country but a lot of people know about it. In many countries there are Irish priests and nuns.

People left Ireland to find work in those countries and they stayed there. All over the world there are people with Irish blood.

The country is in two parts. The larger part, the Republic of Ireland, is in the south. The smaller part of Ireland, Northern Ireland, is part of the United Kingdom and its big city is Belfast. Like a lot of other countries, Ireland had sad and difficult times, but it had good times too.

The Irish are kind and polite people, they welcome strangers. The Irish love to talk. Ireland is a beautiful country with fine lakes, tall mountains and attractive beaches. It has two great rivers. It is a very green country. It is green partly because it rains too much.

Ireland is a country of good butter, good beer and good horses. People come from all over the world to buy Irish horses, from Europe, from America, from Arab countries and from the Far East. Ireland also has its manufacturing industry.

Text 21. British Wedding

There are a number of traditions for weddings that have survived into the 21st century. It is still traditional for the bride and groom to have their own parties the night before getting married. The groom's party is called a 'Stag party', while the bride's is known as a 'Hen party'.

On the morning of the wedding, the groom should not see the bride. If he does, this is bad luck. The bride puts on her special wedding dress, which is usually white. She also needs to wear 'something old, something new, something borrowed and something blue'.

At the church, or registry office, the bride and groom exchange rings before walking together back down the aisle. When they get outside, the bride throws her bouquet in the air. Tradition says that whoever catches it will be the next person to get married.

But it's not only the bride who throws something. All the people at the wedding throw confetti and rice over the happy couple.

Finally, after the reception, the bride and groom drive off to have their honeymoon.

Text 22. Winston Churchill Biography

Sir Winston Churchill (30 November 1874 – 24 January 1965) was a British politician and author, best known as Prime Minister of the United Kingdom during the Second World War. Churchill was famous for his stubborn resistance to Hitler during the darkest hours of the Second World War. Winston was born at Blenheim Palace, Woodstock near Oxford to an aristocratic family – the Duke of Marlborough. He was brought up by servants and friends of the family. He rarely spoke to his father, and he spent most of his childhood at boarding school – Harrow. Churchill wasn't the best student, having a rebellious nature and was reportedly slow to learn; but Churchill excelled at sports and joined the officer cadet corps, which he enjoyed.

On leaving school, he went to Sandhurst to train as an officer. After gaining his commission, Churchill sought to gain as much active military experience as possible. He used his mother's connections to get postings to areas of conflict. The young Churchill received postings to Cuba and North West India. He also combined his military duties with working as a war correspondent – earning substantial money for his reports on the fighting. In 1899, he resigned from the military and pursued his career as a war correspondent. He was in South Africa for the Boer War, and he became a minor celebrity for his role in taking part in a scouting patrol, getting captured and later escaping. He might have gained the Victoria Cross for his efforts, though officially he was a civilian at the time. Churchill returned to the UK in 1900 and successfully stood as a Conservative candidate for Oldham. After becoming an MP, Churchill began a lucrative speaking tour, where he could command a high price for his speeches.

After seeing relatively little action on the Western Front, he returned to London and sat on the opposition benches before joining Lloyd George's coalition government. In 1917, Churchill was made Minister of Munitions – a job requiring strong administrative skills to manage limited resources during the war. Churchill was considered an efficient and skilled minister. At the end of the First World War, Churchill was active in trying to support the

Russian white army – who were trying to resist the Communist forces which had gained control over the Soviet Union.

In 1924 Churchill was appointed as Chancellor of the Exchequer by Conservative PM Stanley Baldwin. Under advice from many economists, Churchill made the decision to return Britain to the Gold Standard at a pre-war level. But, this proved to be damaging to the economy and led to a period of deflation, high unemployment and low growth. Churchill later admitted this was his greatest domestic mistake.

The low growth and declining living standards contributed to the General Strike of 1926 – Churchill eagerly sought to break the strikers and defeat the trades unions. During this period he expressed admiration for Mussolini for being a strong leader. In the 1930s, his political eccentricities consigned him to the backbenches, where he was a vocal critic of appeasement and urged the government to re-arm. Churchill was often a lone voice in speaking about the growing danger of Hitler's Germany. He also opposed Indian Independence and was a staunch supporter of the Empire.

After an unsuccessful start to the Second World War, the Commons chose Churchill to lead the UK in a national coalition. Churchill was instrumental in insisting Britain keep fighting. He opposed the minority voices in the cabinet seeking to make any deal with Hitler. Churchill proved an adept war leader. His speeches became famous and proved an important rallying cry for a country which stood alone through the difficult years of 1940 and 1941. These early years saw the Battle of Britain and the Blitz – a period where invasion by Germany seemed likely.

“we shall defend our Island, whatever the cost may be, we shall fight on the beaches, we shall fight on the landing grounds, we shall fight in the fields and in the streets, we shall fight in the hills; we shall never surrender” “Let us therefore brace ourselves to our duties, and so bear ourselves that, if the British Empire and its Commonwealth last for a thousand years, men will still say, ‘This was their finest hour.’” It was Churchill who helped popularise the phrase ‘Iron Curtain’ after he saw the growing gulf between the Communist East and Western Europe. “A shadow has fallen upon the scenes so lately lighted by the Allied victory.... From Stettin in the Baltic to Trieste in the Adriatic an iron curtain has descended across the Continent.”

After winning the Second World War, Churchill was shocked to lose the 1945 general election to a resurgent Labour party. He was Leader of the Opposition from 1945-51. But, under the Conservatives, he returned to power in the 1950 election – accepting much of the post-war consensus and the end of the British Empire. Churchill served as PM from 1951-

55 before retiring from politics. In his last speech in the Commons in 1955-03-01, he ended with the words: “The day may dawn when fair play, love for one’s fellow men, respect for justice and freedom, will enable tormented generations to march forth triumphant from the hideous epoch in which we have to dwell. Meanwhile, never flinch, never weary, never despair.”

Churchill was awarded the Nobel Prize in Literature in 1953 “for his mastery of historical and biographical description as well as for brilliant oratory in defending exalted human values.” Towards the end of his life, Churchill became an accomplished artist, though he found the years of retirement difficult and suffered periods of depression.

Churchill died in his home at age 90, on the morning of Sunday 24 January 1965. His funeral was the largest state funeral in the world, up to that point in time.

Text 23. The world of professions. Choosing a career.

Choosing a career is one of the most important and tough decisions people will ever make in life. According to Confucius, “Find a job you love and you will never work a day in your life.” It is absolutely true. If you are passionate about your work, you have more chances to succeed.

Well, choosing a proper career is a conscious decision of a grown-up person, and it is essential to explore job options that match your interests, skills and knowledge. It is absolutely wrong to chase your parents’ dreams. If you are not interested to work in a field they want you do, always stand your ground. It is high time for you to decide for yourself what to do for living and to find your real calling. Moreover, when you make a choice, it is also important to get appropriate education that will give you all the necessary skills, knowledge and practical awareness.

Today there are a lot of job options to choose from out there. Anyway, the choice of professions depends on people’s individual abilities and talents. Some people have dreams of becoming a doctor and saving people’s lives, others like cooking and become master chefs. There are people, for instance, who like taking care of animals, and therefore become veterinary surgeons. Some people have a talent for painting and are not good at the other things. It is not difficult to guess that they become painters, designers or architects. All in all, today the most popular jobs are office clerks, policemen, teachers, waitresses, hairstylists, drivers and some others.

As far as I am concerned, I want to start my own business and open my own travel agency. I am too independent and enterprising to work for an employer. The idea of doing a nine-to-five job does not appeal me at all. One of the reasons I want to set up my own business or become self-employed is independence. To begin with, I can earn money working from home and spend more time with family and friends. Secondly, I can choose any work schedule that suits me best. Thirdly, if you are your own boss, you avoid the stressful daily commute and traffic jams. Furthermore, self-employed people tend to have an extended vacation. Finally, my success depends on me and my own decisions.

Some people think that getting a good salary is more important than having the job you really want. I am convinced that an enjoyable job equals a worthy salary. For instance, people can turn their hobby into a profitable business and earn decent money from home. Besides, people spend too much time at work and it is wrong to waste time on unpleasant things.

Text 24. Different types of modern Russian Art

The Oxford Dictionary by Hornby gives us the following definition of the notion “art”. “Art” is the creation or expression of what is beautiful, especially in visual form. Drawing, painting, sculpture, architecture, literature, music, ballet belong to the fine art”.

Really when something is extremely beautiful or has great cultural value, we say: “It’s art”. Art has always been occupation for the few, but has been admired by many. Art reflects feelings and emotions, brings delight and admiration, and makes life pure as it awakens our best hidden qualities. Speaking about art, we connect this notion with culture. According to the dictionary culture of a community or a nation includes all the arts, beliefs and social institutions characteristic of a community or a nation. We can speak about either material, or spiritual culture. Art is both. Russia is a country that can rightfully boast its artistic and cultural traditions; its art galleries attract huge crowds of tourists from all over the world. St. Petersburg is a precious stone in the crown of Russian cities. The Hermitage is famous all over the world for its valuable rare collections of canvases and other art objects covering a span of about seven hundreds years and comprising masterpieces of by Leonardo da Vinci, Titian, Raphael, Rembrandt, Rubens. The collections illustrate the art of Italy, Spain, Holland, Germany, France, Britain, Sweden. The West-European Department also includes a fine collection of European Sculpture. People come to admire the collections of tapestry, precious textiles, weapons, ivory, pottery, porcelain and furniture as well.

The Tretyakov Gallery in Moscow, the Russian Museum should be mentioned by all means. This picture gallery was founded by a Russian merchant and a connoisseur of art Pavel Tretyakov in the 19th century. He was especially fond of the works of Peredvizhniki – the artists who belonged to the Society of Travelling Art Exhibitions such as Kramskoy, Perov, Ghe and other great Russian painters. The Tretyakov Gallery reflects the whole history of Russian Art. It has a rich collection of early Russian painting including famous icon. The world famous “The Trinity” by Andrey Rublev is exhibited in the gallery.

Speaking about art one should not forget about music, especially classic music. Outstanding Russian composers make all the world admire their music. One can find a man, who does not know Pyotr Ilyich Tchaikovsky, Michail Glinka, Nicholaj Rimsky-Korsakov – the prominent composers of 19th century, and Sergei Rachmaninov, Sergei Prokofiev and Dmitriy Shostakovich. It was Glinka who laid the foundation for modern Russian music, his music expressed the temperament of Russian people. His two best known operas “Ivan Susanin” and “Ruslan and Ludmila” were based on Russian folklore and historical legends.

The most famous ballets “Swan Lake”, “The Sleeping Beauty”, “The Nutcracker” and not less famous operas “The Queen of Spades”, “Eugenij Onegin” are still excellently staged and performed not only in Russian but in many greatest theatres in the world.

Russia is world famous for its literature. The “golden age” of Russian literature began in the 19th century when such outstanding masters of letters such as Pushkin, Lermontov, Gogol, Turgenev, Dostoevsky created their immortal masterpieces. Alexander Pushkin, the father of Russian Literature was the author of more than 700 lyrical poems. He wrote also the volumes of dramatic works, short stories, made adaptations of Russian fairy-tales.

Russia is famous for its architecture. The real jewel of architecture is the Moscow Kremlin with its cathedrals, towers and red brick walls. Just outside the Kremlin walls stands St. Basil`s Cathedral, one of the world most astonishing buildings with 8 domes of different designs and colors. St. Petersburg has great number of real masterpieces of architecture of different styles and is definitely worth visiting and being admired. Russia is also rich in young talents, forming new Russian culture. They appeared on the basis of the old one, but their essence is new. We can hear new voices in music and poetry, see new canvases of modern artists, watch great actors. All of them will make their contribution into Russian Culture and Art.

Text 25. Foreign Languages in the Life of an Educated Person

Today it is quite evident that everyone should know at least one foreign language. Knowing one or more foreign languages makes it possible to get acquainted with different ways of thinking, to understand a new civilization. Learning a foreign language stimulates mental abilities and gives you a chance to appreciate a new literature, a different culture and to broaden your horizons. Besides, knowing foreign languages has a practical value. It makes it easier to choose a profession and provides job promotion. It helps to improve the quality of your work, because it reduces the time lost on obtaining the necessary information. At present many professions, such as a pilot, a doctor, an engineer, a cosmonaut and many others, require a working knowledge of at least one foreign language.

People all over the world speak almost 3,000 languages. Some languages are spoken by millions of people, others by only hundreds of them. The most wide-spread language in the

world is Chinese. 350 million people speak English as their first language. About the same number use it as a second language. Russian is also one of the most prevalent, *expressive* and rich languages in the world. 240 million people speak Russian nowadays.

Among the great number of languages that exist on our planet today there are some which stand out. Scientists distinguish 13 great languages. These are the languages that are spoken by no less than 50 per cent of people on the Earth. They are Chinese, English, Russian, Spanish, Hindi and Urdu, Indonesian, Arabic, Portuguese, Japanese, German, French, Italian.

A person who knows these languages can speak to and understand almost 2 thousand million people and doesn't suffer from the language barrier. To state the significance of this or that language one must take into consideration not only its prevalence but the quantity of printed production. For instance, the largest number of books is published in Russian including technical literature. The greatest number of press production is published in English. As far as books are concerned, the largest number of them is translated from English, Russian, French and German accordingly.

Today there are a lot of people in Europe and Asia who know several languages. A person who knows several languages is called a polyglot. They are not few. The name of Henrich Schlimann, a famous German archaeologist who discovered Troy is known all over the world. It took him two years to learn the first two foreign languages. Later on it took him several weeks to master another foreign language.

Among polyglots there are champions. Thus, Cardinal Mezzophanti who lived in the middle of the last century knew 100 languages. Professor Heestermann from Germany knew 132 languages. The more languages man knows, the easier is the way he masters a new one. As polyglots say it is difficult to begin. But when you start learning a third language «everything is going on swimmingly». It is within everyone's power to know, read and speak a foreign language. But one should regard learning a foreign language as a very important task. The knowledge of other languages is very useful, especially if you have to work abroad or if you must read foreign literature in the original. If you know the language of a foreign country, you can talk to it's people and understand what they are speaking about without anybody's help. The knowledge of foreign languages also helps young people of different countries to develop friendship.

As for me, I am learning English, because in the recent years it has become not only an international language, it is now a number one language in the world. Besides, English is becoming a lingua franca. It is used a great deal by businessmen from different countries, which don't have a common language, in order to do business. It is already a lingua franca at International conferences. Besides, every person who travels in Europe, Asia or Africa, even in South America gets around by using English. So English is becoming more and more the language for practical use.

English has become the world's most important language in politics, science, trade and cultural relations, aviation, international sport and pop music. It is nowadays second only to Chinese. It is the official language in 44 countries: the United Kingdom of Great Britain and Northern Ireland, the United States of America, Australia, New Zealand and others. It is used as one of the official languages in Canada, the Irish Republic. It is also spoken as a second language by many people in India, Pakistan and numerous countries in Africa, to say nothing of people all over the world who know English as a foreign language. From the British Isles English spread all over the world. 75 per cent of the world's mail is in English, 60 per cent of the world's radio stations broadcast in English and more than a half of the world's periodicals are printed in English.

It is known, different languages can come into fashion or go out of it. It is **generally** considered that the most fashionable language in the world nowadays is English. Spanish also becomes very popular. It is learnt nowadays more often than earlier. Oriental languages are also widespread today. Learning a foreign language has a practical value but the choice of a foreign language sometimes depends on a fashion, if under fashion we mean the demands of life and society. Thus, the knowledge of a foreign language today is a life necessity.

2 семестр. Тексты социокультурной направленности

Text 1 British Museum

The centre of the museum was redeveloped in 2001 to become the Great Court, surrounding the original Reading Room.

The British Museum is a museum dedicated to human history, art, and culture, located in the Bloomsbury area of London. Its permanent collection, numbering some 8 million works, is among the largest and most comprehensive in existence and originates from all continents, illustrating and documenting the story of human culture from its beginnings to the present.

The British Museum was established in 1753, largely based on the collections of the physician and scientist Sir Hans Sloane. The museum first opened to the public on 15

January 1759, in Montagu House in Bloomsbury, on the site of the current museum building. Its expansion over the following two and a half centuries was largely a result of an expanding British colonial footprint and has resulted in the creation of several branch institutions, the first being the British Museum (Natural History) in South Kensington in 1881. Some objects in the collection, most notably the Elgin Marbles from the Parthenon, are the objects of controversy and of calls for restitution to their countries of origin.

Until 1997, when the British Library (previously centred on the Round Reading Room) moved to a new site, the British Museum housed both a national museum of antiquities and a national library in the same building. The museum is a non-departmental public body sponsored by the Department for Culture, Media and Sport, and as with all other national museums in the United Kingdom it charges no admission fee, except for loan exhibitions. Neil MacGregor became director of the museum in August 2002, succeeding Robert G. W. Anderson. In April 2015, MacGregor announced that he would step-down as Director on 15 December. On 29 September 2015, the Board of Trustees confirmed Hartwig Fischer, who will assume his post in Spring 2016, as his successor.

Text 2. National Gallery

The National Gallery is an art museum in Trafalgar Square in the City of Westminster, in Central London. Founded in 1824, it houses a collection of over 2,300 paintings dating from the mid-13th century to 1900.[a] The Gallery is an exempt charity, and a non-departmental public body of the Department for Culture, Media and Sport. Its collection belongs to the public of the United Kingdom and entry to the main collection is free of charge. It is among the most visited art museums in the world, after the Musée du Louvre, the British Museum, and the Metropolitan Museum of Art.

Unlike comparable museums in continental Europe, the National Gallery was not formed by nationalising an existing royal or princely art collection. It came into being when the British government bought 38 paintings from the heirs of John Julius Angerstein, an insurance broker and patron of the arts, in 1824. After that initial purchase the Gallery was

shaped mainly by its early directors, notably Sir Charles Lock Eastlake, and by private donations, which comprise two-thirds of the collection. The resulting collection is small in size, compared with many European national galleries, but encyclopaedic in scope; most major developments in Western painting "from Giotto to Cézanne" are represented with important works. It used to be claimed that this was one of the few national galleries that had all its works on permanent exhibition, but this is no longer the case.

The present building, the third to house the National Gallery, was designed by William Wilkins from 1832 to 1838. Only the façade onto Trafalgar Square remains essentially unchanged from this time, as the building has been expanded piecemeal throughout its history. Wilkins's building was often criticised for the perceived weaknesses of its design and for its lack of space; the latter problem led to the establishment of the Tate Gallery for British art in 1897. The Sainsbury Wing, an extension to the west by Robert Venturi and Denise Scott Brown, is a notable example of Postmodernist architecture in Britain. The current Director of the National Gallery is Gabriele Finaldi.

Text 3 London Eye

The London Eye is a giant Ferris wheel on the South Bank of the River Thames in London. Also known as the Millennium Wheel, it has also been called by its owners the British Airways London Eye, then the Merlin Entertainments London Eye, then the EDF Energy London Eye. Since mid-January 2015, it has been known as the Coca-Cola London Eye, following an agreement signed in September 2014.

The structure is 443 feet (135 m) tall and the wheel has a diameter of 394 feet (120 m). When erected in 1999 it was the world's tallest Ferris wheel. Its height was surpassed by the 520 feet (158 m) tall Star of Nanchang in 2006, the 541 feet (165 m) tall Singapore Flyer in 2008, and the 550 feet (168 m) High Roller (Las Vegas) in 2014. Supported by an

A-frame on one side only, unlike the taller Nanchang and Singapore wheels, the Eye is described by its operators as "the world's tallest cantilevered observation wheel".

It is Europe's tallest Ferris wheel, and offered the highest public viewing point in London until it was superseded by the 804 feet (245 m) observation deck on the 72nd floor of The Shard, which opened to the public on 1 February 2013. It is the most popular paid tourist attraction in the United Kingdom with over 3.75 million visitors annually, and has made many appearances in popular culture.

The London Eye adjoins the western end of Jubilee Gardens (previously the site of the former Dome of Discovery), on the South Bank of the River Thames between Westminster Bridge and Hungerford Bridge, in the London Borough of Lambeth.

A predecessor to the London Eye, the Great Wheel, was built for the Empire of India Exhibition at Earls Court and opened to the public on 17 July 1895. Modelled on the original Chicago Ferris Wheel, it was 94 metres (308 ft) tall and 82.3 metres (270 ft) in diameter. It stayed in service until 1906, by which time its 40 cars (each with a capacity of 40 persons) had carried over 2.5 million passengers. The Great Wheel was demolished in 1907 following its last use at the Imperial Austrian Exhibition.

Text 4 Tower of London

The Tower of London, officially Her Majesty's Royal Palace and Fortress of the Tower of London, is a historic castle located on the north bank of the River Thames in central London. It lies within the London Borough of Tower Hamlets, separated from the eastern edge of the square mile of the City of London by the open space known as Tower Hill. It was founded towards the end of 1066 as part of the Norman Conquest of England. The White Tower, which gives the entire castle its name, was built by William the Conqueror in 1078, and was a resented symbol of oppression, inflicted upon London by the new ruling elite. The castle was used as a prison from 1100 (Ranulf Flambard) until 1952 (Kray twins),[2] although that was not its primary purpose. A grand palace early in its history, it

served as a royal residence. As a whole, the Tower is a complex of several buildings set within two concentric rings of defensive walls and a moat. There were several phases of expansion, mainly under Kings Richard the Lionheart, Henry III, and Edward I in the 12th and 13th centuries. The general layout established by the late 13th century remains despite later activity on the site.

The Tower of London has played a prominent role in English history. It was besieged several times and controlling it has been important to controlling the country. The Tower has served variously as an armoury, a treasury, a menagerie, the home of the Royal Mint, a public records office, and the home of the Crown Jewels of England. From the early 14th century until the reign of Charles II, a procession would be led from the Tower to Westminster Abbey on the coronation of a monarch. In the absence of the monarch, the Constable of the Tower is in charge of the castle. This was a powerful and trusted position in the medieval period. In the late 15th century the castle was the prison of the Princes in the Tower. Under the Tudors, the Tower became used less as a royal residence, and despite attempts to refortify and repair the castle its defences lagged behind developments to deal with artillery.

The peak period of the castle's use as a prison was the 16th and 17th centuries, when many figures who had fallen into disgrace, such as Elizabeth I before she became queen, were held within its walls. This use has led to the phrase "sent to the Tower". Despite its enduring reputation as a place of torture and death, popularised by 16th-century religious propagandists and 19th-century writers, only seven people were executed within the Tower before the World Wars of the 20th century. Executions were more commonly held on the notorious Tower Hill to the north of the castle, with 112 occurring there over a 400-year period. In the latter half of the 19th century, institutions such as the Royal Mint moved out of the castle to other locations, leaving many buildings empty. Anthony Salvin and John Taylor took the opportunity to restore the Tower to what was felt to be its medieval appearance, clearing out many of the vacant post-medieval structures. In the First and Second World Wars, the Tower was again used as a prison, and witnessed the executions of 12 men for espionage. After the Second World War, damage caused during the Blitz was repaired and the castle reopened to the public. Today the Tower of London is one of the country's most popular tourist attractions. Under the ceremonial charge of the Constable of the Tower, it is cared for by the charity Historic Royal Palaces and is protected as a World Heritage Site.

Text 5 Madame Tussauds

By 1835 Marie had settled down in Baker Street, London, and opened a museum. This part of the exhibition included victims of the French Revolution and newly created figures of murderers and other criminals. The name is often credited to a contributor to Punch in 1845, but Marie appears to have originated it herself, using it in advertising as early as 1843.

Other famous people were added to the exhibition, including Lord Nelson, and Sir Walter Scott. Some of the sculptures done by Marie Tussaud herself still exist. The gallery

originally contained some 400 different figures, but fire damage in 1925, coupled with German bombs in 1941, has rendered most of these older models defunct. The casts themselves have survived (allowing the historical waxworks to be remade), and these can be seen in the museum's history exhibit. The oldest figure on display is that of Madame du Barry. Other faces from the time of Tussaud include Robespierre and George III. In 1842, she made a self portrait which is now on display at the entrance of her museum. She died in her sleep on 15 April 1850.

By 1883 the restricted space and rising cost of the Baker Street site prompted her grandson (Joseph Randall) to commission the building at its current location on Marylebone Road. The new exhibition galleries were opened on 14 July 1884 and were a great success.[9] However, the building costs, falling so soon after buying out his cousin Louisa's half share in the business in 1881, meant the business was under-funded. A limited company was formed in 1888 to attract fresh capital but had to be dissolved after disagreements between the family shareholders, and in February 1889 Tussaud's was sold to a group of businessmen led by Edwin Josiah Poyser.[10] Edward White, an artist dismissed by the new owners to save money, allegedly sent a parcel bomb to John Theodore Tussaud in June 1889 in revenge. The first sculpture of a young Winston Churchill was made in 1908, with a total of ten made since.

The first overseas branch of Madame Tussauds was opened in Amsterdam in 1970.

Text 6. Shakespeare Theatre Company

The Shakespeare Theatre Company is a regional theatre company located in Washington, D.C. The theatre company focuses primarily on plays from the Shakespeare canon, but its seasons include works by other classic playwrights such as Euripides, Ibsen, Wilde, Shaw, Schiller, Coward and Tennessee Williams. The company manages and performs in the Harman Center for the Arts, consisting of the Lansburgh Theatre and Sidney Harman Hall. In cooperation with George Washington University, they run the Academy for Classical Acting.

The company is a member of the League of Resident Theatres.

The Folger Shakespeare Library on Capitol Hill includes a replica of an Elizabethan theatre, originally used for lectures and tours. In 1970 this space was transformed into a functioning playhouse, and soon Folger Theatre Group (later The Folger Theatre) was organized to perform in the space.

After years of discussion, Amherst College, administering body of the Folger Shakespeare Library, in 1986 withdrew financial support for the company. To save the company, concerned citizens led by R. Robert Linowes reincorporated it as the non-profit Shakespeare Theatre at the Folger, later hiring Michael Kahn as artistic director. The company continued to perform at the Folger for the next six years.

Changing its name to The Shakespeare Theatre, the troupe moved in 1992 to the Lansburgh Theatre, a newly built space in the original Lansburgh's Department Store building in the Penn Quarter. At the start of the 2005-6 season, it adopted the current name, Shakespeare Theatre Company. The company constructed another theatre, Sidney Harman Hall, which opened in 2007 in the lower part of an office building in the quarter, and the two theatres were joined to become the Harman Center for the Arts.

Meanwhile, after initially importing traveling shows from the Shenandoah Shakespeare Express the Folger Shakespeare Library developed a new Folger Theatre company to present plays in its Elizabethan replica.

Text 7 British Royal Family

At present the British royal family is headed by Queen Elizabeth. When the Queen was born on the 21st of April 1926, her grandfather, King George V, was on the throne and her uncle was his heir. The death of her grandfather and the abdication of her uncle brought her father to the throne as King George VI. As a child she studied constitutional history and law as well as art and music. In addition she learned to ride and acquired her enthusiasm for horses. As she grew older she began to take part in public life, making her first broadcast at the age of 14.

The marriage of the young Princess Elizabeth to Philip, Duke of Edinburgh took place in November 1947. She came to the throne after her father's death in 1952 and was crowned in Westminster Abbey in June 1953.

Among Queen Elizabeth's many duties are the regular visits she makes to foreign countries, and especially those of the Commonwealth, whose interests and welfare are very important to her.

The Queen's husband, Duke of Edinburgh, was born in 1926 and served in the Royal Navy. He takes a great deal of interest in industry, in the achievements of young people (he founded Duke of Edinburgh's Award Scheme in 1956) and in saving rare wild animals from extinction. The Queen's heir is Charles, Prince of Wales, who was born in 1948, married Lady Diana Spencer and has two children, Prince William and Prince Harry. The Prince of Wales is well-known as a keen promoter of British interests.

The Queen's other children are Princess Anne (born in 1950), Prince Andrew (born in 1960) and Prince Edward (born in 1964). Anne, Princess Royal, has acquired a reputation for being arrogant, but in recent years has become quite popular with the general public. The Queen is widely known for her interest in horses and horse-racing. She is now president of the Save the Children Fund, Chancellor of the University of London and carries out many public engagements.

Prince Andrew, Duke of York, served as a helicopter pilot in the Royal Navy. In 1986 he married Miss Sarah Ferguson (Fergie, for short) and has two daughters. Prince Edward is keen on the theatre. This interest began while he was at university. He quit the Royal Marines, and is now pursuing a career with a theatrical company.

The Queen Mother, the widow of the late King George VI, celebrated her one hundred birthday in 2000 and died in 2002.

Text 8 Agatha Christie

Agatha Christie is known all over the world as the Queen of Crime. She wrote 78 crime novels, 19 plays and 6 romantic novels under the name of Mary Westmacott. Her books have been translated into 103 foreign languages. She is the third best-selling author in the world (after Shakespeare and the Bible). Many of her novels and short stories have been filmed. *The Mousetrap*, her most famous play, is now the longest-running play in history.

Agatha Christie was born at Torquay, Devonshire. She was educated at home and took singing lessons in Paris. She began writing at the end of the First World War. Her first

novel, *The Mysterious Affair at Styles*, was published in 1920. That was the first appearance of Hercule Poirot, who became one of the most popular private detectives since Sherlock Holmes. This little Belgian with the egg-shaped head and the passion for order amazes everyone by his powerful intellect and is brilliant solutions to the most complicated crimes.

Agatha Christie became generally recognised in 1926, after the publishing of her novel *The Murder of Roger Ackroyd*. It's still considered her masterpiece. When Agatha Christie got tired of Hercule Poirot she invented Miss Marple, a deceptively mild old lady with her own method of investigation. Her last Poirot book, *Curtain*, appeared shortly before her death, and her last Miss Marple story, *Sleeping Murder*, and her autobiography were published after her death.

Agatha Christie's success with millions of readers lies in her ability to combine clever plots with excellent character drawing, and a keen sense of humour with great powers of observation. Her plots always mislead the reader and keep him in suspense. He cannot guess who the criminal is. Fortunately, evil is always conquered in her novels.

Agatha Christie's language is simple and good and it's pleasant to read her books in the original.

Text 9 Conan Doyle

Many years ago a young doctor began to write stories about a man who was a detective. Readers liked his stories because they were very interesting and the doctor decided to become a writer. The doctor was Conan Doyle and he wrote about Sherlock Holmes.

Conan Doyle wrote his first story about Sherlock Holmes in 1887. In this story the detective meets his friend Dr. Watson. Holmes and Watson lived at 221 B Baker Street in London.

Many discussions take place about where 221 B was. There is no house there now. But a large company has its office near the place. This company answers twenty or so letters which still come every week to Sherlock Holmes, 221 B Baker Street. Most come from the United States and many people ask if Mr. Holmes can help them with some problem.

The company answers saying that, "Mr. Sherlock Holmes is no longer working as a detective".

There is a pub in London called Sherlock Holmes. One of the rooms in the pub is Sherlock Holmes' room. It has many things the room in Conan Doyle's stories had - Holmes' hat, some letters written to Sherlock Holmes, chairs and tables like those described in the stories. Besides, there are some pictures of Holmes and Conan Doyle, of actors who played Holmes and Watson in films, on television and radio.

In 1961 lovers of Sherlock Holmes formed the Sherlock Holmes Society. They meet three or four times a year to talk about Sherlock Holmes. The members of the Society know the stories about Sherlock Holmes very well, and they discuss these stories at their meetings.

Text 10 Diana - the People's Princess

Diana Spencer was born on the first of July 1961 in Sandringham in England. She had two older sisters and a younger brother. In childhood she liked games, swimming, running and dancing. She wanted to become a dancer. Besides she loved children very much and at the age of sixteen she worked in schools for very young children.

Diana became princess, when Prince Charles, the Queen's son, asked her to be his wife and they got married. They seemed to be a happy couple at first. They had two sons. They

travelled a lot they worked a lot, they visited many countries together. But Diana was not quite happy because they did different things and Charles didn't understand her.

Why was Diana the most famous, the most beautiful, the most photographed woman in the world? Why did she win the hearts of millions and millions of people in many countries? Why did so many people come to London to remember her when she died? Why did the car accident which took her life, become such a total shock to crowds of people? Why did people feel the need to be in London at the funeral? Why did the tears and love at the funeral move the world?

The answer is so simple. Matthew Wall, a student at St. Michael's College in Burlington said: She was such a lovely lady. She did so much for those people less fortunate than herself.

She was a kind woman. Hundreds of people talked about Diana's kindnesses. She liked ordinary people, though she was rich and had many rich friends. Wherever she was, she was always ready to lend a hand. She was devoted to the sick and the poor. She visited hospitals for people with AIDS and for lepers and wasn't afraid to touch them, talk to them, listen to them. She worked on children's charities, and had teamed up with Hillary Clinton in an effort to ban landmines. And it's not only money, that she wanted to give people. She wanted to give them a part of her soul to make them happy because she was unhappy herself. She wanted to give them love, because she needed love herself.

Diana was seen many times in floods of tears, because of the pressures of her loveless 15-year marriage. It is not a secret that Diana was hounded and humiliated to the point of mental breakdown and was able to pull through only because she knew she had the love of the people to buoy her in her darkest hours.

She was, indeed, the People's Princess.

Text 11 Margaret Thatcher

Margaret Hilda Thatcher, Baroness Thatcher, LG, OM, PC, FRS (née Roberts; 13 October 1925 – 8 April 2013) was a British stateswoman and politician who was the Prime Minister of the United Kingdom from 1979 to 1990 and the Leader of the Conservative Party from 1975 to 1990. She was the longest-serving British Prime Minister of the 20th century and is currently the only woman to have held the office. A Soviet journalist dubbed her the

"Iron Lady", a nickname that became associated with her uncompromising politics and leadership style. As Prime Minister, she implemented policies that have come to be known as Thatcherism.

Originally a research chemist before becoming a barrister, Thatcher was elected Member of Parliament (MP) for Finchley in 1959. Edward Heath appointed her Secretary of State for Education and Science in his 1970 government. In 1975, Thatcher defeated Heath in the Conservative Party leadership election to become Leader of the Opposition and became the first woman to lead a major political party in the United Kingdom. She became Prime Minister after winning the 1979 general election.

On moving into 10 Downing Street, Thatcher introduced a series of political and economic initiatives intended to reverse high unemployment and Britain's struggles in the wake of the Winter of Discontent and an ongoing recession. Her political philosophy and economic policies emphasised deregulation (particularly of the financial sector), flexible labour markets, the privatisation of state-owned companies, and reducing the power and influence of trade unions. Thatcher's popularity during her first years in office waned amid recession and high unemployment, until the 1982 Falklands War and the recovering economy brought a resurgence of support, resulting in her re-election in 1983.

Thatcher was re-elected for a third term in 1987. During this period her support for a Community Charge (referred to as the "poll tax") was widely unpopular, and her views on the European Community were not shared by others in her Cabinet. She resigned as Prime Minister and party leader in November 1990, after Michael Heseltine launched a challenge to her leadership. After retiring from the Commons in 1992, she was given a life peerage as Baroness Thatcher, of Kesteven in the county of Lincolnshire, which entitled her to sit in the House of Lords. After a series of small strokes in 2002, she was advised to withdraw from public speaking. Despite this, she managed to deliver a eulogy to Ronald Reagan at his funeral in 2004. In 2013 she died of another stroke in London at the age of 87.

Text 12 A Brief History of Oxford city

Oxford was founded in the 9th century when Alfred the Great created a network of fortified towns called burhs across his kingdom. One of them was at Oxford. Oxford is first mentioned in 911 in the Anglo-Saxon Chronicle.

According to legend, Oxford University was founded in 872 when Alfred the Great happened to meet some monks there and had a scholarly debate that lasted several days. In

reality, it grew up in the 12th century when famous teachers began to lecture there and groups of students came to live and study in the town.

But Oxford was a fortress as well as a town. In the event of war with the Danes all the men from the area were to gather inside the burgh. However this strategy was not entirely successful. In 1009 the Danes burned Oxford. However Oxford was soon rebuilt. In 1013 the Danish king claimed the throne of England. He invaded England and went to Oxford. In 1018 a conference was held in Oxford to decide who would be the king of England.

By the time of the Norman Conquest, there were said to be about 1,000 houses in Oxford, which meant it probably had a population of around 5,000. By the standards of the time, it was a large and important town (even London only had about 18,000 inhabitants). Oxford was the 6th largest town in England. Oxford probably reached its zenith at that time. About 1072 the Normans built a castle at Oxford.

In the 12th and 13th centuries Oxford was a manufacturing town. It was noted for cloth and leather. But in the 14th and 15th centuries manufacturing declined. Oxford came to depend on the students. It became a town of brewers, butchers, bakers, tailors, shoemakers, coopers, carpenters and blacksmiths. In the later Middle Ages Oxford declined in importance.

In the 16th century Oxford declined further in terms of national importance, though it remained a fairly large town by the standards of the time. Oxford was economically dependent on the university. The students provided a large market for beer, food, clothes and other goods. From 1819 Oxford had gas street lighting. In the late 19th century a marmalade making industry began in Oxford. There was also a publishing industry and an iron foundry.

Oxford gained its first cinema in 1910. The fate of Oxford was changed in 1913 when a man named Morris began making cars in the city. In 1919 a radiator making company was formed.

Text 13 A Brief History of Cambridge

Cambridge was founded in 875 when the Danes conquered Eastern England. They created a fortified town called a burgh, from which the word borough derives. Cambridge was surrounded by a ditch and an earth rampart with a wooden palisade on top. However in

1010 Cambridge was burned by the Danes. That was an easy task when all the buildings were of wood.

By the 10th century Cambridge was also the administrative centre for the area and so it was a town of some importance, although it would seem tiny to us. By 1086 Cambridge probably had a population of about 2,000. By the standards of the time it was a medium sized town.

Later in the Middle Ages the population of Cambridge probably rose to about 3,000. In 1068 William the Conqueror visited Cambridge and ordered that a castle be built there. At first it was of wood but in the 12th century, it was rebuilt in stone.

The town of Cambridge was severely damaged by a fire in 1174. Fire was a constant hazard when most buildings were of wood with thatched roofs. Another fire raged in Cambridge in 1385.

In the Middle Ages Cambridge had a weekly market and by the early 13th century it also had a fair. In those days fairs were like markets but they were held only once a year for a period of a few days- People came from all over Eastern England at a Cambridge fair. Cambridge prospered because it was located on the river Cam. In Cambridge there was a leather industry. By the 15th century there was also a wool industry.

In 1728 it was estimated that the population of Cambridge was more than 6,000, 1,600 of whom were inhabitants of the university. By the standards of that time Cambridge was a big town. The first newspaper in Cambridge appeared in 1744. The first bank in Cambridge was opened in 1780. The railway reached Cambridge in 1845. It stimulated the growth of industry in Cambridge by connecting the town to a huge market in London. From the late 19th century a new industry of making scientific instruments grew up in Cambridge. Cambridge gained gas light in 1823.

From 1880 horse drawn trams ran in the streets of Cambridge. The first electricity was generated in Cambridge in 1893.

In the 20th century the university, while still important, did not dominate Cambridge. New industries of electronics grew up. Making surgical and scientific instruments was also important.

Text 14 English Meals

The English proverb says: every cook praises his own broth. One can not say English cookery is bad, but there is not a lot of variety in it in comparison with European cuisine.

The English are very particular about their meals. The usual meals in England are breakfast, lunch, tea and dinner.

Breakfast time is between seven and nine a.m. A traditional English breakfast is a very big meal. It consists of juice, porridge, a rasher or two of bacon and eggs, toast, butter, jam or marmalade, tea or coffee. Marmalade is made from oranges and jam is made from other fruit. Many people like to begin with porridge with milk or cream and sugar, but no good Scotsman ever puts sugar on it, because Scotland is the home of porridge. For a change you can have sausages, tomatoes, mushrooms, cold ham or perhaps fish.

But nowadays in spite of the fact that the English strictly keep to their meals many people just have cereal with milk and sugar or toast with jam or honey.

The two substantial meals of the day are lunch and dinner. Lunch is usually taken at one o'clock. For many people lunch is a quick meal. Office workers usually go to a cafe at this time. They take fish, poultry or cold meat (beef, mutton, veal and ham), boiled or fried potatoes and all sorts of salad. They may have a mutton chop or steak and chips, followed by biscuits and a cup of coffee. Some people like a glass of light beer with lunch. Pubs also serve good, cheap food. School children can have a hot meal at school. Some of them just bring a snack from home.

Tea is very popular among the English; it may almost be called their national drink. Tea is welcome in the morning, in the afternoon and in the evening. The English like it strong and fresh made. The English put one tea-spoonful of tea for each person. Tea means two things. It is a drink and a meal. Some people have afternoon tea, so called «high tea» with sandwiches, tomatoes and salad, a tin of apricots, pears or pineapples and cakes, and, of course a cup of tea. That is what they call good tea. It is a substantial meal.

Cream teas are also popular. Many visitors, who come to Britain, find English instant coffee disgusting. Dinner time is generally between six and eight p.m. The evening meal is the biggest and the main meal of the day. Very often the whole family eats together. They begin with soup, followed by fish, roast chicken, potatoes and vegetables, fruit and coffee.

On Sundays many families have a traditional lunch consisting of roast chicken, lamb or beef with salads, vegetables and gravy.

Text 15 Life of Youth in Britain

Young people from all walks of life are united according to their interests by the established youth organizations in Britain. These organizations develop because of the

contribution of both full-time and part-time youth workers and a great number of volunteers.

Outdoor pursuits involve anything from pony trekking to rock-climbing or canoeing and help young people go out from the confines of their home or their environment. Such pursuits nourish a spirit of self-reliance and help realize the importance of team-work under a good leadership. All the major youth organizations hold outdoor pursuits either by organizing special residential courses or by sending their members to take part in established courses or seminars in other cities and countries.

Local authorities and a number of multipurpose youth organizations provide the place for such activities as canoeing, sailing, rock-climbing, map reading, orienteering and cooking for survival; all of them encourage initiative and self-discipline.

Among providers of outdoor places are the Sports Council, the Outward-Bound Trust, the Ocean Youth Club, the Sail Training Association, and the Nautical Training Corps.

The Outward-Bound Trust is the longest established and most experienced organization in Britain based on outdoor pursuits, personal development, and training. It has five centres in the English Lake District, Wales, and Scotland. It operates in 38 other countries of the world. It has centres in Belgium, France, Germany, and the Netherlands. This organization is based on two simple principles: firstly, that everyone is capable of achieving more than he might imagine, and, secondly, that too few people have a real appreciation of what can be achieved by team-work and mutual support.

Young people participate in 'expedition courses' lasting 8, 12, or 20 days and involving adventurous journeys by land or sea. There are also 'specialist courses' for young people aged 17 and over to become involved in work with such groups as the homeless, the elderly, and the disabled.

Text 16 National Emblems of the United Kingdom

The United Kingdom (abbreviated from "The United Kingdom of Great Britain and Northern Ireland") is the political name of the country which consists of England, Scotland, Wales and Northern Ireland (sometimes known as Ulster).

Great Britain is the name of the island which is made up of England, Scotland, Wales, whereas the British Isles is the geographical name of all the islands off the north-west coast of the European continent. In everyday speech "Britain" is used to mean the United Kingdom.

The flag of the United Kingdom, known as the Union Jack, is made up of three crosses. The upright red cross on a white background is the cross of the 1st George, the patron saint of England. The white diagonal cross on a blue background is the cross of St. Andrew, the patron saint of Scotland, The red diagonal cross on a white background is the cross of St. Patrick, the patron saint of Ireland. The Welsh flag, called the Welsh dragon, represents a red dragon on a white and green background. St. George's Day falls on 23 April and is regarded as England's national day. On this day some patriotic Englishmen wear a rose pinned to their jackets'. A red rose is the national emblem of England from the time of the Wars of the Roses (15th century).

St. Andrew's Day (the 30th of November) is regarded as Scotland's national day. On this day some Scotsmen wear a thistle in their buttonhole. As a national emblem of Scotland, thistle apparently first used in the 15th century as a symbol of defence. The Order of the Thistle is one of the highest orders of knighthood. It was founded in 1687, and is mainly given to Scottish noblemen (limited to 16 in number). St. Patrick's Day (the 17th of March) is considered as a national day in Northern Ireland and an official bank holiday there. The national emblem of Ireland is shamrock. According to legend, it was the plant chosen by St. Patrick to illustrate the Christian doctrine of the Trinity to the Irish.

St. David's Day (the 1st of March) is the church festival of St. David, a 6th-century monk and bishop, the patron saint of Wales. The day is regarded as the national holiday of Wales, although it is not an official bank holiday. On this day, however, many Welshmen wear either a yellow daffodil or a leek pinned to their jackets, as both plants are traditionally regarded as national emblems of Wales.

In the Royal Arms three lions symbolize England, a lion rampant — Scotland, and a harp — Ireland. The whole is encircled and is supported by a lion and a unicorn.

Text 17 Historical Reference

In 383 the Roman legions began to leave Britain to fight in Gaul (France) against the Barbarian tribes who were invading the Roman Empire. By 407 there were not enough Roman soldiers to defend Britons from Picts and Scots, fierce tribes from the North.

The British chiefs asked Anglo-Saxon soldiers to come from Germany to help them.

Anglo-Saxons were strong and well trained, they defeated Picts and Scots, but when afterwards Britons asked to do it and stayed.

After about one hundred and fifty years of fighting Britons had either been forced to Wales or had become slaves.

Anglo-Saxons founded a lot of kingdoms: Kent, Essex, Wessex, Mercia, Northumbria.

In 789 more than three hundred years after the Anglo-Saxons had settled in Britain, the Vikings began to attack the British Isles. They came from Norway, Sweden and Denmark. The winters there were long and cold and soil was poor, so Britain was a rich prize for them. They made a big army. The Anglo-Saxon kingdoms couldn't resist the Vikings, and soon only the kingdom of Wessex remained free of them – the King of Wessex was Alfred the Great. King Alfred the Great was one of the first kings of England. He was a great and kind king. He did so much that was good for the people of England that people called him Alfred the Good.

In the time of Alfred the Great not many men or women could read or write. Alfred could read and write well. He wanted his people to have schools where they could learn to read and write. While he was king, many people went to school for the first time their lives.

Alfred was a brave man as well as a good one. While he was king, the Danes came in their boats to England and fought their way up the rivers. They wanted to live in England and make it their own country. Alfred and his people fought hard because they did not want to give up their country to the Danes.

King Alfred and the Vikings made a treaty. They agreed that the Vikings would live in an area called the Danelaw, where they could follow their traditions and obey their law. So the vikings settled in England and mixed with Anglo-Saxons. The process wasn't very painful as these two nations were very much alike and had similar languages. But more and more Vikings were coming from the continent and by 1020 King Sweyn of Denmark became the first Danish King of England.

Text 18 A View on Entertainment in Britain

BRIAN CARTER, a student, is not happy with entertainment in Britain. "British audiences can be interminably irritating with their frequently snobby, haughty and smug attitudes"

It is perhaps ironic that it should be possible to write about what is irritating and loathsome about entertainment in Britain; entertainment is supposed to be diverting and enjoyable but this is decidedly not always the case.

Take the cinema... To see a film you have either to go to one of the huge multiplexes that has sprung up on the outskirts of towns over the last couple of years or to stick to the high street movie theatres which have either remained unchanged and poorly maintained since Charlie Chaplin's heyday or are old dance halls or bingo palaces converted to cinemas sometime around 1952 when orange and brown were apparently considered the quickest route to tasteful interior decoration: they are all ugly and dilapidated with moth-eaten, creaky and cramped seats. A visit to the multiplex is a little more enjoyable, because at least these cinemas usually have hot dogs.

The British seem not to have grasped the concept of what is and what is not appropriate snack-food for the cinema. The whole point about popcorn is that it doesn't crinkle in a wrapper and it doesn't crunch in your mouth. In Britain, though, cinemas sell crisps and candy in plastic wrappings. Little is more frustrating than trying to concentrate on the screen when you are sitting next to Mr and Mrs Greedy with Junior Greedies stuffing their faces with crunchy food from crinkly wrappers, saliva drooling slowly down their chins.

The theatre is little better. Although Britain has a theatrical tradition that is richer and more varied than almost any country in the world (this is, after all, the nation that has produced Shakespeare, Laurence Olivier and a sector of London — the West End — packed with more theatres and original productions than you could wish for), British audiences can be interminably irritating with their frequently snobby and smug attitudes. Worst of all are the regulars of the Royal Shakespeare Company who derive immense pleasure from spotting — or pretending to spot — the most intellectual of puns (plays on words) or witty quips. They then laugh ostentatiously in a theatrical manner to show the surrounding audience that they, and only they, have the intelligence to understand the true meaning of the play that they are watching. You can always spot these characters because they glance discreetly around themselves a few seconds after they have finished laughing to check that their neighbours have noticed them.

Text 19 Education in Great Britain: Higher Education

For seven hundred years Oxford and Cambridge universities dominated the British education. Scotland had four universities, all founded before A. D. 1600. Wales only acquired a university in the 20th century; it consisted of four university colleges located in different cities (Cardiff, Swansea, Bangor, and Aberystwith). The first English university after Oxford and Cambridge (sometimes referred to as Oxbridge) was Durham, in the North of England, founded in 1832. The University of London was founded a few years later in 1836.

During the nineteenth century institutions of higher education were founded in most of the biggest industrial towns, like Birmingham, Manchester, Leeds, Sheffield (sometimes called the Redbrick Universities). At first they did not have full university status but were known as university colleges; since 1945, however, all have become independent universities, and in recent years a number of other universities have been founded: Sussex, Essex, Warwick, and others.

In the middle 60s there was a further new development. Some of the local technical colleges maintained by local authorities had gained special prestige. By 1967 ten of these had been given charters as universities. Many of them are in the biggest cities where there were already established universities; so now we have the University of Aston (Birmingham), Salford (close to Manchester), Strathclyde (Glasgow), Herriot-Watt University (Edinburgh), Brunel University (London). When we add all these together we find that the number of universities in England increased within ten years from nineteen to thirty-six, and in Scotland from four to eight.

Oxford university is a federation of colleges, and it is impossible to understand its structure unless one first understands the nature and function of these colleges, which have no resemblance whatever with the institutions called "colleges" in America. Oxford has twenty-three ordinary colleges for men, five for women. All these are parallel institutions, and none of them is connected with any particular field of study. No matter what subject a student proposes to study he may study at any of the men's colleges.

Each college has a physical existence in the shape of a dining-hall, chapel, and residential rooms (enough to accommodate about half the student membership, the rest living in lodgings in the town). It is governed by its Fellows (commonly called "dons"), of whom there are usually about twenty or thirty. The dons are also responsible for teaching the students of the college through the tutorial system. The Fellows elect the Head of the college (whose title varies from college to college).

Text 20 Democracy in Great Britain

Great Britain is one of the biggest and highly developed countries in the world. Britain's democratic system of government is long established and well tried, and has provided a remarkable political stability. Britain's overseas relations including its membership in the European Economic Community and its links with Commonwealth countries, enable it to realize international cooperation.

Great Britain has diplomatic relations with 166 countries, bears the responsibility for 14 independent territories, provides assistance to over 120 developing countries and is a member of some international organizations. It is one of the five permanent members of the UNO Security Council. Great Britain is a member of the European Economic Community. The Community defines its aims as the harmonious development of economic activities. It has abolished internal tariffs, established common custom tariffs, and set a goal of the creation of an internal market in which free movement of goods, services, persons, and capital would be ensured in accordance with the Treaty of Rome.

By the middle of 2000 Britain had adopted more laws regulating the activity in the internal market than any other Community member. The Community now accounts for a fifth of world trade. Half Britain's trade is with its eleven Community partners.

Great Britain takes an active part in the work of the Commonwealth, which is a voluntary association of 50 independent states. The English Queen is recognized as Head of the Commonwealth.

Great Britain promotes sustainable economic and social progress in developing countries. Almost £65 million were spent on disaster relief, help for refugees and emergency humanitarian aid.

Britain's defence policy is based on its membership in NATO, which is committed to defend the territories of all its states-members.

Text 21 Unwritten Rules of Great Britain

Good and bad manners make up the social rules of a country. They are not always easy to learn because they are often not written down in books. For example, British women didn't go into pubs at the beginning of this century because it was not considered respectable behaviour for a woman. Now both women and men drink freely in pubs and women are fully integrated into public life. Visitors to Britain are often surprised by the strange behaviour of the inhabitants. One of the worst mistakes is to get on a bus without waiting your turn in the queue. The other people in the queue will probably complain loudly! Queuing is a national habit and it is considered polite or good manners to wait for your turn.

In some countries it is considered bad manners to eat in the street, whereas in Britain it is common to see people having a snack whilst walking down the road, especially at lunchtime. Britons may be surprised to see young children in restaurants in the evening because children are not usually taken out to restaurants late at night. And if they make a noise in public or in a restaurant it is considered very rude. In recent years children are playing a more active role and they are now accepted in many pubs and restaurants.

In recent years smoking has received a lot of bad publicity, and fewer British people now smoke. Many companies have banned smoking from their offices and canteens. Smoking is now banned on the London Underground, in cinemas and theaters and most buses. It's becoming less and less acceptable to smoke in a public place. It is considered rude or bad manners to smoke in someone's house without permission. Social rules are an important part of our culture as they passed down through history. The British have an expression for following these "unwritten rules": "When in Rome, do as the Romans do".

Text 22 Palace of Westminster

The Palace of Westminster is the meeting place of the House of Commons and the House of Lords, the two houses of the Parliament of the United Kingdom. Commonly known as the Houses of Parliament after its occupants, it is also known as the 'heart of British politics'. The Palace lies on the northern bank of the River Thames in the City of Westminster, in central London. Its name, which derives from the neighbouring Westminster Abbey, may refer to either of two structures: the Old Palace, a medieval building complex that was destroyed by fire in 1834, and its replacement, the New Palace that stands today. For ceremonial purposes, the palace retains its original style and status as a royal residence and is the property of the Crown.

The first royal palace was built on the site in the eleventh century, and Westminster was the primary residence of the Kings of England until a fire destroyed much of the complex in 1512. After that, it served as the home of the Parliament of England, which had been meeting there since the thirteenth century, and also as the seat of the Royal Courts of Justice, based in and around Westminster Hall. In 1834, an even greater fire ravaged the heavily rebuilt Houses of Parliament, and the only medieval structures of significance to survive were Westminster Hall, the Cloisters of St Stephen's, the Chapel of St Mary Undercroft, and the Jewel Tower.

The subsequent competition for the reconstruction of the Palace was won by the architect Charles Barry, whose design was for new buildings in the Gothic Revival style, specifically inspired by the English Perpendicular Gothic style of the 14th-16th centuries. The remains of the Old Palace (with the exception of the detached Jewel Tower) were incorporated into its much larger replacement, which contains over 1,100 rooms organised symmetrically around two series of courtyards. Part of the New Palace's area of 3.24 hectares (8 acres) was reclaimed from the Thames, which is the setting of its principal 266-metre (873 ft) façade, called the River Front. Barry was assisted by Augustus W. N. Pugin, a leading authority on Gothic architecture and style, who provided designs for the decorations and furnishings of the Palace. Construction started in 1840 and lasted for thirty years, suffering great delays and cost overruns, as well as the death of both leading architects; works for the interior decoration continued intermittently well into the twentieth century. Major conservation work has been carried out since, to reverse the effects of London's air pollution, and extensive repairs took place after the Second World War, including the reconstruction of the Commons Chamber following its bombing in 1941.

Text 23 Rail transport in Great Britain

The railway system in Great Britain is the oldest in the world: the world's first locomotive-hauled public railway opened in 1825. Most of the railway track is managed by Network Rail, which in 2015 had a network of 15,760 kilometres (9,790 mi) of standard-gauge lines, of which 5,272 kilometres (3,276 mi) were electrified. These lines range from single to quadruple track or more. In addition, some cities have separate rail-based mass transit systems (including the extensive and historic London Underground). There are also several private railways (some of them narrow-gauge), which are primarily short tourist lines. The British railway network is connected with that of continental Europe by an undersea rail link, the Channel Tunnel, opened in 1994.

The United Kingdom is a member of the International Union of Railways (UIC). The UIC Country Code for United Kingdom is 70. The UK has the 18th largest railway network in the world; despite many lines having closed in the 20th century it remains one of the densest rail networks. It is one of the busiest railways in Europe, with 20% more train services than France, 60% more than Italy, and more than Spain, Switzerland, The Netherlands, Portugal and Norway combined, as well as representing more than 20% of all passenger journeys in Europe.

In 2014, there were 1.65 billion journeys on the National Rail network, making the British network the fifth most used in the world (Great Britain ranks 23rd in world population). Unlike a number of other countries, rail travel in the United Kingdom has enjoyed a renaissance in recent years, with passenger numbers reaching their highest ever level (see usage figures below). This has coincided with the privatisation of British Rail, but the effect of this is disputed. The growth is partly attributed to a shift away from private motoring due to growing road congestion and increasing petrol prices, but also to the overall increase in travel due to affluence. However passenger journeys have grown much more quickly than in comparable countries such as France and Germany.

To cope with increasing passenger numbers, there is a large ongoing programme of upgrades to the network, including Thameslink, Crossrail, electrification of lines, in-cab signalling, new inter-city trains and a new high-speed line.

Text 24 Tea in Britain

Tea, that most quintessential of English drinks, is a relative latecomer to British shores. Although the custom of drinking tea dates back to the third millennium BC in China, it was not until the mid 17th century that the beverage first appeared in England.

The use of tea spread slowly from its Asian homeland, reaching Europe by way of Venice around 1560, although Portuguese trading ships may have made contact with the Chinese as early as 1515.

It was the Portuguese and Dutch traders who first imported tea to Europe, with regular shipments by 1610. England was a latecomer to the tea trade, as the East India Company did not capitalize on tea's popularity until the mid-18th century.

Coffee Houses

Curiously, it was the London coffee houses that were responsible for introducing tea to England. One of the first coffee house merchants to offer tea was Thomas Garway, who owned an establishment in Exchange Alley. He sold both liquid and dry tea to the public as early as 1657. Three years later he issued a broadsheet advertising tea at £6 and £10 per pound (ouch!), touting its virtues at "making the body active and lusty", and "preserving perfect health until extreme old age".

Tea gained popularity quickly in the coffee houses, and by 1700 over 500 coffee houses sold it. This distressed the tavern owners, as tea cut their sales of ale and gin, and it was bad news for the government, who depended upon a steady stream of revenue from taxes on liquor sales. By 1750 tea had become the favoured drink of Britain's lower classes.

Taxation on Tea

Charles II did his bit to counter the growth of tea, with several acts forbidding its sale in private houses. This measure was designed to counter sedition, but it was so unpopular that it was impossible to enforce. A 1676 act taxed tea and required coffee house operators to apply for a license.

This was just the start of government attempts to control, or at least, to profit from the popularity of tea in Britain. By the mid 18th century the duty on tea had reached an absurd 119%. This heavy taxation had the effect of creating a whole new industry - tea smuggling.

Text 25 So is English the International Language?

If an international language exists today, it is inarguably English. Not only is it the default language of international business, it has integrated itself into many languages through loanwords. Loanwords span from “Internet” to common phrases like “Ok”. There are more than 350 million people that claim English as their native language, and 430 million more people speak it as their second language. English speakers are found in every corner of the world, so it’s hard to ignore its status as an international language.

English is a West Germanic language that spans the globe, from the United States to New Zealand. It’s estimated that there are around 2 billion English speakers of varying nationalities spread throughout the world. There are many varieties of English as well, ranging from British to South African English, each with their own idiosyncrasies.

Just as English has loaned words out to other languages, other languages have loaned their words out to English as well. The English language gains words like “ballet” from French, “kindergarten” from German, “patio” from Spanish, “tsunami” from Japanese, and “moped” from Swedish. It can be assumed that, as English spreads throughout the world, it will continue to gain new vocabulary from other languages. Similarly, other languages will continue to gain new vocabulary from English.

How did English Become the International Language of the World?

So what accounts for the rise of English? The English language has a bit of a sordid past, originally spreading from the reign of the British Empire.

It has been thriving on what many call ‘cultural imperialism’ since then, with the rise of the communication age easing the spread of the language. As with many things, the number of speakers of a language depends heavily on the political power of its native speakers. If there’s anything the British Empire had some 300 years ago, it was political power. This has made English an official language in 50+ countries worldwide.

Since the British Empire, English has continued to expand through its native speakers, who span the globe from the United States to Australia. As English speakers grow in number, the number of people who want to learn an increasingly useful language will also grow.

Text 1 British Museum

The centre of the museum was redeveloped in 2001 to become the Great Court, surrounding the original Reading Room.

The British Museum is a museum dedicated to human history, art, and culture, located in the Bloomsbury area of London. Its permanent collection, numbering some 8 million works, is among the largest and most comprehensive in existence and originates from all continents, illustrating and documenting the story of human culture from its beginnings to the present.

The British Museum was established in 1753, largely based on the collections of the physician and scientist Sir Hans Sloane. The museum first opened to the public on 15 January 1759, in Montagu House in Bloomsbury, on the site of the current museum building. Its expansion over the following two and a half centuries was largely a result of an expanding British colonial footprint and has resulted in the creation of several branch institutions, the first being the British Museum (Natural History) in South Kensington in 1881. Some objects in the collection, most notably the Elgin Marbles from the Parthenon, are the objects of controversy and of calls for restitution to their countries of origin.

Until 1997, when the British Library (previously centred on the Round Reading Room) moved to a new site, the British Museum housed both a national museum of antiquities and a national library in the same building. The museum is a non-departmental public body sponsored by the Department for Culture, Media and Sport, and as with all other national museums in the United Kingdom it charges no admission fee, except for loan exhibitions. Neil MacGregor became director of the museum in August 2002, succeeding Robert G. W. Anderson. In April 2015, MacGregor announced that he would step-down as Director on 15 December. On 29 September 2015, the Board of Trustees confirmed Hartwig Fischer, who will assume his post in Spring 2016, as his successor.

Text 2. National Gallery

The National Gallery is an art museum in Trafalgar Square in the City of Westminster, in Central London. Founded in 1824, it houses a collection of over 2,300 paintings dating from the mid-13th century to 1900.[a] The Gallery is an exempt charity, and a non-departmental public body of the Department for Culture, Media and Sport. Its collection belongs to the public of the United Kingdom and entry to the main collection is free of charge. It is among the most visited art museums in the world, after the Musée du Louvre, the British Museum, and the Metropolitan Museum of Art.

Unlike comparable museums in continental Europe, the National Gallery was not formed by nationalising an existing royal or princely art collection. It came into being when the British government bought 38 paintings from the heirs of John Julius Angerstein, an insurance broker and patron of the arts, in 1824. After that initial purchase the Gallery was shaped mainly by its early directors, notably Sir Charles Lock Eastlake, and by private donations, which comprise two-thirds of the collection. The resulting collection is small in size, compared with many European national galleries, but encyclopaedic in scope; most major developments in Western painting "from Giotto to Cézanne" are represented with important works. It used to be claimed that this was one of the few national galleries that had all its works on permanent exhibition, but this is no longer the case.

The present building, the third to house the National Gallery, was designed by William Wilkins from 1832 to 1838. Only the façade onto Trafalgar Square remains essentially unchanged from this time, as the building has been expanded piecemeal throughout its history. Wilkins's building was often criticised for the perceived weaknesses of its design and for its lack of space; the latter problem led to the establishment of the Tate Gallery for British art in 1897. The Sainsbury Wing, an extension to the west by Robert Venturi and Denise Scott Brown, is a notable example of Postmodernist architecture in Britain. The current Director of the National Gallery is Gabriele Finaldi.

Text 3 London Eye

The London Eye is a giant Ferris wheel on the South Bank of the River Thames in London. Also known as the Millennium Wheel, it has also been called by its owners the British Airways London Eye, then the Merlin Entertainments London Eye, then the EDF Energy London Eye. Since mid-January 2015, it has been known as the Coca-Cola London Eye, following an agreement signed in September 2014.

The structure is 443 feet (135 m) tall and the wheel has a diameter of 394 feet (120 m). When erected in 1999 it was the world's tallest Ferris wheel. Its height was surpassed by the 520 feet (158 m) tall Star of Nanchang in 2006, the 541 feet (165 m) tall Singapore Flyer in 2008, and the 550 feet (168 m) High Roller (Las Vegas) in 2014. Supported by an A-frame on one side only, unlike the taller Nanchang and Singapore wheels, the Eye is described by its operators as "the world's tallest cantilevered observation wheel".

It is Europe's tallest Ferris wheel, and offered the highest public viewing point in London until it was superseded by the 804 feet (245 m) observation deck on the 72nd floor of The Shard, which opened to the public on 1 February 2013. It is the most popular paid tourist attraction in the United Kingdom with over 3.75 million visitors annually, and has made many appearances in popular culture.

The London Eye adjoins the western end of Jubilee Gardens (previously the site of the former Dome of Discovery), on the South Bank of the River Thames between Westminster Bridge and Hungerford Bridge, in the London Borough of Lambeth.

A predecessor to the London Eye, the Great Wheel, was built for the Empire of India Exhibition at Earls Court and opened to the public on 17 July 1895. Modelled on the original Chicago Ferris Wheel, it was 94 metres (308 ft) tall and 82.3 metres (270 ft) in diameter. It stayed in service until 1906, by which time its 40 cars (each with a capacity of 40 persons) had carried over 2.5 million passengers. The Great Wheel was demolished in 1907 following its last use at the Imperial Austrian Exhibition.

Text 4 Tower of London

The Tower of London, officially Her Majesty's Royal Palace and Fortress of the Tower of London, is a historic castle located on the north bank of the River Thames in central London. It lies within the London Borough of Tower Hamlets, separated from the eastern edge of the square mile of the City of London by the open space known as Tower Hill. It was founded towards the end of 1066 as part of the Norman Conquest of England. The White Tower, which gives the entire castle its name, was built by William the Conqueror in 1078, and was a resented symbol of oppression, inflicted upon London by the new ruling elite. The castle was used as a prison from 1100 (Ranulf Flambard) until 1952 (Kray twins),[2] although that was not its primary purpose. A grand palace early in its history, it served as a royal residence. As a whole, the Tower is a complex of several buildings set within two concentric rings of defensive walls and a moat. There were several phases of expansion, mainly under Kings Richard the Lionheart, Henry III, and Edward I in the 12th and 13th centuries. The general layout established by the late 13th century remains despite later activity on the site.

The Tower of London has played a prominent role in English history. It was besieged several times and controlling it has been important to controlling the country. The Tower has served variously as an armoury, a treasury, a menagerie, the home of the Royal Mint, a public records office, and the home of the Crown Jewels of England. From the early 14th century until the reign of Charles II, a procession would be led from the Tower to Westminster Abbey on the coronation of a monarch. In the absence of the monarch, the Constable of the Tower is in charge of the castle. This was a powerful and trusted position in the medieval period. In the late 15th century the castle was the prison of the Princes in the Tower. Under the Tudors, the Tower became used less as a royal residence, and despite attempts to refortify and repair the castle its defences lagged behind developments to deal with artillery.

The peak period of the castle's use as a prison was the 16th and 17th centuries, when many figures who had fallen into disgrace, such as Elizabeth I before she became queen, were held within its walls. This use has led to the phrase "sent to the Tower". Despite its enduring reputation as a place of torture and death, popularised by 16th-century religious propagandists and 19th-century writers, only seven people were executed within the Tower before the World Wars of the 20th century. Executions were more commonly held on the notorious Tower Hill to the north of the castle, with 112 occurring there over a 400-year period. In the latter half of the 19th century, institutions such as the Royal Mint moved out of the castle to other locations, leaving many buildings empty. Anthony Salvin and John Taylor took the opportunity to restore the Tower to what was felt to be its medieval appearance, clearing out many of the vacant post-medieval structures. In the First and Second World Wars, the Tower was again used as a prison, and witnessed the executions of 12 men for espionage. After the Second World War, damage caused during the Blitz was repaired and the castle reopened to the public. Today the Tower of London is one of the country's most popular tourist attractions. Under the ceremonial charge of the Constable of the Tower, it is cared for by the charity Historic Royal Palaces and is protected as a World Heritage Site.

Text 5 Madame Tussauds

By 1835 Marie had settled down in Baker Street, London, and opened a museum. This part of the exhibition included victims of the French Revolution and newly created figures of murderers and other criminals. The name is often credited to a contributor to Punch in 1845, but Marie appears to have originated it herself, using it in advertising as early as 1843.

Other famous people were added to the exhibition, including Lord Nelson, and Sir Walter Scott. Some of the sculptures done by Marie Tussaud herself still exist. The gallery originally contained some 400 different figures, but fire damage in 1925, coupled with German bombs in 1941, has rendered most of these older models defunct. The casts themselves have survived (allowing the historical waxworks to be remade), and these can be seen in the museum's history exhibit. The oldest figure on display is that of Madame du Barry. Other faces from the time of Tussaud include Robespierre and George III. In 1842, she made a self portrait which is now on display at the entrance of her museum. She died in her sleep on 15 April 1850.

By 1883 the restricted space and rising cost of the Baker Street site prompted her grandson (Joseph Randall) to commission the building at its current location on Marylebone Road. The new exhibition galleries were opened on 14 July 1884 and were a great success.[9] However, the building costs, falling so soon after buying out his cousin Louisa's half share in the business in 1881, meant the business was under-funded. A limited company was formed in 1888 to attract fresh capital but had to be dissolved after disagreements between the family shareholders, and in February 1889 Tussaud's was sold to a group of businessmen led by Edwin Josiah Poyser.[10] Edward White, an artist dismissed by the new owners to save money, allegedly sent a parcel bomb to John Theodore Tussaud in June 1889 in revenge. The first sculpture of a young Winston Churchill was made in 1908, with a total of ten made since.

The first overseas branch of Madame Tussauds was opened in Amsterdam in 1970.

Text 6. Shakespeare Theatre Company

The Shakespeare Theatre Company is a regional theatre company located in Washington, D.C. The theatre company focuses primarily on plays from the Shakespeare canon, but its

seasons include works by other classic playwrights such as Euripides, Ibsen, Wilde, Shaw, Schiller, Coward and Tennessee Williams. The company manages and performs in the Harman Center for the Arts, consisting of the Lansburgh Theatre and Sidney Harman Hall. In cooperation with George Washington University, they run the Academy for Classical Acting.

The company is a member of the League of Resident Theatres.

The Folger Shakespeare Library on Capitol Hill includes a replica of an Elizabethan theatre, originally used for lectures and tours. In 1970 this space was transformed into a functioning playhouse, and soon Folger Theatre Group (later The Folger Theatre) was organized to perform in the space.

After years of discussion, Amherst College, administering body of the Folger Shakespeare Library, in 1986 withdrew financial support for the company. To save the company, concerned citizens led by R. Robert Linowes reincorporated it as the non-profit Shakespeare Theatre at the Folger, later hiring Michael Kahn as artistic director. The company continued to perform at the Folger for the next six years.

Changing its name to The Shakespeare Theatre, the troupe moved in 1992 to the Lansburgh Theatre, a newly built space in the original Lansburgh's Department Store building in the Penn Quarter. At the start of the 2005-6 season, it adopted the current name, Shakespeare Theatre Company. The company constructed another theatre, Sidney Harman Hall, which opened in 2007 in the lower part of an office building in the quarter, and the two theatres were joined to become the Harman Center for the Arts.

Meanwhile, after initially importing traveling shows from the Shenandoah Shakespeare Express the Folger Shakespeare Library developed a new Folger Theatre company to present plays in its Elizabethan replica.

Text 7 British Royal Family

At present the British royal family is headed by Queen Elizabeth. When the Queen was born on the 21st of April 1926, her grandfather, King George V, was on the throne and her uncle was his heir. The death of her grandfather and the abdication of her uncle brought her father to the throne as King George VI.

As a child she studied constitutional history and law as well as art and music. In addition she learned to ride and acquired her enthusiasm for horses. As she grew older she began to take part in public life, making her first broadcast at the age of 14.

The marriage of the young Princess Elizabeth to Philip, Duke of Edinburgh took place in November 1947. She came to the throne after her father's death in 1952 and was crowned in Westminster Abbey in June 1953.

Among Queen Elizabeth's many duties are the regular visits she makes to foreign countries, and especially those of the Commonwealth, whose interests and welfare are very important to her.

The Queen's husband, Duke of Edinburgh, was born in 1926 and served in the Royal Navy. He takes a great deal of interest in industry, in the achievements of young people (he founded Duke of Edinburgh's Award Scheme in 1956) and in saving rare wild animals from extinction.

The Queen's heir is Charles, Prince of Wales, who was born in 1948, married Lady Diana Spencer and has two children, Prince William and Prince Harry. The Prince of Wales is well-known as a keen promoter of British interests.

The Queen's other children are Princess Anne (born in 1950), Prince Andrew (born in 1960) and Prince Edward (born in 1964). Anne, Princess Royal, has acquired a reputation for being arrogant, but in recent years has become quite popular with the general public.

The Queen is widely known for her interest in horses and horse-racing. She is now president of the Save the Children Fund, Chancellor of the University of London and carries out many public engagements.

Prince Andrew, Duke of York, served as a helicopter pilot in the Royal Navy. In 1986 he married Miss Sarah Ferguson (Fergie, for short) and has two daughters. Prince Edward is keen on the theatre. This interest began while he was at university. He quit the Royal Marines, and is now pursuing a career with a theatrical company.

The Queen Mother, the widow of the late King George VI, celebrated her one hundred birthday in 2000 and died in 2002.

Text 8 Agatha Christie

Agatha Christie is known all over the world as the Queen of Crime. She wrote 78 crime novels, 19 plays and 6 romantic novels under the name of Mary Westmacott. Her books have been translated into 103 foreign languages. She is the third best-selling author in the world (after Shakespeare and the Bible). Many of her novels and short stories have been filmed. The Mousetrap, her most famous play, is now the longest-running play in history.

Agatha Christie was born at Torquay, Devonshire. She was educated at home and took singing lessons in Paris. She began writing at the end of the First World War. Her, first novel, The Mysterious Affair at Styles, was published in 1920. That was the first appearance of Hercule Poirot, who became one of the most popular private detectives since

Sherlock Holmes. This little Belgian with the egg-shaped head and the passion for order amazes everyone by his powerful intellect and is brilliant solutions to the most complicated crimes.

Agatha Christie became generally recognised in 1926, after the publishing of her novel *The Murder of Roger Ackroyd*. It's still considered her masterpiece. When Agatha Christie got tired of Hercule Poirot she invented Miss Marple, a deceptively mild old lady with her own method of investigation. Her last Poirot book, *Curtain*, appeared shortly before her death, and her last Miss Marple story, *Sleeping Murder*, and her autobiography were published after her death.

Agatha Christie's success with millions of readers lies in her ability to combine clever plots with excellent character drawing, and a keen sense of humour with great powers of observation. Her plots always mislead the reader and keep him in suspense. He cannot guess who the criminal is. Fortunately, evil is always conquered in her novels.

Agatha Christie's language is simple and good and it's pleasant to read her books in the original.

Text 9 Conan Doyle

Many years ago a young doctor began to write stories about a man who was a detective. Readers liked his stories because they were very interesting and the doctor decided to become a writer. The doctor was Conan Doyle and he wrote about Sherlock Holmes.

Conan Doyle wrote his first story about Sherlock Holmes in 1887. In this story the detective meets his friend Dr. Watson. Holmes and Watson lived at 221 B Baker Street in London.

Many discussions take place about where 221 B was. There is no house there now. But a large company has its office near the place. This company answers twenty or so letters which still come every week to Sherlock Holmes, 221 B Baker Street. Most come from the United States and many people ask if Mr. Holmes can help them with some problem.

The company answers saying that, "Mr. Sherlock Holmes is no longer working as a detective".

There is a pub in London called Sherlock Holmes. One of the rooms in the pub is Sherlock Holmes' room. It has many things the room in Conan Doyle's stories had - Holmes' hat, some letters written to Sherlock Holmes, chairs and tables like those described in the stories. Besides, there are some pictures of Holmes and Conan Doyle, of actors who played Holmes and Watson in films, on television and radio.

In 1961 lovers of Sherlock Holmes formed the Sherlock Holmes Society. They meet three or four times a year to talk about Sherlock Holmes. The members of the Society know the stories about Sherlock Holmes very well, and they discuss these stories at their meetings.

Text 10 Diana - the People's Princess

Diana Spencer was born on the first of July 1961 in Sandringham in England. She had two older sisters and a younger brother. In childhood she liked games, swimming, running and

dancing. She wanted to become a dancer. Besides she loved children very much and at the age of sixteen she worked in schools for very young children.

Diana became princess, when Prince Charles, the Queen's son, asked her to be his wife and they got married. They seemed to be a happy couple at first. They had two sons. They travelled a lot they worked a lot, they visited many countries together. But Diana was not quite happy because they did different things and Charles didn't understand her.

Why was Diana the most famous, the most beautiful, the most photographed woman in the world? Why did she win the hearts of millions and millions of people in many countries? Why did so many people come to London to remember her when she died? Why did the car accident which took her life, become such a total shock to crowds of people? Why did people feel the need to be in London at the funeral? Why did the tears and love at the funeral move the world?

The answer is so simple. Matthew Wall, a student at St. Michael's College in Burlington said: She was such a lovely lady. She did so much for those people less fortunate than herself.

She was a kind woman. Hundreds of people talked about Diana's kindnesses. She liked ordinary people, though she was rich and had many rich friends. Wherever she was, she was always ready to lend a hand. She was devoted to the sick and the poor. She visited hospitals for people with AIDS and for lepers and wasn't afraid to touch them, talk to them, listen to them. She worked on children's charities, and had teamed up with Hillary Clinton in an effort to ban landmines. And it's not only money, that she wanted to give people. She wanted to give them a part of her soul to make them happy because she was unhappy herself. She wanted to give them love, because she needed love herself.

Diana was seen many times in floods of tears, because of the pressures of her loveless 15-year marriage. It is not a secret that Diana was hounded and humiliated to the point of mental breakdown and was able to pull through only because she knew she had the love of the people to buoy her in her darkest hours.

She was, indeed, the People's Princess.

Text 11 Margaret Thatcher

Margaret Hilda Thatcher, Baroness Thatcher, LG, OM, PC, FRS (née Roberts; 13 October 1925 – 8 April 2013) was a British stateswoman and politician who was the Prime Minister of the United Kingdom from 1979 to 1990 and the Leader of the Conservative Party from 1975 to 1990. She was the longest-serving British Prime Minister of the 20th century and is currently the only woman to have held the office. A Soviet journalist dubbed her the "Iron Lady", a nickname that became associated with her uncompromising politics and leadership style. As Prime Minister, she implemented policies that have come to be known as Thatcherism.

Originally a research chemist before becoming a barrister, Thatcher was elected Member of Parliament (MP) for Finchley in 1959. Edward Heath appointed her Secretary of State for Education and Science in his 1970 government. In 1975, Thatcher defeated Heath in the Conservative Party leadership election to become Leader of the Opposition and became the first woman to lead a major political party in the United Kingdom. She became Prime Minister after winning the 1979 general election.

On moving into 10 Downing Street, Thatcher introduced a series of political and economic initiatives intended to reverse high unemployment and Britain's struggles in the wake of the Winter of Discontent and an ongoing recession. Her political philosophy and economic policies emphasised deregulation (particularly of the financial sector), flexible labour markets, the privatisation of state-owned companies, and reducing the power and influence of trade unions. Thatcher's popularity during her first years in office waned amid recession and high unemployment, until the 1982 Falklands War and the recovering economy brought a resurgence of support, resulting in her re-election in 1983.

Thatcher was re-elected for a third term in 1987. During this period her support for a Community Charge (referred to as the "poll tax") was widely unpopular, and her views on the European Community were not shared by others in her Cabinet. She resigned as Prime Minister and party leader in November 1990, after Michael Heseltine launched a challenge to her leadership. After retiring from the Commons in 1992, she was given a life peerage as Baroness Thatcher, of Kesteven in the county of Lincolnshire, which entitled her to sit in the House of Lords. After a series of small strokes in 2002, she was advised to withdraw from public speaking. Despite this, she managed to deliver a eulogy to Ronald Reagan at his funeral in 2004. In 2013 she died of another stroke in London at the age of 87.

Text 12 A Brief History of Oxford city

Oxford was founded in the 9th century when Alfred the Great created a network of fortified towns called burhs across his kingdom. One of them was at Oxford. Oxford is first mentioned in 911 in the Anglo-Saxon Chronicle.

According to legend, Oxford University was founded in 872 when Alfred the Great happened to meet some monks there and had a scholarly debate that lasted several days. In reality, it grew up in the 12th century when famous teachers began to lecture there and groups of students came to live and study in the town.

But Oxford was a fortress as well as a town. In the event of war with the Danes all the men from the area were to gather inside the burgh. However this strategy was not entirely successful. In 1009 the Danes burned Oxford. However Oxford was soon rebuilt. In 1013 the Danish king claimed the throne of England. He invaded England and went to Oxford. In 1018 a conference was held in Oxford to decide who would be the king of England.

By the time of the Norman Conquest, there were said to be about 1,000 houses in Oxford, which meant it probably had a population of around 5,000. By the standards of the time, it was a large and important town (even London only had about 18,000 inhabitants). Oxford was the 6th largest town in England. Oxford probably reached its zenith at that time. About 1072 the Normans built a castle at Oxford.

In the 12th and 13th centuries Oxford was a manufacturing town. It was noted for cloth and leather. But in the 14th and 15th centuries manufacturing declined. Oxford came to depend on the students. It became a town of brewers, butchers, bakers, tailors, shoemakers, coopers, carpenters and blacksmiths. In the later Middle Ages Oxford declined in importance.

In the 16th century Oxford declined further in terms of national importance, though it remained a fairly large town by the standards of the time. Oxford was economically dependent on the university. The students provided a large market for beer, food, clothes and other goods.

From 1819 Oxford had gas street lighting.

In the late 19th century a marmalade making industry began in Oxford. There was also a publishing industry and an iron foundry.

Oxford gained its first cinema in 1910.

The fate of Oxford was changed in 1913 when a man named Morris began making cars in the city. In 1919 a radiator making company was formed. By the 1930s

Text 13 A Brief History of Cambridge

Cambridge was founded in 875 when the Danes conquered Eastern England. They created a fortified town called a burgh, from which the word borough derives. Cambridge was surrounded by a ditch and an earth rampart with a wooden palisade on top. However in 1010 Cambridge was burned by the Danes. That was an easy task when all the buildings were of wood.

By the 10th century Cambridge was also the administrative centre for the area and so it was a town of some importance, although it would seem tiny to us. By 1086 Cambridge probably had a population of about 2,000. By the standards of the time it was a medium sized town.

Later in the Middle Ages the population of Cambridge probably rose to about 3,000. In 1068 William the Conqueror visited Cambridge and ordered that a castle be built there. At first it was of wood but in the 12th century, it was rebuilt in stone.

The town of Cambridge was severely damaged by a fire in 1174. Fire was a constant hazard when most buildings were of wood with thatched roofs. Another fire raged in Cambridge in 1385.

In the Middle Ages Cambridge had a weekly market and by the early 13th century it also had a fair. In those days fairs were like markets but they were held only once a year for a period of a few days- People came from all over Eastern England at a Cambridge fair. Cambridge prospered because it was located on the river Cam.

In Cambridge there was a leather industry. By the 15th century there was also a wool industry.

In 1728 it was estimated that the population of Cambridge was more than 6,000, 1,600 of whom were inhabitants of the university. By the standards of that time Cambridge was a big town. The first newspaper in Cambridge appeared in 1744. The first bank in Cambridge was opened in 1780.

The railway reached Cambridge in 1845. It stimulated the growth of industry in Cambridge by connecting the town to a huge market in London. From the late 19th century a new industry of making scientific instruments grew up in Cambridge. Cambridge gained gas light in 1823.

From 1880 horse drawn trams ran in the streets of Cambridge. The first electricity was generated in Cambridge in 1893.

In the 20th century the university, while still important, did not dominate Cambridge. New industries of electronics grew up. Making surgical and scientific instruments was also important.

Text 14 English Meals

The English proverb says: every cook praises his own broth. One can not say English cookery is bad, but there is not a lot of variety in it in comparison with European cuisine. The English are very particular about their meals. The usual meals in England are breakfast, lunch, tea and dinner.

Breakfast time is between seven and nine a.m. A traditional English breakfast is a very big meal. It consists of juice, porridge, a rasher or two of bacon and eggs, toast, butter, jam or marmalade, tea or coffee. Marmalade is made from oranges and jam is made from other fruit. Many people like to begin with porridge with milk or cream and sugar, but no good Scotsman ever puts sugar on it, because Scotland is the home of porridge. For a change you can have sausages, tomatoes, mushrooms, cold ham or perhaps fish.

But nowadays in spite of the fact that the English strictly keep to their meals many people just have cereal with milk and sugar or toast with jam or honey.

The two substantial meals of the day are lunch and dinner. Lunch is usually taken at one o'clock. For many people lunch is a quick meal. Office workers usually go to a cafe at this time. They take fish, poultry or cold meat (beef, mutton, veal and ham), boiled or fried potatoes and all sorts of salad. They may have a mutton chop or steak and chips, followed

by biscuits and a cup of coffee. Some people like a glass of light beer with lunch. Pubs also serve good, cheap food. School children can have a hot meal at school. Some of them just bring a snack from home.

Tea is very popular among the English; it may almost be called their national drink. Tea is welcome in the morning, in the afternoon and in the evening. The English like it strong and fresh made. The English put one tea-spoonful of tea for each person. Tea means two things. It is a drink and a meal. Some people have afternoon tea, so called «high tea» with sandwiches, tomatoes and salad, a tin of apricots, pears or pineapples and cakes, and, of course a cup of tea. That is what they call good tea. It is a substantial meal.

Cream teas are also popular. Many visitors, who come to Britain, find English instant coffee disgusting. Dinner time is generally between six and eight p.m. The evening meal is the biggest and the main meal of the day. Very often the whole family eats together. They begin with soup, followed by fish, roast chicken, potatoes and vegetables, fruit and coffee.

On Sundays many families have a traditional lunch consisting of roast chicken, lamb or beef with salads, vegetables and gravy.

Text 15 Life of Youth in Britain

Young people from all walks of life are united according to their interests by the established youth organizations in Britain. These organizations develop because of the contribution of both full-time and part-time youth workers and a great number of volunteers.

Outdoor pursuits involve anything from pony trekking to rock-climbing or canoeing and help young people go out from the confines of their home or their environment. Such pursuits nourish a spirit of self-reliance and help realize the importance of team-work under a good leadership. All the major youth organizations hold outdoor pursuits either by organizing special residential courses or by sending their members to take part in established courses or seminars in other cities and countries.

Local authorities and a number of multipurpose youth organizations provide the place for such activities as canoeing, sailing, rock-climbing, map reading, orienteering and cooking for survival; all of them encourage initiative and self-discipline.

Among providers of outdoor places are the Sports Council, the Outward-Bound Trust, the Ocean Youth Club, the Sail Training Association, and the Nautical Training Corps.

The Outward-Bound Trust is the longest established and most experienced organization in Britain based on outdoor pursuits, personal development, and training. It has five centres in the English Lake District, Wales, and Scotland. It operates in 38 other countries of the world. It has centres in Belgium, France, Germany, and the Netherlands. This organization is based on two simple principles: firstly, that everyone is capable of achieving more than he might imagine, and, secondly, that too few people have a real appreciation of what can be achieved by team-work and mutual support.

Young people participate in 'expedition courses' lasting 8, 12, or 20 days and involving adventurous journeys by land or sea. There are also 'specialist courses' for young people aged 17 and over to become involved in work with such groups as the homeless, the elderly, and the disabled.

Text 16 National Emblems of the United Kingdom

The United Kingdom (abbreviated from "The United Kingdom of Great Britain and Northern Ireland") is the political name of the country which consists of England, Scotland, Wales and Northern Ireland (sometimes known as Ulster).

Great Britain is the name of the island which is made up of England, Scotland, Wales, whereas the British Isles is the geographical name of all the islands off the north-west coast of the European continent. In everyday speech "Britain" is used to mean the United Kingdom.

The flag of the United Kingdom, known as the Union Jack, is made up of three crosses. The upright red cross on a white background is the cross of the 1st George, the patron saint of England. The white diagonal cross on a blue background is the cross of St. Andrew, the patron saint of Scotland, The red diagonal cross on a white background is the cross of St. Patrick, the patron saint of Ireland.

The Welsh flag, called the Welsh dragon, represents a red dragon on a white and green background.

St. George's Day falls on 23 April and is regarded as England's national day. On this day some patriotic Englishmen wear a rose pinned to their jackets'. A red rose is the national emblem of England from the time of the Wars of the Roses (15th century).

St. Andrew's Day (the 30th of November) is regarded as Scotland's national day. On this day some Scotsmen wear a thistle in their buttonhole. As a national emblem of Scotland, thistle apparently first used in the 15th century as a symbol of defence. The Order of the Thistle is one of the highest orders of knighthood. It was founded in 1687, and is mainly given to Scottish noblemen (limited to 16 in number).

St. Patrick's Day (the 17th of March) is considered as a national day in Northern Ireland and an official bank holiday there. The national emblem of Ireland is shamrock. According to legend, it was the plant chosen by St. Patrick to illustrate the Christian doctrine of the Trinity to the Irish.

St. David's Day (the 1st of March) is the church festival of St. David, a 6th-century monk and bishop, the patron saint of Wales. The day is regarded as the national holiday of Wales, although it is not an official bank holiday.

On this day, however, many Welshmen wear either a yellow daffodil or a leek pinned to their jackets, as both plants are traditionally regarded as national emblems of Wales.

In the Royal Arms three lions symbolize England, a lion rampant — Scotland, and a harp — Ireland. The whole is encircled and is supported by a lion and a unicorn.

Text 17 Historical Reference

In 383 the Roman legions began to leave Britain to fight in Gaul (France) against the Barbarian tribes who were invading the Roman Empire. By 407 there were not enough Roman soldiers to defend Britons from Picts and Scots, fierce tribes from the North.

The British chiefs asked Anglo-Saxon soldiers to come from Germany to help them.

Anglo-Saxons were strong and well trained, they defeated Picts and Scots, but when afterwards Britons asked to do it and stayed.

After about one hundred and fifty years of fighting Britons had either been forced to Wales or had become slaves.

Anglo-Saxons founded a lot of kingdoms: Kent, Essex, Wessex, Mercia, Northumbria.

In 789 more than three hundred years after the Anglo-Saxons had settled in Britain, the Vikings began to attack the British Isles. They came from Norway, Sweden and Denmark. The winters there were long and cold and soil was poor, so Britain was a rich prize for them. They made a big army. The Anglo-Saxon kingdoms couldn't resist the Vikings, and soon only the kingdom of Wessex remained free of them – the King of Wessex was Alfred the Great.

King Alfred the Great was one of the first kings of England. He was a great and kind king. He did so much that was good for the people of England that people called him Alfred the Good.

In the time of Alfred the Great not many men or women could read or write. Alfred could read and write well. He wanted his people to have schools where they could learn to read and write. While he was king, many people went to school for the first time their lives.

Alfred was a brave man as well as a good one. While he was king, the Danes came in their boats to England and fought their way up the rivers. They wanted to live in England and make it their own country. Alfred and his people fought hard because they did not want to give up their country to the Danes.

King Alfred and the Vikings made a treaty. They agreed that the Vikings would live in an area called the Danelaw, where they could follow their traditions and obey their law. So the vikings settled in England and mixed with Anglo-Saxons. The process wasn't very painful as these two nations were very much alike and had similar languages. But more and more Vikings were coming from the continent and by 1020 King Sweyn of Denmark became the first Danish King of England.

Text 18 A View on Entertainment in Britain

BRIAN CARTER, a student, is not happy with entertainment in Britain. "British audiences can be interminably irritating with their frequently snobby, haughty and smug attitudes"

It is perhaps ironic that it should be possible to write about what is irritating and loathsome about entertainment in Britain; entertainment is supposed to be diverting and enjoyable but this is decidedly not always the case.

Take the cinema... To see a film you have either to go to one of the huge multiplexes that has sprung up on the outskirts of towns over the last couple of years or to stick to the high street movie theatres which have either remained unchanged and poorly maintained since Charlie Chaplin's heyday or are old dance halls or bingo palaces converted to cinemas sometime around 1952 when orange and brown were apparently considered the quickest route to tasteful interior decoration: they are all ugly and dilapidated with moth-eaten, creaky and cramped seats. A visit to the multiplex is a little more enjoyable, because at least these cinemas usually have hot dogs.

The British seem not to have grasped the concept of what is and what is not appropriate snack-food for the cinema. The whole point about popcorn is that it doesn't crinkle in a wrapper and it doesn't crunch in your mouth. In Britain, though, cinemas sell crisps and candy in plastic wrappings. Little is more frustrating than trying to concentrate on the screen when you are sitting next to Mr and Mrs Greedy with Junior Greedies stuffing their faces with crunchy food from crinkly wrappers, saliva drooling slowly down their chins.

The theatre is little better. Although Britain has a theatrical tradition that is richer and more varied than almost any country in the world (this is, after all, the nation that has produced Shakespeare, Laurence Olivier and a sector of London — the West End — packed with more theatres and original productions than you could wish for), British audiences can be interminably irritating with their frequently snobby and smug attitudes. Worst of all are the regulars of the Royal Shakespeare Company who derive immense pleasure from spotting — or pretending to spot — the most intellectual of puns (plays on words) or witty quips. They then laugh ostentatiously in a theatrical manner to show the surrounding audience that they, and only they, have the intelligence to understand the true meaning of the play that they are watching. You can always spot these characters because they glance discreetly around themselves a few seconds after they have finished laughing to check that their neighbours have noticed them.

Text 19 Education in Great Britain: Higher Education

For seven hundred years Oxford and Cambridge universities dominated the British education. Scotland had four universities, all founded before A. D. 1600. Wales only acquired a university in the 20th century; it consisted of four university colleges located in different cities (Cardiff, Swansea, Bangor, and Aberystwith). The first English university after Oxford and Cambridge (sometimes referred to as Oxbridge) was Durham, in the North of England, founded in 1832. The University of London was founded a few years later in 1836.

During the nineteenth century institutions of higher education were founded in most of the biggest industrial towns, like Birmingham, Manchester, Leeds, Sheffield (sometimes called the Redbrick Universities). At first they did not have full university status but were known as university colleges; since 1945, however, all have become independent universities, and in recent years a number of other universities have been founded: Sussex, Essex, Warwick, and others.

In the middle 60s there was a further new development. Some of the local technical colleges maintained by local authorities had gained special prestige. By 1967 ten of these had been given charters as universities. Many of them are in the biggest cities where there were already established universities; so now we have the University of Aston

(Birmingham), Salford (close to Manchester), Strathclyde (Glasgow), Herriot-Watt University (Edinburgh), Brunei University (London).

When we add all these together we find that the number of universities in England increased within ten years from nineteen to thirty-six, and in Scotland from four to eight.

Oxford university is a federation of colleges, and it is impossible to understand its structure unless one first understands the nature and function of these colleges, which have no resemblance whatever with the institutions called "colleges" in America.

Oxford has twenty-three ordinary colleges for men, five for women. All these are parallel institutions, and none of them is connected with any particular field of study. No matter what subject a student proposes to study he may study at any of the men's colleges.

Each college has a physical existence in the shape of a dining-hall, chapel, and residential rooms (enough to accommodate about half the student membership, the rest living in lodgings in the town). It is governed by its Fellows (commonly called "dons"), of whom there are usually about twenty or thirty. The dons are also responsible for teaching the students of the college through the tutorial system. The Fellows elect the Head of the college (whose title varies from college to college).

Text 20. Democracy in Great Britain

Great Britain is one of the biggest and highly developed countries in the world. Britain's democratic system of government is long established and well tried, and has provided a remarkable political stability. Britain's overseas relations including its membership in the European Economic Community and its links with Commonwealth countries, enable it to realize international cooperation.

Great Britain has diplomatic relations with 166 countries, bears the responsibility for 14 independent territories, provides assistance to over 120 developing countries and is a member of some international organizations. It is one of the five permanent members of the UNO Security Council. Great Britain is a member of the European Economic Community. The Community defines its aims as the harmonious development of economic activities. It has abolished internal tariffs, established common custom tariffs, and set a goal of the creation of an internal market in which free movement of goods, services, persons, and capital would be ensured in accordance with the Treaty of Rome.

By the middle of 2000 Britain had adopted more laws regulating the activity in the internal market than any other Community member. The Community now accounts for a fifth of world trade. Half Britain's trade is with its eleven Community partners.

Great Britain takes an active part in the work of the Commonwealth, which is a voluntary association of 50 independent states. The English Queen is recognized as Head of the Commonwealth.

Great Britain promotes sustainable economic and social progress in developing countries. Almost £65 million were spent on disaster relief, help for refugees and emergency humanitarian aid.

Britain's defence policy is based on its membership in NATO, which is committed to defend the territories of all its states-members.

Text 21. Unwritten Rules of Great Britain

Good and bad manners make up the social rules of a country. They are not always easy to learn because they are often not written down in books. For example, British women didn't go into pubs at the beginning of this century because it was not considered respectable

behaviour for a woman. Now both women and men drink freely in pubs and women are fully integrated into public life. Visitors to Britain are often surprised by the strange behaviour of the inhabitants. One of the worst mistakes is to get on a bus without waiting your turn in the queue. The other people in the queue will probably complain loudly! Queuing is a national habit and it is considered polite or good manners to wait for your turn.

In some countries it is considered bad manners to eat in the street, whereas in Britain it is common to see people having a snack whilst walking down the road, especially at lunchtime. Britons may be surprised to see young children in restaurants in the evening because children are not usually taken out to restaurants late at night. And if they make a noise in public or in a restaurant it is considered very rude. In recent years children are playing a more active role and they are now accepted in many pubs and restaurants.

In recent years smoking has received a lot of bad publicity, and fewer British people now smoke. Many companies have banned smoking from their offices and canteens. Smoking is now banned on the London Underground, in cinemas and theaters and most buses. It's becoming less and less acceptable to smoke in a public place. It is considered rude or bad manners to smoke in someone's house without permission. Social rules are an important part of our culture as they passed down through history. The British have an expression for following these "unwritten rules": "When in Rome, do as the Romans do".

Text 22. Palace of Westminster

The Palace of Westminster is the meeting place of the House of Commons and the House of Lords, the two houses of the Parliament of the United Kingdom. Commonly known as the Houses of Parliament after its occupants, it is also known as the 'heart of British politics'. The Palace lies on the northern bank of the River Thames in the City of Westminster, in central London. Its name, which derives from the neighbouring Westminster Abbey, may refer to either of two structures: the Old Palace, a medieval building complex that was destroyed by fire in 1834, and its replacement, the New Palace that stands today. For ceremonial purposes, the palace retains its original style and status as a royal residence and is the property of the Crown.

The first royal palace was built on the site in the eleventh century, and Westminster was the primary residence of the Kings of England until a fire destroyed much of the complex in 1512. After that, it served as the home of the Parliament of England, which had been meeting there since the thirteenth century, and also as the seat of the Royal Courts of Justice, based in and around Westminster Hall. In 1834, an even greater fire ravaged the heavily rebuilt Houses of Parliament, and the only medieval structures of significance to survive were Westminster Hall, the Cloisters of St Stephen's, the Chapel of St Mary Undercroft, and the Jewel Tower.

The subsequent competition for the reconstruction of the Palace was won by the architect Charles Barry, whose design was for new buildings in the Gothic Revival style, specifically inspired by the English Perpendicular Gothic style of the 14th-16th centuries. The remains of the Old Palace (with the exception of the detached Jewel Tower) were incorporated into its much larger replacement, which contains over 1,100 rooms organised symmetrically around two series of courtyards. Part of the New Palace's area of 3.24 hectares (8 acres) was reclaimed from the Thames, which is the setting of its principal 266-metre (873 ft) façade, called the River Front. Barry was assisted by Augustus W. N. Pugin, a leading authority on Gothic architecture and style, who provided designs for the decorations and furnishings of the Palace. Construction started in 1840 and lasted for thirty years, suffering great delays and cost overruns, as well as the death of both leading architects; works for the interior decoration continued intermittently well into the twentieth century. Major conservation work has been carried out since, to reverse the effects of London's air pollution, and extensive repairs took place after the Second World War, including the reconstruction of the Commons Chamber following its bombing in 1941.

Text 23 Rail transport in Great Britain

The railway system in Great Britain is the oldest in the world: the world's first locomotive-hauled public railway opened in 1825. Most of the railway track is managed by Network Rail, which in 2015 had a network of 15,760 kilometres (9,790 mi) of standard-gauge lines, of which 5,272 kilometres (3,276 mi) were electrified. These lines range from single to quadruple track or more. In addition, some cities have separate rail-based mass transit systems (including the extensive and historic London Underground). There are also several private railways (some of them narrow-gauge), which are primarily short tourist lines. The British railway network is connected with that of continental Europe by an undersea rail link, the Channel Tunnel, opened in 1994.

The United Kingdom is a member of the International Union of Railways (UIC). The UIC Country Code for United Kingdom is 70. The UK has the 18th largest railway network in the world; despite many lines having closed in the 20th century it remains one of the densest rail networks. It is one of the busiest railways in Europe, with 20% more train services than France, 60% more than Italy, and more than Spain, Switzerland, The Netherlands, Portugal and Norway combined, as well as representing more than 20% of all passenger journeys in Europe.

In 2014, there were 1.65 billion journeys on the National Rail network, making the British network the fifth most used in the world (Great Britain ranks 23rd in world population). Unlike a number of other countries, rail travel in the United Kingdom has enjoyed a renaissance in recent years, with passenger numbers reaching their highest ever level (see usage figures below). This has coincided with the privatisation of British Rail, but the effect of this is disputed. The growth is partly attributed to a shift away from private motoring due to growing road congestion and increasing petrol prices, but also to the overall increase in travel due to affluence. However passenger journeys have grown much more quickly than in comparable countries such as France and Germany.

To cope with increasing passenger numbers, there is a large ongoing programme of upgrades to the network, including Thameslink, Crossrail, electrification of lines, in-cab signalling, new inter-city trains and a new high-speed line.

Text 24. Tea in Britain

Tea, that most quintessential of English drinks, is a relative latecomer to British shores. Although the custom of drinking tea dates back to the third millennium BC in China, it was not until the mid 17th century that the beverage first appeared in England.

The use of tea spread slowly from its Asian homeland, reaching Europe by way of Venice around 1560, although Portuguese trading ships may have made contact with the Chinese as early as 1515.

It was the Portuguese and Dutch traders who first imported tea to Europe, with regular shipments by 1610. England was a latecomer to the tea trade, as the East India Company did not capitalize on tea's popularity until the mid-18th century.

Coffee Houses

Curiously, it was the London coffee houses that were responsible for introducing tea to England. One of the first coffee house merchants to offer tea was Thomas Garway, who owned an establishment in Exchange Alley. He sold both liquid and dry tea to the public as early as 1657. Three years later he issued a broadsheet advertising tea at £6 and £10 per pound (ouch!), touting its virtues at "making the body active and lusty", and "preserving perfect health until extreme old age".

Tea gained popularity quickly in the coffee houses, and by 1700 over 500 coffee houses sold it. This distressed the tavern owners, as tea cut their sales of ale and gin, and it was bad news for the government, who depended upon a steady stream of revenue from taxes on liquor sales. By 1750 tea had become the favoured drink of Britain's lower classes.

Taxation on Tea

Charles II did his bit to counter the growth of tea, with several acts forbidding its sale in private houses. This measure was designed to counter sedition, but it was so unpopular that it was impossible to enforce. A 1676 act taxed tea and required coffee house operators to apply for a license.

This was just the start of government attempts to control, or at least, to profit from the popularity of tea in Britain. By the mid 18th century the duty on tea had reached an absurd 119%. This heavy taxation had the effect of creating a whole new industry - tea smuggling.

Text 25 So is English the International Language?

If an international language exists today, it is inarguably English. Not only is it the default language of international business, it has integrated itself into many languages through loanwords. Loanwords span from “Internet” to common phrases like “Ok”. There are more than 350 million people that claim English as their native language, and 430 million more people speak it as their second language. English speakers are found in every corner of the world, so it’s hard to ignore its status as an international language.

English is a West Germanic language that spans the globe, from the United States to New Zealand. It’s estimated that there are around 2 billion English speakers of varying nationalities spread throughout the world. There are many varieties of English as well, ranging from British to South African English, each with their own idiosyncrasies.

Just as English has loaned words out to other languages, other languages have loaned their words out to English as well. The English language gains words like “ballet” from French, “kindergarten” from German, “patio” from Spanish, “tsunami” from Japanese, and “moped” from Swedish. It can be assumed that, as English spreads throughout the world, it will continue to gain new vocabulary from other languages. Similarly, other languages will continue to gain new vocabulary from English.

How did English Become the International Language of the World?

So what accounts for the rise of English? The English language has a bit of a sordid past, originally spreading from the reign of the British Empire.

It has been thriving on what many call ‘cultural imperialism’ since then, with the rise of the communication age easing the spread of the language. As with many things, the number of speakers of a language depends heavily on the political power of its native speakers. If there’s anything the British Empire had some 300 years ago, it was political power. This has made English an official language in 50+ countries worldwide.

Since the British Empire, English has continued to expand through its native speakers, who span the globe from the United States to Australia. As English speakers grow in number, the number of people who want to learn an increasingly useful language will also grow.

3 семестр – тексты социокультурной направленности

1. LANGUAGE LEARNING

Recent psycholinguistic studies on how people learn languages have been accompanied by emphasis among English language teachers on the learner as an individual. Preferred learning styles are increasingly respected and learner independence is encouraged. For some teachers, non-interference is the key to giving a successful lesson. For others, this is an abdication of the teacher's role and shows ignorance of what can be done to make learning more efficient. If there has been a revolution in language teaching methodology, surely there are some things teachers can do to help learners.

In the past, many of Britain's top schools modelled the teaching of modern languages on the teaching of Latin. Oral fluency was therefore undervalued and accuracy in the written language became the main goal. Your French might be excellent on your school report, but you could still arrive in France and fail to understand a word.

A separate method known as audio-lingualism made its appearance in private language schools. This emphasized the primacy of the spoken word, yet lesson content was mainly structural and contained few of the features of spoken English used as a vehicle for communication. Surely teachers can at least provide learners with good models of target behaviour.

2. MALE AND FEMALES

In the British General Election in 1997, some of the most powerful men in the country lost their seats to professionally successful women. One hundred and nineteen women were elected to the House of Commons and five women secured Cabinet posts. By 1997, over a million of Britain's four million small businesses were run by women. Many of

these women had left corporate life because of their difficulties in progressing in large organisations, especially in the world of finance, where men are generally favoured for the top managerial posts.

During the twentieth century, women in Britain have had to campaign vigorously for equal rights - the right to education, the right to vote and the right to work in posts traditionally reserved for men. It was largely through war-work that women proved their capabilities.

More recently, they have been outperforming men in public examinations. Women's rights campaigns have focused particularly on language and thought. Terms such as "chairman" have been changed to more neutral descriptions such as "chair" or less ambiguous alternatives such as "president". This is part of the recent concept known as "political correctness".

Some men are careful to avoid accusations of sexism and sexual harassment while others have reacted by campaigning for "men's rights".

3. MASS MEDIA

The media includes national and local newspapers, satellite, cable and terrestrial television, radio, magazines, journals, teletext and the Internet. Nearly all Britain's national newspapers are owned by UK conglomerates or by foreign-based multinational companies. Consequently, in order for a political party to get elected to government it is extremely helpful to have the support of business tycoons such as Rupert Murdoch, owner of Sky, which broadcasts on many channels, as well as many British national newspapers, including The Sun, the tabloid with a circulation of about 4 million readers.

In a true democracy, the media would provide accurate information and would protect the interests of all the people. However, many TV channels and local newspapers are largely dependent on advertising for their revenue. Although they are often provided free to viewers and readers, the controllers and editors have to please the advertisers whose products may sometimes exploit underpaid work-forces or do damage to carefully targeted consumers.

Viewers and readers are classified by both media providers and advertising agencies according to different social categories ranging from grades A and B for senior managers and professional people through to grades D and E for unskilled workers and casual labourers respectively.

4.RELIGION

A person with a faith or religion can be referred to as a believer. However, in secular societies where few people participate in religious worship, it is more common to meet atheists and agnostics. Atheists take the view that there is no God. Agnostics simply do not know whether or not God exists. Some may have read many theological texts in search of proof one way or the other, though the majority of agnostics probably give little time to questions of religion. This does not necessarily mean that they have no moral guidelines.

People who have social consciences often prefer to describe themselves as humanists. They may well share many of the same concerns as Christians, Muslims, Hindus, Buddhists or Jews. These may relate to war and peace, sexual morality or many other aspects of human relationships.

In Britain, the two largest denominations are Protestant and Catholic. Both of these groups belong to the Christian church, though the Protestants separated from the Catholic church in the sixteenth century and no longer recognise the pope as their head. Among the Protestants are Anglicans who are members of the Church of England. As you move up through the ranks of the clergy, you may start as a curate, helping the vicar or rector in charge of a parish.

There are several types of priest. A successful vicar will move from being a Reverend to a Canon by which time the congregation - the people who attend church - will probably be fairly large. The main administrator of a very large church or cathedral is called the dean, though the priest in charge of the diocese - a large area such as the city of London or Birmingham - is the bishop. The bishop is assisted by an archdeacon. The highest ranking bishop - in charge of all the churches in a particular area - is the archbishop. The reigning king or queen is the head of the Church of England.

5. RICH AND POOR

The common phrases used to describe the rich world include "the developed countries" and "the advanced industrial countries". To describe very poor countries, we usually refer to "The Third World". It can be more diplomatic to speak of "the

developing countries", though this description is often applied to countries which are not so very poor.

Economists also refer to "the North South divide" to emphasize that countries in the northern hemisphere are generally richer than those in the southern hemisphere - namely Africa and Latin America.

People in the rich world have mixed attitudes towards giving aid to Third World countries. Some take the view that charity begins at home. It is true that there are many people in need in Britain. However, the people who are making the most generous donations to domestic charities are often the ones who are supporting emergency appeals for the victims of conflicts and disasters overseas. Church-based campaigns such as "Christian Aid" and secular ones such as "Children in Need" direct themselves to both national and international causes.

The obligation of the rich world towards the poor world is not based on history alone. As a former colonial power, Britain was once responsible for the slave trade and the exploitation of other countries' resources. But today, together with other rich countries, we continue to dominate world markets, setting the terms of trade in our favour. We continue to sell arms to oppressive regimes, which accumulate debt and do little to alleviate hunger among their own populations.

6. SOCIETY

The meaning of "society" is susceptible to changes in place and time. In Britain, during the Second World War, there was a feeling of community because civilians helped one another out. When the war ended, the Welfare State was founded. People were provided with free eye-tests, glasses, medicines and dental check-ups. There was a sense of the strong helping the weak. By the end of the 1950s, many people were purchasing washing machines and televisions. Some were even buying their own houses. The consumer society was under way. Politicians told us that we'd never had it so good.

During the 1960s, in both Britain and America, the conventional view of society was challenged by a youth movement whose opinions were articulated through pop and folk music and student politics. Songs such as "Little Boxes" ridiculed the idealized picture of the two parent family whose children went through both summer school and university to become perfect products of society. The little boxes of many different colours, but which all looked just the same, were the suburban dwellings of the American middle class. Other songs such as "What did you learn in school, today?" questioned the image of the good citizen who never doubts the teacher's word,

regards the police as friends, supports the death penalty and is eager to fight for his country. The attack on the uniformity of the family developed into a protest against the Vietnam war. By the early 1970s, criticism turned to the corruption inherent in the Nixon administration.

Today, people show greater tolerance towards different family structures such as single parent families and there is a wider acceptance of different races and sexual orientations. However, trust is in short supply, judging by the number of security alarms fitted to our houses and cars and the emergence of neighbourhood watch schemes as the social institutions of the 1990s.

7. TRADITIONS

In a world of technological change, we struggle to keep up with new developments, yet at the same time, many of us welcome the continuity and repetition provided by traditions. Some of our traditions are connected with places; others relate to the calendar and religious or pagan ceremonies.

There are a number of towns and cities in Britain which are associated with legendary people or creatures. Tourists visiting Nottingham can take a trip to Sherwood forest where they can revive the legend of Robin Hood. A journey to Loch Ness, near Inverness in Scotland, may result in a sighting of "Nessie" the famous monster. London is rich in traditions such as the changing of the guards at Buckingham Palace and Horse Guards Parade. The opening of parliament when members of the House of Commons are called to the House of Lords to attend the Queen's Speech is just one of many annual events.

Annual religious ceremonies provide us with holly, fir-trees and crackers at Christmas, and chocolate eggs at Easter. Other yearly events include Burns' Night in January to celebrate the birth of Scotland's great national poet, pancake day in February, April Fools' Day on 1st April and the crowning of the May Queen on 1st May.

Traditions are also observed during important moments of our lives such as weddings and funerals. In a traditional British church wedding, the bride wears a long white dress while the groom wears a black cloak and top hat. The bride's father escorts her to the front of the church and she is attended by bridesmaids when she leaves. The

groom, accompanied by the "best man" brings a gold ring which is placed on the bride's finger after the couple have made serious promises. The groom is then allowed to kiss the bride.

8. WORK

People in Britain can look for jobs in the Situations Vacant column of national or local newspapers. National newspapers such as "The Guardian" focus on different areas of employment such as media, education, social work and information technology on different days. Job vacancies are also displayed at Job Centres and other Employment Agencies in towns and cities and on the Internet.

Before applying for a job, you should check that you meet the requirements. These are usually specified in terms of previous experience, qualifications and personality. To show that you are a suitable candidate for the post, it is usual to enclose a curriculum vitae with your letter of application. There are many computer programs that will help you produce a well designed and professional-looking curriculum vitae, available both from computer software retailers and as freeware on the web.

If you make the right impression, you will be invited to an interview; otherwise you will probably receive a letter saying: "we regret to inform you that your application has been unsuccessful." The successful applicant will probably be given a contract of employment which will contain the job description and the terms and conditions. You show your acceptance of these by signing the contract.

On your first day of work, you may be invited to join a trade union. If so, you will probably be introduced to your shop steward, the trade union official who will represent you and your colleagues in negotiations with management. Sooner or later, you will meet your boss. The person who you report to, could also be called a line manager or director. In factories, workers often take their orders from a team-leader or foreman, who is an intermediary between the employer and the employees.

9. TRAVEL

Students often manage to travel long distances on very limited budgets. The secret is to find cheap travel, food and accommodation.

In the 1960s, British students did this through hitch-hiking and youth hostelling. It can still be done today, though drivers are much more reluctant to offer lifts to strangers.

Youth hostels are also more expensive as they tend to offer a greater level of comfort. Hostellers used to carry their own sheet sleeping bags and would expect to sleep in bunk beds, often within large single sex dormitories. A long walk to one of few outside toilets was not uncommon.

Today, other possibilities present themselves to people living near one of Britain's international airports. The cost of international rail travel has become prohibitive, but hopping around Europe on charter flights can be done very cheaply. The chief snag is finding reasonably priced accommodation when you arrive at your destination.

Cheap flights are advertised on Teletext, in most Sunday newspapers and on the web sites of budget airlines such as "Go", "Easy Jet" and "Ryan Air". Tickets can be purchased by credit card over the phone.

The very cheapest flights are to be found on the Internet where you can look for special offers, specify what kind of meal you want and even choose your exact seat, providing it has not already been booked. Payment is by credit card over a secure page and you will receive confirmation of your booking by e-mail.

Whether your reservations are made by phone or on the net, you will be given a booking reference number. If it is too late for your tickets to reach you by post, you can collect them at the airport on your day of departure by quoting your reference number.

Many British people own holiday apartments in Spain and let their properties to holiday-makers when they are not using them themselves. The apartments are usually well maintained and in beautiful locations. The owners advertise in Sunday newspapers, in journals such as "Dalton's Weekly" or "Exchange & Mart" or in exclusive magazines such as "The Lady".

10. CANADA - IT'S NOT the USA

Imagine yourself sitting in a café one day in your home town, when on the next table you hear some people speaking English with a strong North American accent. Being a friendly person, you lean over and say, "Hi! Are you American?" "No," comes the immediate answer. "Canadian!"

Calling a English-speaking Canadian an American can be as bad as telling a Scotsman that he's English or a Swiss person he's German. In spite of a common language, there are differences in culture and national feeling. "No," many Canadians will tell you with insistence, "We're not Americans! We're Canadians"

In the same way as Quebecers are determined to keep their identity, Canadians from the other provinces are determined to keep Canada's identity. Although the Canadian way of life is more and more like the American way of life, lots of details are different, and many Canadians, particularly Quebecers, are worried about the survival of their own differences.

Canadians use metres and kilometres and measure temperatures in Celsius; Americans use feet and miles, and measure temperature in Fahrenheit. The USA has states, Canada has provinces.

Yet about 80% of Canadians live within 150 km. of the U.S. border, and this has had a bad effect on the Canadian economy. Like most European countries, Canada has a national health service, and a good social security system; but good welfare services have to be paid for by high taxes, so the cost of living in Canada is high. Because of this, hundreds of thousands of Canadians often get in their cars and drive over to the USA to go shopping. This is one cause of economic problems in Canada. Over half of Canada's imports come from the United States, and Canada has a trade deficit with the USA.

But the American influence is not just a question of shopping. Lots of Canadians drive American cars, and cars are almost as important in Canada as they are in the USA. There is television too. While Quebecers tend to watch their own French-language TV stations, English-speaking Canadians have a choice between local English-speaking channels, national programmes from CBC, and dozens of American channels brought to them by cable or satellite. Unless they specifically want to watch local stations, they're just as likely to tune in to one of the big American channels as they are to a Canadian channel.

Perhaps it is not surprising if some Canadians are afraid that their country will soon be just like another part of the USA. If, one day, Quebec becomes independent, many Canadians fear that the rest of Canada could break up. Perhaps that's an exaggeration; many Canadians feel it is a real risk.

11. LONDON AND ITS PLACES OF INTEREST

The capital of Great Britain is full of popular and world-famous tourist attractions, both educational and entertaining. Most of them are located close to the river Thames, others are in different parts of London and in its suburbs. The city was founded about 2 000 years ago, so there are a lot of interesting historic and architectural sights.

Big Ben is the most famous iconic clock tower of the Houses of Parliament. Behind this long and beautiful building stands medieval Westminster Abbey where many historic weddings, coronations and burials took place. The Tower of London has rich history as a royal palace, a fortress, a prison and a place of execution. Not far from the Tower guests can see the magnificent architecture of St Paul's Cathedral, originally designed by Sir Christopher Wren. In the middle of Trafalgar Square tourists stop to admire a 52-metre Nelson's column dedicated to Admiral Lord Nelson. Buckingham Palace has been the official residence of British monarchs since the reign of Queen Victoria.

London is famous for its wonderful museums and art galleries. In British Museum one can see ancient paintings, sculptures and even Egyptian mummies. London's National Gallery has the greatest collection of paintings of Van Gogh, Leonardo da Vinci, Renoir and many others. The Natural History Museum boasts its fabulous dinosaur exhibition. Tate Modern is a unique museum with the works of Picasso, Dali and other modern artists. The Science Museum is a technology thought-provoking museum with interactive galleries devoted to many fields of science: from space travel to psychology.

As for the entertaining, it is impossible to get bored in London. The best places for quiet relaxation are traditional English parks and gardens. The tourists' favourites are Kew Gardens, Hyde Park, St. James's Park, Green Park and Kensington Gardens. Right in the heart of the capital we can find London Zoo and London Aquarium. In Madame Tussauds Museum visitors will meet face to face with hundreds of celebrities: from Shakespeare to Lady Gaga because it's an amazing collection of wax figures. Warner Bros. Studio Tour is an unbelievable behind-the-scenes tour where we can enjoy the magic of the Harry Potter films. The London Eye is a giant wheel that carries its visitors in one of its capsules for breathtaking experience above the city and its attractions.

12. TELEVISION ADVERTISING

Everything we eat, wear or use is often dictated to us through commercial advertising. One of the most powerful forms of advertising is television. It provides an excellent chance for companies to promote and sell their products. It is an easy and effective way to let people from all over the world know about certain brands and attract their interest. To my mind television is able to sell different goods like no other mass medium can.

Some people find TV commercials rather annoying. Advertisers use the concept of repetition in order to promote goods, services, ideas and to awake the desire of purchasing. Besides, people usually get nervous when their favourite film or programme is constantly interrupted by endless ads.

To spend a day without television is almost impossible for a child or teenager living in the 21st century. A number of hours a modern child spends in front of TV is enormous. Adults also depend greatly on TV news, weather reports, sports or entertaining programmes. Advertisers choose the particular time of the day and specific programmes to gain attention of their target audience. For instance, a cartoon show will break for commercials advertising toys, cereals or chocolate for children. Or a soap opera will target women with ads of make-up products or household cleaners. Luckily alcohol and tobacco advertising is banned on TV in our country.

Children and youth are easily influenced and sometimes naive, so I believe that television ads should send only positive and healthy messages. Sex, violence or racism should be banned during TV commercials. Many food companies advertise unhealthy snacks, sugary cereals or fast food. It affects children's food choices and increases rates of childhood obesity.

Television advertising plays an important role in our lives. It influences our views and preferences unconsciously. We often choose this or that chewing gum, for example, because of the colourful TV commercials which convince us, as potential buyers, of its best qualities. Moreover, by exploiting celebrities, fashion or sports icons advertising companies make a huge impact on their consumers and promote their products even more effectively.

13. OUR LIFE WITHOUT TELEVISION

Today there is at least one television set in every house. Watching television has become an essential part of our everyday life. We come home from school or work and turn on the TV. It's our usual and comfortable background while cooking dinner or cleaning up the house. We can also just relax on a couch with a remote control in our hands looking for some nice programme or a film.

It's rather difficult to say if television is good or bad for us. It offers a great variety of informational and entertaining channels able to satisfy any taste. We love watching TV

news, reality shows, concerts, quiz-shows, sports events, movies or soap operas. Television educates us about everything. It is a convenient source of information about current affairs and the latest achievements around the world.

We can hardly imagine our life without television nowadays. Unfortunately modern teachers claim that reading has almost vanished from the life of the young generation due to television. People are too busy working, surfing the Internet and watching TV. Besides, doctors claim that childhood obesity is rapidly becoming a global problem because of spending passive hours in front of TV or computers. A lot of parents are worried by the impact of constant sex and violence on the screen.

So what would our life be like without this popular electronic device? I think we could spend more quality time together with our families and friends going to theatres, picture galleries, enjoying long walks in the parks and doing sports. We could socialize with each other and participate in each other's lives. Parents could devote their free time to their children, playing and reading books together. But I am afraid I can only dream of such a world.

14.INTERNET IN OUR LIFE

Just a century ago we didn't even know about computers and the Internet. But today we take them for granted and can't imagine our life without these inventions. I think that the Internet (or WorldWideWeb) is the greatest invention ever and it has made a significant impact on our lives.

Nowadays the Internet is affordable almost for anyone and it connects people all around the world. You can stay in touch with your friends, relatives and colleagues. Our modern life will stop without the net because it helps to make on-line business transactions, manage our bank accounts, pay our gas or electricity bills and send important e-mails, for example.

The Internet is the largest source of information. There are millions of Internet sites storing plenty of useful data about everything: science, history, psychology, sports, fashion, music, cooking and many other subjects. We can also download our favourite movies or songs, listen to radio channels or play games. Learning or practising foreign languages is possible with the Internet too.

The Internet saves our time and money. We can do on-line shopping choosing the desirable thing at the best price. And then we just click “Order the delivery”. By the way, we can also sell various things in the net. We often don’t need to go to the library: surfing the net can easily help us to find and open the book we need. Buying stamps and envelopes isn’t required if you’re going to send an e-mail. It takes just a few seconds to send an instant message by e-mail.

The Internet helps shy people or those with low-esteem to find each other on dating sites. On-line chatting through social networking websites is more comfortable for Internet users with the lack of social skills.

I am sure that the Internet has changed our life for the better. There is only one disadvantage about it: some people become rather addicted to it and spend all days long surfing the net, on-line dating or playing games. Over-using the net can be dangerous because new technology victims start neglecting their families, friends, work and real hobbies.

15. CHRISTMAS IN THE UK AND THE USA

Christmas is a favourite time of the year for many Christian people. It is celebrated by many cultures and religions. This is the holiday when families come together and celebrate the birth of Jesus, love, peace and kindness. Catholic Christmas is celebrated in Europe, Australia and America on the 25th of December. However all preparations for this day start long before the date.

Christmas is rich in traditions which make this holiday very special for everyone. One of the most favourite traditions among children is decorating their houses, gardens and Christmas trees with colourful garlands, mistletoe wreaths, ornaments, gingerbread men, dazzling stars and artificial snow. Evergreen trees are symbols of eternal life, and mistletoe traditionally symbolizes love. The next tradition is writing a letter to Santa Claus and waiting for him and his reindeer with a bag full of presents in a sleigh. Children hang up stockings near their beds or by the fire-place hoping that Santa Claus will come at night and fill them with sweets, fruits and nuts.

On Christmas Eve people send holiday cards and visit their friends in order to exchange presents and good wishes. In the centre of London, in Trafalgar Square British people gather around the huge Christmas tree. Many of them attend church services on Christmas Eve. Singing Christmas carols to commemorate Christ’s birth is also one of the oldest Catholic traditions. In America the biggest Christmas tree is usually lit up in New York, at Rockefeller Centre.

A big festive dinner is the most delicious meal of a year. People enjoy traditional plum puddings, stuffed turkey, mashed potatoes and pumpkin pies.

The warmth and joy of Christmas makes people much better. A lot of people help the poor, they organize festive dinners for the homeless.

16. TRADITIONAL ENGLISH FOOD

Traditional English food has been greatly influenced by other national cuisines in recent years. Despite this fact, if you travel to Britain, you can still be served up traditional English dishes in a restaurant or at a hotel.

A typical English breakfast is usually quite big and substantial. It includes pork sausages, bacon and eggs, tomatoes, baked beans, mushrooms and a toast. Some people enjoy porridge, fruit and yogurt in the morning, followed by a toast and jam, or orange marmalade. A traditional breakfast drink is tea, which British people prefer having with cold milk. Another popular morning drink is orange juice.

For many Englishmen lunch is a fast meal. In big cities there are a lot of sandwich bars where office clerks can choose all sorts of sandwiches with meat, fish, chicken, ham, prawns, eggs, cheese, vegetables and lettuce. English pubs also serve good food for lunch, hot and cold. Quite a lot of workers go to famous “fish and chips shops” and buy their favourite deep fried cod or haddock with French fries.

A lot of Englishmen drink their 5 o’clock tea. It’s a traditional light meal after work. People enjoy their favourite teas with cookies, cakes, freshly baked sweet buns, scones and other pastries.

British people eat their evening meal at about 7 o’clock, when all members of the family are at home together. As a rule, a typical dinner is meat and vegetables. It can be roast chicken or lamb with potatoes, or steamed vegetables with meat gravy. For dessert, English wives cook various puddings and serve them with ice-cream or jam.

On Sundays British families like to sit together at the table enjoying roast beef, lamb or chicken, served with Yorkshire pudding and dressed with English mustard, apple sauce, cranberry sauce or mint sauce.

English food is simple but very delicious. Today it continues to merge in national cuisines from all over the world.

17. INVENTIONS IN OUR LIFE

From space shuttles to eye-glasses, from air-conditioning to the Internet – inventions of the last centuries have completely transformed our lives and our world. The era of fascinating discoveries has changed the way we communicate, the way we spend our free time. The machine gun has made our world more dangerous, the parking meter – more expensive and refrigerators have changed our eating habits. We can’t imagine our life without electricity and domestic electric appliances today such as microwave ovens, toasters, washing-machines, dish-washers, vacuum cleaners, irons and many others. Our world is also impossible without modern means of transport: cars, trains, ships or airplanes.

I am really amazed by the greatest medical inventions of penicillin, anaesthetic, contact lenses, X-rays and many others. Penicillin is the name of an antibiotic that is used to kill dangerous bacteria in our bodies. This medicine was discovered in 1928 by

Alexander Fleming. Many people worldwide stopped dying when their wounds had got infected. Of course, it is impossible to count how many lives have been saved by penicillin, but some estimate that it is about 200 million. As for X-rays, they were discovered by Wilhelm Rontgen in 1895 by accident. X-ray machines produced images of different parts in the human body. And since then they have been widely used for analyzing problems with bones, teeth and organs. Today they are also used at airports for luggage inspection.

I must say that some inventions are quite strange and funny. Among them are food fans (for making your hot food cool enough to eat), heated toilet seats or devices that translate dog barking. As for weapons, cigarettes and fast food, I believe they are the worst mankind inventions. Modern inventions should make our life easier and better, but they must not cause health problems or destroy our planet.

18. TRAVELLING

The best way to break the monotony of our life and learn a lot about different places and cultures in the world is travelling. I think that our modern life is impossible without travelling. People get tired of their daily routine, they need to change the surroundings. So they go to a travel agency, buy tickets to some nice place, pack their suitcases and set off on a journey.

Travelling has a great educational value because it is a chance to meet new people, visit museums and ancient sights, discover different ways of life, taste national cuisines and practice foreign languages. It makes us more appreciative of other cultures. The best way to study geography is to go to distant countries and cities.

We can travel by different means of transport: by plane, by ship, by train, by car and even on foot. It depends on our plans and preferences. Plane is the fastest but the most expensive means of transport. Travelling in a modern train can be very comfortable and enjoyable. We can admire picturesque landscapes from the window and communicate with our companions. When we travel by car we don't have to buy any tickets or book a hotel, we can stop wherever we want and stay there as long as we like. Travelling on foot (or hiking) is quite popular among young people. It's really exciting to walk in the countryside enjoying the beauty of hills and valleys, lakes and forests.

My parents spend their holidays travelling too. I was only 4 years old when they first took me to Turkey. That was an unforgettable holiday by the sea. We swam and sunbathed, went sailing and fishing. And we took plenty of beautiful pictures there.

Travelling is great! It can give you a great deal of pleasant emotions and memories. It's the time for relaxation and thinking. People often return home with a fresh outlook on life and a fantastic zeal to do something good. And they usually say: "East or West – home is best."

19. BRITISH TRADITIONS AND CUSTOMS

Every nation becomes special by means of its own traditions and customs. There is no other nation that clings to the past with the tenacity of the British. They are really proud of their traditions, they cherish them. When we think of Britain we often think of people drinking white tea, eating fish and chips, sitting by the fireplace or wearing bowler hats, but there is much more in Britain than just those things. Some British traditions are royal, such as the Changing of the Guard which takes place every day at Buckingham Palace. The Trooping of the Colour happens on the Queen's official birthday. It's a big colourful parade with hundreds of soldiers and brass bands.

British holidays (Christmas, Easter, Guy Fawkes Night, Remembrance Day) are especially rich in old traditions and customs. A traditional Christmas dinner consists of roast turkey and potatoes, cranberry sauce, sweet mince pies and Christmas pudding. On Christmas Eve children hang up their stockings around the fireplace for Father Christmas to fill with presents. At Easter chocolate eggs are given as presents symbolizing new life. Guy Fawkes Night is also known as Bonfire Night because English people burn stuffed figures on bonfires. On Remembrance Day red poppies are traditionally worn in memory of servicemen who lost their lives in wars. National Morris Dancing can be seen throughout the month of May in most of English villages. Groups of men and women wear coloured costumes, carry white handkerchiefs and perform their lively folkdance.

One of Englishmen's traditions is their tender love for animals. Pets are members of English families and are protected by law. There are even special cemeteries for animals in Great Britain. Most English people love their gardens too. They enjoy gardening and decorating their houses with beautiful flowers and plants.

Sports play an essential part in the life of Britain and it is a popular leisure activity. Rugby, golf, cricket, polo and horse-racing are British national sports and they are played on village greens and in towns on Sundays.

Politeness and punctuality are typical features of all British people. They often say "Sorry", "Please" and "Thank you" with a smiling face and they always try to arrive on time.

The British are also traditional about their breakfast. They usually eat bacon and eggs, a toast with orange jam, a bowl of cereals or porridge in the morning.

There are over 60 thousand pubs in the United Kingdom. Pubs are an important part of British life too. People talk, eat, drink, meet their friends and relax there.

20. GLOBALIZATION: PROS & CONS

Globalization is a process of interaction between people, companies and government of different nations. It is driven by international trade and the development of information technology. We observe its results in all spheres of our life. It has great influence on our environment, culture, political and economic systems. Globalization can be described as movement of people, goods, investments, labour and ideas all over the world. Of course it's impossible to define whether globalization is

good or bad. It has both pros and cons. Some people just hate globalization and find it threatening for national cultures. Others believe that free trade between countries offers prosperity and economic growth for all nations and businesses.

Today we know a lot of world-famous brands. Wherever we are, we are likely to have lunch at a fast-food restaurant McDonald's. We can find Coca Cola or Lipton tea at any store. And these products are offered almost in every country. Multinational companies create additional work places for local people. But there is a negative side here because it's hard for small domestic firms to compete with worldly recognized companies. That's why they often incur great losses.

Globalization gives me freedom in choosing a place for holidays, in purchasing goods made in a country I prefer most. We can easily get acquainted with other traditions, customs and national cuisines. Living in Russia, for example, we can try new dishes in Japanese, Italian or Georgian restaurants. But on the other hand, little by little we forget about our own culture and the youth starts losing old traditions. Globalization destroys cultural identity.

Another benefit of globalization is advances in information technology. Thanks to the Internet I can get almost any information I need. It helps me with my education and with my studies at the university too. We can participate in international educational programs, communicate with pen-friends from other countries, apply for a piece of advice to any professional through the Internet.

Another advantage of the era of globalization is that I have an opportunity to get closer to my friends and distant relatives by sending messages and exchanging photos and videos. However the Internet completely transformed our communication and we meet each other in reality less and less nowadays.

21. FASHION AND MY ATTITUDE TO IT

Fashion has always had a huge influence on people around the world. The main reason why we try to follow the latest fashion trends is a desire to look stylish, attractive, popular and more confident. Generally people judge a new person by his appearance and his clothes and only then, by his inner qualities. There is a proverb: "Good clothes open all doors." That's why we do our best to make a favourable impression on others. We spend a lot of money to keep up with fashion and buy designer clothes.

Fashion often means style, glamour and success. It is also a big business. It's hard to resist the temptation to buy some brand-name clothing in our modern world. Every day we pass by colourful shop-windows, we see plenty of ads everywhere: on buses, billboards, TV and in magazines. Many teenagers pay too much attention to their friends' and classmates' appearance. Sadly, if some parents are not able to afford buying trendy clothes with fashion labels, their kids often become outsiders. So clothes usually separate people into social groups.

In my opinion every person can have his own style and look unique. He should choose clothes according to his taste, age, job, constitution and character. I am glad to

say that I don't pay so much attention to fashion and I am not its victim. I don't care too much about what other people wear. The most important thing for me in the outlook is neatness, natural look and beauty. And it should certainly suit the occasion. I must admit that some fashionable clothes are quite ridiculous and impractical. There was a time, for instance, when young people wore baggy clothes, shoes on enormous platforms, red hair, black fingernails and bright make-up. To my mind, it was just a silly waste of money. Besides, if a person doesn't have a good taste he is not able to put things together and look attractive and stylish even in fashionable clothes.

22. EDUCATION IN THE USA

The system of education in the USA varies greatly from state to state. School education in so called state public schools is free. Parents are free to choose any public school for their children. Although there are a lot of private schools, mainly religious, and parents have to pay for them. A school year starts in September and ends in June. It is divided into three terms or four quarters.

American children start attending elementary schools at the age of 6. They continue their studies for eight years there (8 grades). Their basic subjects in the curriculum at this stage are English, Arithmetic, Natural Science, History, Geography, Foreign Language and some others. After that pupils may enter a Senior high school or if they go to a 5- or 6-year elementary school, they then attend a 3- or 4-year Junior high school, and then enter a Senior high school. Pupils graduate from high schools at the age of 18. The high schools (also known as secondary schools) are generally larger and accommodate teenagers from four or five elementary schools. During the school year the students study four or five selective subjects according to their professional interests. They must complete a certain number of courses to receive a high school diploma or a certificate of school graduation.

In order to develop social skills and encourage students' participation in extracurricular activities every high school has an orchestra, a music band, a choir, drama groups, football, basketball and baseball teams. School becomes the centre of social life for students.

At American colleges and universities young people get higher education. They study for 4 years and get a Bachelor's degree in arts or science. If a student wants to get

a Master's degree he must study for two more years and do a research work. Students who want to advance their education even further in a specific field can pursue a Doctor degree. The most famous American universities are Harvard, Princeton, Stanford, Yale, Columbia Universities.

23. STONEHENGE

A circular group of massive, upright stones, the Stonehenge monument was once thought to have been a type of astronomical clock or calendar for predicting the seasons. The early belief that the monument was built as a temple for sky worship has never been definitively proved. Even more fanciful was an earlier notion that Stonehenge was connected with the Druids, a caste of Celtic priests.

Stonehenge was built between 3100 and 1550 BC about 8 miles (13 kilometers) north of Salisbury, England. Beginning in 1919, London's Society of Antiquaries carried out a series of excavations at the site that form the basis for most contemporary scientific understanding of Stonehenge's history and purpose.

According to evidence unearthed in the excavations, there were three main periods of building. The first period, beginning in about 3100 BC during the late Neolithic Age, included the digging of a circular ditch and a ring of 56 pits, now known as Aubrey Holes.

During the second period, probably about 2100 BC, huge pillars of rock were brought from southwestern Wales and erected in two concentric circles around the center of the site. The double circle was never completed and was dismantled during the following period. The monument was remodeled in the third period. A circle was erected of 30 upright stones weighing up to 50 tons each and capped by a ring of stone lintels. These enclosed a horseshoe-shaped formation of five pairs of stone uprights, each pair capped with a stone lintel. Subsequent changes involved adding, removing, and rearranging stones that had been used during the second period. This final phase of building probably ended before 1500 BC.

The 35-ton heel stone was possibly placed during the second period. Its placement was one of the most sophisticated accomplishments of that age and provides the best evidence that early people used astronomy. On Midsummer Day (June 24) a person standing in the center of the circle can see the sun rise directly above the heel stone.

Some scientists believe that early peoples were able to foretell eclipses of the sun and the moon by the positions of these celestial bodies in relation to the stone monument. The site may have served as an observatory where early rituals or religious ceremonies took place on specific days of the year. There are hundreds of similar structures throughout Britain.

24. STUDENT'S EXPERIENCE

I am a student. Yes, one of those shaggy, fashionable types who clog up Starbucks, drink far too often and are slowly figuring out that the more they learn, the less they know. I could list stereotypes like this all day long and my English readers would keep nodding away, but to a Russian reader, the concepts that we associate with student life may seem very alien indeed.

From September of last year till early December, I studied at the Philological Faculty of Petrozavodsk State University in the north-west of Russia. I sampled student life from a completely different angle and my observations provoked one of my more serious blog posts: The cat, the classroom and the caviar... In short, Russian student life reminded me of school so much so that my fellow English students and I began to refer to our course precisely in those terms.

Let me be more specific. Students are timetabled into classes run by their faculty. As such, they treat professors and academics as teachers, which completely alters the dynamic and power structure of the institution. At British universities, we are free to pick which lectures we attend and while science and language degrees have compulsory classes, we seem more aware of the scope and size of our chosen subject. We are free to favour one academic's angle over another's and can even avoid a certain lecturer altogether if we feel they aren't teaching the subject properly or hold an opinion on it that we disagree with. In Russian universities, there seems to be less democracy. Timetabling backs up a sense of the impenetrability of the world of academia where an undergraduate voice is up against an even greater wall of opposition rigidly built out of scheduling and academic pomp.

The university environment seemed to be completely different too. We are used to sprawling campuses and colleges – places where we are given the freedom to amble about. We are often required to cross whole cities just to get to our next appointment. The British student's world is thus one of simulated reality, and our university is a looser institution that promotes personal growth and organisation by including in its education the need to orientate oneself and manage time. The Russian student often faces closed-off buildings structured like schools with rows and rows of classrooms, a lunch hall and a gym. They meet in groups in its corridors, wearing backpacks with packed lunches in them. They sometimes have compulsory sports lessons on the playing fields and or astro-turf.

Perhaps I am being unfair. I have only personally attended one Russian university and since arriving in Moscow my opinions garnered in rural Russia have changed a lot. My flatmate is a recent graduate of Moscow State University and he frequently recalls anecdotes of his university days, many of which chime with my own. He recalls the fun of quasi-independent living in halls of residence where oversleeping, hung-over students would miss lectures and classes. He recalls having to rush desperately across Moscow to his next class in another building. He remembers how infrequently he kept in touch with

his parents back home in Kazakhstan. He mentions student club nights, protests and debates. Overall he seems far older, wiser and savvier than some of the students I met in Petrozavodsk, who still live with their parents and maintain the sixth-form mentality from the final two years of school. Then again, this is Moscow and as many people like to tell me: “It’s just not *real* Russia.”

25. WHY DO WE STUDY THE ENGLISH LANGUAGE?

In his preface to *The Cambridge Encyclopedia of the English Language*, David Crystal examines the question “Why study the English language?” and offers six good reasons for it. Here they are:

Because it’s fascinating. It is remarkable how often the language turns up as a topic of interest in daily conversation – whether it is a question about accents and dialects, a comment about usage and standards, or simply curiosity about a word’s origin and history.

Because it’s important. The dominant role of English as a world language forces it upon our attention in a way that no language has ever done before. As English becomes the chief means of communication between nations, it is crucial to ensure that it is taught accurately and efficiently, and to study changes in its structure and use.

Because it’s fun. One of the most popular leisure pursuits is to play with the English language – with its words, sounds, spellings, and structures. Crosswords, Scrabble®, media word shows, and many other quizzes and guessing games keep millions happily occupied every day, teasing their linguistic brain centres and sending them running to their dictionaries.

Because it’s beautiful. Each language has its unique beauty and power, as seen to best effect in the works of its great orators and writers. We can see the 1,000-year-old history of

English writing only through the glass of language, and anything we learn about English as a language can serve to increase our appreciation of its oratory and literature.

Because it's useful. Getting the language right is a major issue in almost every corner of society. No one wants to be accused of ambiguity and obscurity, or find themselves talking or writing at cross-purposes. The more we know about the language the more chance we shall have of success, whether we are advertisers, politicians, priests, journalists, doctors, lawyers – or just ordinary people at home, trying to understand and be understood.

Because it's there. English, more than any other language, has attracted the interest of professional linguists. It has been analysed in dozens of different ways, as part of the linguist's aim of devising a theory about the nature of language in general. The study of the English language, in this way, becomes a branch of linguistics – English linguistics.

Text 1. Chernobyl Accident

Chernobyl Accident, accident at the Chernobyl nuclear power plant in the Ukrainian republic of the Union of Soviet Socialist Republics (USSR) that produced a plume of radioactive debris that drifted over parts of the western USSR, Eastern Europe, and Scandinavia. The accident, which occurred on April 26, 1986, was the worst nuclear power accident in history. Large areas of the Ukrainian, Belorussian, and Russian republics of the USSR were contaminated, resulting in the evacuation and resettlement of roughly 200,000 people. The accident raised concerns about the safety of the Soviet nuclear power industry, slowing its expansion for a number of years, while forcing the Soviet government to become less secretive. The now independent countries of Ukraine and Belarus have been burdened with continuing and substantial costs for

decontamination and health care because of the Chernobyl accident of the largest in the USSR.

It was located just outside of the town of Pripjat, about 18 km (11 mi) northwest of the town of Chernobyl. The plant was only 16 km (10 mi) from the border between the Ukrainian and Belorussian republics and roughly 110 km (70 mi) north of Kyiv (Kiev), the capital and largest city of Ukraine. Construction of the plant began in the 1970s, with reactor No. 1 commissioned in 1977, followed by No. 2 (1978), No. 3 (1981), and No. 4 (1983). Each reactor had an electricity generating capacity of 1,000 megawatts, and the four together produced about 10 percent of Ukraine's electricity at the time of the accident. Two more reactors (No. 5 and No. 6, also capable of producing 1,000 megawatts each) were under construction at the time of the accident.

In the early morning hours of April 26, 1986, reactor No. 4 was operating at very low capacity (6 to 7 percent) during a planned shutdown. Plant personnel intended to monitor the performance of turbine generators, which supplied electric power for the plant's own operation, during a changeover from standard to a backup source of power. The reactor's design made it unstable at low power, and the operators were careless about safety precautions during the test. After a sudden power surge, two explosions destroyed the reactor core and blasted a large hole in the roof of the reactor building.

Text 2. Extreme sports

Why do many people go in for extreme sports? Why do they consciously endanger their lives? The desire for overcoming one's fears moves us from childhood Or when you climbed a high tree? Some people outgrow this desire to get a rush of adrenaline and begin to live measured life denying the thought of putting their lives into danger, other people continue searching for opportunities to experience strong emotions, and, at last, some individuals do extreme sports.

One of the most dangerous activities is presented by jumping from various high objects. As usual, these objects are not higher than 600 meters. It can be a house, a bridge or a rock. Jumpers use special parachutes for this kind of sport. Base jumping, as it is

sometimes called, is much more dangerous than traditional parachute sport, where sportsmen jump from 4 thousand meters from a plane. You have less time to concentrate and make necessary movements.

Vulcanoboarding is a very extraordinary extreme sport. It is similar to snowboarding with one difference: there is hardened lava instead of snow under your legs. Sportsmen feel the warmth from the surface of the slope. A special thrill is given by the awareness that it is an active volcano, ready to erupt every second. Vulcanoboarding is a really exotic sport for lovers of bright emotions.

Surfing is a popular sport for people who live near the ocean and those who choose to spend their vacations near the bay with big waves. Some fans of this activity travel all around the world to catch giant waves. It is a great chance not to manage with great mass of water. Moreover, there is a chance to meet a shark.

Climbing is also very dangerous. You should have strong fingers and hands to climb cliffs and rocky mountains. While climbing you need to search ledges to grab and catch up on the hands. Sometimes sportsmen use ropes for safety, but sometimes it's impossible to fix, so they risk their lives.

People do not get tired to come up with new types of extreme sports. Fantasy and a thirst for new experiences encourage people to open new horizons.

Text 3. Japan earthquake: Explosion at Fukushima nuclear plant

A powerful explosion has hit a nuclear power station in north-eastern Japan which was badly damaged Friday's devastating earthquake and tsunami. A building housing a reactor was destroyed, but authorities said the reactor itself was intact. The government sought to play down fears of a meltdown at the Fukushima 1 plant. But officials later announced the cooling system of a second reactor at the plant had failed. A huge rescue and relief operation is under way in the region after the earthquake and subsequent tsunami, which are thought to have killed more than 1,000 people.

Tokyo Electric Power said four of its workers had been injured in Saturday's blast at Fukushima, 250 km (155 miles) north of Tokyo, but that their injuries were not life-threatening. An evacuation zone around the damaged nuclear plant has been extended to 20 km (12.4 miles) from 10km, and a state of emergency declared. An estimated 200,000 people have been evacuated from the area, the International Atomic Energy Agency says. The government has urged residents to remain calm and is preparing to distribute iodine to anyone affected.

Tests showed at least three patients evacuated from a hospital near the plant had been exposed to radiation, public broadcaster NHK quoted local government officials as saying. They were among a group of people waiting outside the hospital for rescue helicopters when the explosion hit the plant. Government spokesman Yukio Edano said the force of the explosion had destroyed the concrete roof and walls of a building around the plant's number one reactor, but a steel container encasing the reactor had not been ruptured. Mr Edano said radiation levels around the plant had fallen after the explosion. He added that sea water was being pumped into the site to lower temperatures.

Before the explosion, Japan's nuclear agency had said that radioactive caesium and iodine had been detected near the number one reactor. Air and steam, with some level of radioactivity, was earlier released from several of the reactors at both plants in an effort to relieve the huge amount of pressure building up inside.

Text 4. Epidemics, Pandemics, and Outbreaks

You probably know that COVID-19, the illness caused by the new coronavirus SARS-CoV-2, is a pandemic. But what's the difference between a pandemic, an epidemic, and an outbreak? And when does a disease become a public health concern? Here are the basics of the spread of serious diseases and what you can do to protect yourself, your family, and your community.

Let's start with the meanings of each word.

An **outbreak** is when an illness happens in unexpected high numbers. It may stay in one area or extend more widely. An outbreak can last days or years. Sometimes, experts consider a

single case of a **contagious disease** to be an outbreak. This may be true if it's an unknown disease, if it's new to a community, or if it's been absent from a population for a long time.

An **epidemic** is when an infectious disease spreads quickly to more people than experts would expect. It usually affects a larger area than an outbreak.

A **pandemic** is a disease outbreak that spreads across countries or continents. It affects more people and takes more lives than an epidemic. The World Health Organization (WHO) declared COVID-19 to be a pandemic when it became clear that the illness was severe and that it was spreading quickly over a wide area.

The number of lives lost in a pandemic depends on:

- How many people are infected
- How severe of an illness the virus causes (its virulence)
- How vulnerable certain groups of people are
- Prevention efforts and how effective they are

The WHO's pandemic alert system ranges from Phase 1 (a low risk) to Phase 6 (a full pandemic):

- **Phase 1:** A virus in animals has caused no known infections in humans.
- **Phase 2:** An animal virus has caused infection in humans.
- **Phase 3:** There are scattered cases or small clusters of disease in humans. If the illness is spreading from human to human, it's not broad enough to cause community-level outbreaks.
- **Phase 4:** The disease is spreading from person to person with confirmed outbreaks at the community level.
- **Phase 5:** The disease is spreading between humans in more than one country of one of the WHO regions.
- **Phase 6:** At least one more country, in a different region from Phase 5, has community-level outbreaks.

Text 5. Mountain climbing

Mountain climbing, ascending mountains, most commonly as a recreational activity. Mountain climbing is popular worldwide, wherever hills rise high enough to provide challenge. The activity's rewards include the physical exertion it requires, the satisfaction of overcoming difficulties by working with others, the thrill of reaching a summit, unobstructed view from a mountaintop. Exploration

and research are other reasons that people climb mountains. Ascents can be either *nontechnical* (a hike up a path or a scramble over rocks, not requiring the safety of a rope), or *technical* (a climb up more difficult terrain that requires the use of rope and other specialized equipment). This article focuses on technical climbs, which involve all the elements of simple hikes but also require advanced knowledge and equipment.

Making technical climbs is also known as *mountaineering*. Since ancient times, people have viewed mountain peaks as towering objects of myth, spiritual inspiration, and romantic beauty. Early peoples made ascents only to hunt game, to rescue lost or strayed animals, or to gain a military advantage over an enemy. Eventually, the unknown and inaccessible ceased to be something to be feared and avoided, and the conquest of the major mountain peaks and ranges of the world began. Mountaineering as a sport was born on August 8, 1786, with the first ascent of Mont Blanc (4807 m/ 15,771 ft), one of Europe's tallest peaks. Since that ascent, mountain climbing has evolved into three related sports: alpine climbing, ice climbing, and rock climbing. These sports require the same fundamental techniques.

Experienced climbers prepare for a climb by buying a topographical map and a regional guidebook with charts of the expected terrain and descriptions of the mountain's approach trails. Climbers begin major ascents by hiking to the base of the mountain, where they set up an overnight camping spot, known as a *base camp*. Early the next morning, they begin their ascent. On climbs that last only one day, experienced climbers attempt to reach the summit by noon, before afternoon thunderstorms, lightning, hail, and rain increase the danger of the climb. Climbers also make sure they have enough daylight to *rappel* (slide in a controlled fashion down climbing ropes) back to the mountain's base and reach base camp before dark. On rare occasions climbers are caught in the dark and must resort to headlamps or flashlights to find their way back to camp. On ascents that last more than one day, an early start gives climbers enough time to set up their next camp on the

mountain before nightfall. If there is snow on the route, starting early means that the frozen surface will not melt before the climbers cross it.

Text 6. History of fire

Fire, reaction involving fuel and oxygen that produces heat and light. Early humans used fire to warm themselves, cook food, and frighten away predators. Sitting around a fire may have helped unite and strengthen family groups and speed the evolution of

early society. Fire enabled our human ancestors to travel out of warm, equatorial regions and, eventually, spread throughout the world. But fire also posed great risks and challenges to early people, including the threat of burns, the challenge of controlling fire, the greater challenge of starting a fire, and the threat of wildfires.

As early civilizations developed, people discovered more uses for fire. They used fire to provide light, to make better tools, and as a weapon in times of war. Early religions often included fire as a part of their rituals, reflecting its importance to society. Early myths focused on fire's power. One such myth related the story of Vesta, the Roman goddess of the hearth. To honor Vesta, the high priest of the Roman religion periodically chose six priestesses, called Vestal Virgins, to keep a fire going in a community hearth. Keeping a controlled fire burning played a central part in communal life. Before the invention of modern implements, starting a fire, especially in adverse weather, usually required much time and labor to generate sufficient friction to ignite kindling. If people let their fire go out, they had to spend considerable time to start it again before they could eat and get warm.

The earliest use of fire by humans may have occurred as early as 1.4 million years ago. Evidence for this was found in Kenya — a mound of burned clay near animal bones and crude stone tools, suggesting a possible human campsite. However, this fire could have resulted from natural causes. *Homo erectus*, a species of human who lived from about 1.8 million to about 30,000 years ago, was the first to use fire on a regular basis. Evidence of a fire tended continuously by many generations of *Homo erectus*, dating to about 460,000 years ago, has been found in China. Scientists have also found evidence of tended hearths dating back as many as 400,000 years in several parts of France.

Text 7. Genghis Khan Biography

Genghis Khan (1164 – 1227) was a fierce and brilliant military commander, who achieved unprecedented success in setting up the Mongol Empire which stretched across Europe,

China and Asia. His Mongol armies left a trail of fear, death and destruction. But, he also created a vibrant empire with a common language, booming trade, tolerance of religion and some basic customs and laws.

The young Temujin was born the son of a local tribal leader, Yesugei – sometime between 1163 and 1167. This was a period of turbulence, intermittent warfare and internecine conflict. At a young age, Temujin's father was murdered by rival tribesman; this left Temujin powerless and at the mercy of rival tribes. For a few years, he and his family lived in great poverty. Then in 1177, he was captured by former allies of his father and imprisoned with a wooden head brace. However, on one occasion, sensing a weakness in the guards, Temujin used the wooden head brace to knock out a guard and then through great good fortune and tenacity, he escaped. One anecdote about his escape is that coming across a farm, Khan implored a stranger for a horse. So impressed was the stranger with Khan's presence he helped him escape and pledged life-long loyalty.

At the age of 16, he married his childhood bride Borte, whom he had great admiration for. Shortly after the marriage, Borte was kidnapped, but Temujin was able to call on some friends to lead a rescue operation. This was successful, and although Borte was found to be with child, Temujin would bring up the child as if it was his.

One of his most important early victories was leading a small unit and allies in defeating the Merkit tribe who bore a grudge against Temujin. Temujin routed his opponents and proceeded to kill all people taller than a cart axle. It was typical of Temujin's ruthlessness and determination to quell any possible rebellion by having potential rebels killed.

With the backing of the three strongest tribes, in 1206 Genghis Khan was now able to unify the various Mongol tribes into a united nation and one of the most impressive war machines ever assembled. It was at this council meeting that Moghul tribesmen declared Temujin as 'Genghis Khan – meaning 'Oceanic Ruler of the Universe.'

However, unifying local tribes was only a starting point for Khan. Genghis Khan had a tremendous ambition to conquer and plunder loot. He first turned his attention to the powerful Chinese empire, who was at the time divided by internal conflict. He was successful in capturing the Tangut Kingdom and then conquering the Jin Empire in 1211. In 1215, he captured the ancient city of Beijing and effectively gained the obeisance and surrender of the Chinese. This allowed him to turn his attention to the West and Genghis Khan led his Mongol armies west – deep into the heart of Europe – spreading fear and destruction.

Text 8. First Aid

First aid, emergency care for a victim of sudden illness or injury until more skillful medical treatment is available. First aid may save a life or improve certain vital signs including pulse, temperature, a patent (unobstructed) airway, and breathing. In minor emergencies, first aid may prevent a victim's condition from worsening and provide relief from pain.

First aid must be administered as quickly as possible. In the case of the critically injured, a few minutes can make the difference between complete recovery and loss of life. First-aid measures depend upon a victim's needs and the provider's level of knowledge and skill. Knowing what not to do in an emergency is as important as knowing what to do. Improperly moving a person with a neck injury, for example, can lead to permanent spinal injury and paralysis.

Despite the variety of injuries possible, several principles of first aid apply to all emergencies. The first step is to call for professional medical help. Determine that the scene of the accident is safe before attempting to provide first aid. The victim, if conscious, should be reassured that medical aid has been requested, and asked for permission to provide any first aid.

Next, assess the scene, asking bystanders or the injured person's family or friends about details of the injury or illness, any care that may have already been given, and preexisting conditions such as diabetes or heart trouble. The victim should be checked for a medical bracelet or card that describes special medical conditions. Unless the accident scene becomes unsafe or the victim may suffer further injury, do not move the victim.

Text 9. Fire and advance of civilization

As early people began to live in larger communities and to develop more advanced technologies, fire became a central part of their lives. Fire continues to be essential to humans today, although its presence may be hidden in gas fired ovens and furnaces and thus less noticeable than before.

Thousands of years ago hunter-gatherers (people who lived by hunting and gathering wild food) developed a number of valuable uses for fire. With fire they could remain active after the sun set, protect themselves from predators, warm themselves, cook, and make better tools.

People began using fire as a source of light by taking advantage of the glow of wood-burning fires to continue their activities after dark and inside their dwellings, which were usually natural caves. Eventually people learned to dip branches in pitch to form torches. They created crude lamps by filling a hollowed out piece of stone with moss soaked in oil or tallow (a substance derived from animal fat).

By cooking with fire, prehistoric people made the meat of the animals they killed more palatable and digestible. They learned to preserve meat by smoking it over a fire, vastly decreasing the danger of periodic starvation. Cooking also enabled them to add some formerly inedible plants to their food supplies.

Fire enabled people to make better weapons and tools. In prehistoric times, hunters formed spears from tree branches by burning the tips of the branches and then scraping the charred ends into a point. They used fire to straighten and harden tools made of green wood. People eventually learned to control the spread of a fire by blowing at it through reed pipes. They then used this technique to burn hollows in logs to create cradles, bowls, and canoes.

Text 10. Personal protective equipment (PPE)

Personal protective equipment is protective clothing, helmets, goggles, or other garments or equipment designed to protect the wearer's body from injury or infection. The hazards addressed by protective equipment include physical, electrical, heat, chemicals, biohazards, and airborne particulate matter. Protective equipment may be worn for job-related occupational safety and health purposes, as well as for sports and other recreational activities. *Protective clothing* is applied to traditional categories of clothing, and *protective gear* applies to items such as pads, guards, shields, or masks, and others. PPE suits can be similar in appearance to a cleanroom suit.

The purpose of personal protective equipment is to reduce employee exposure to hazards when engineering controls and administrative controls are not feasible or effective to reduce these risks to acceptable levels. PPE is needed when there are hazards present. PPE has the serious limitation that it does not eliminate the hazard at the source and may result in employees being exposed to the hazard if the equipment fails.^[1]

Any item of PPE imposes a barrier between the wearer/user and the working environment. This can create additional strains on the wearer, impair their ability to carry out their work and create significant levels of discomfort. Any of these can discourage wearers from using PPE correctly, therefore placing them at risk of injury, ill-health or, under extreme circumstances, death. Good ergonomic design can help to minimise these barriers and can

therefore help to ensure safe and healthy working conditions through the correct use of PPE.

Text 11. Poisoning and drug overdose.

A poisonous substance introduced into the body through the mouth or nose causes symptoms such as nausea, cramps, and vomiting. Poisons include toxic medications, herbicides, insecticides, rodenticides, household disinfectants, and noxious gases.

In a case of poisoning, the first-aid provider should remove the victim from a toxic environment, then contact the poison control center listed in most United States phone books. If the number is unavailable, the provider should call a physician or hospital emergency department. If possible, the provider should try to identify the poison, either by questioning the victim or searching for suspicious containers. Containers of many poisonous substances list the antidote, or remedy, on the label. Burns or stains on the skin or a characteristic odor on the breath may also help the first-aid provider recognize the poison.

Unless instructed to do so by the poison control center, the first-aid provider should never give a poisoning victim anything to eat or drink. Vomiting should not be induced unless the poison control center recommends it. If the victim vomits, the first-aid provider should turn the individual on the side and clear the airway. Before clearing the victim's mouth of any obstructions, however, the provider should first put on clean first-aid gloves or wrap a cloth around his or her fingers. If the person who ingested the poison is unconscious, the airway, breathing, and circulation should be checked and CPR started if necessary.

A drug overdose occurs when an individual takes too large a dose of a drug or takes a dose that is stronger than the person can tolerate. A drug overdose can be difficult to diagnose because the signs and symptoms vary widely and often mimic other illnesses or injuries. Symptoms of a drug overdose include unusually dilated or contracted pupils, vomiting, difficulty in breathing, hallucinations, and in severe cases unconsciousness and slow, deep breathing. If an overdose is not treated, the individual may die. Victims of overdose should be taken immediately to a hospital emergency room.

Text 12. Flood

When it rains or snows, some of the water is retained by the soil, some is absorbed by vegetation, some evaporates, and the remainder, which reaches stream channels, is called runoff. Floods occur when soil and vegetation cannot absorb all the water; water then runs off the land in quantities that cannot be carried in stream channels or retained in natural ponds and constructed reservoirs. About 30 percent of all precipitation is runoff, and this amount may be increased by melting snow masses. Periodic floods occur naturally on many rivers, forming an area known as the flood plain. These river floods often result from heavy rain, sometimes combined with melting snow, which causes the rivers to overflow their banks; a flood that rises and falls rapidly with little or no advance warning is called a flash flood. Flash floods usually result from intense rainfall over a relatively small area. Coastal areas are occasionally flooded by unusually high tides induced by severe winds over ocean surfaces, or by tsunamis caused by undersea earthquakes.

Floods not only damage property and endanger the lives of humans and animals, but have other effects as well. Rapid runoff causes soil erosion as well as sediment deposition problems downstream. Spawning grounds for fish and other wildlife habitat are often destroyed. High-velocity currents increase flood damage; prolonged high floods delay traffic and interfere with drainage and economic use of lands. Bridge abutments, bank

lines, sewer outfalls, and other structures within floodways are damaged, and navigation and hydroelectric power are often impaired. Financial losses due to floods are commonly millions of dollars each year.

Text 13. Military Education

The personnel in all branches of the armed services—army, navy, air force, and marine corps—receive both general and specialized training. General training *instills* those qualities that prepare one for a life in the military: physical strength, mental discipline, *self-confidence*, *loyalty*, and the ability to follow the orders of superior officers. Specialized training relates to the career course one will follow while in the service.

United States Army will be used as an example. Enlisted personnel make up the *bulk* of any service branch. Some may remain in the Army for only a few years, while others will become *noncommissioned officers* and make the Army a career. Enlisted personnel received eight weeks of *combat training*. Following combat training they take up specialized training in one of more than 400 courses offered by the Army. This period of education *Enlisted Personnel and Officers. For the sake of clarity*, the type of training given in the lasts from 5 to 44 weeks, depending on which course is selected, at one of 25 Army Service Schools, all of which may be attended by officers, noncommissioned officers, and enlisted personnel. Some of these schools are Armour School, Artillery and *Missile School*, Aviation School, Chemical School, Engineer School, *Infantry School*,

Intelligence School, Management School, Military Police School, *Ordnance School*, two Signal Schools, and Transportation School.

Text 14. My future profession is a teacher of basics of life safety

A teacher of the basics of life safety is a teacher who forms students knowledge of the elements of social and technical security systems, stable motives and needs for taking care of their health, the environment, national security, and organizing a healthy and safe lifestyle.

The profession of a teacher of basics of life safety means to perform non-obvious tasks. The teacher should be engaged not so much in theory as in practice. Its lessons should be useful for students. It is necessary to teach children not only the rules of rescue in case of earthquakes and floods. It is important to share with them the knowledge of how to safely surf the Internet, teach them the nuances of correct response in various situations

More than for other subject teachers, the teacher of basics of life safety needs psychological training, the availability of practical skills of educational and psychological work with people. This requirement is particularly important when the teacher uses active teaching methods, and this is how the teaching of the subject of life as a practically oriented discipline should be built. It is essential to foster an optimistic and active attitude

to life in students. After all, in the process of mastering the program, students have to face descriptions and examples of mostly negative situations: offenses, injuries, disasters, accidents, natural and man-made emergencies.

Text 15. Crowd and riot control

The London police have developed skillful methods of crowd control but have had little experience of urban rioting on the scale with which American police were confronted in the 1960s. Both crowds and riots require patrol officers to adopt a very different approach from that to which they are accustomed. Normally, police are free to handle members of the public in an individual manner. But the control of civil disturbances requires large numbers of disciplined personnel working as a team under unified command.

From their beginnings in 1829, the English metropolitan police were careful not to overreact when handling crowds. In Britain, if the police fail to control a riot, recompense for the damage has to be paid by the police authority for the district. Were the police to use, say, water cannon, an injured onlooker could sue the police for assault. The London police use no riot squads, no protective clothing, no arms, no riot gas, and no barriers for crowd control. The police line has always to be in close contact with the crowd, preventing the stone throwing and violence that occurs when there is a gap between them and the

citizenry. The advantages of the passive police stance encouraged by their legal accountability were exemplified by four London demonstrations in 1967–68 against U.S. policy in Vietnam. At the fourth of these, in an atmosphere made tense by press apprehensions of revolution, some 50,000 people marched through the city. In February 1971 a demonstration of some 140,000 individual workers passed without an arrest.

Disturbances that erupted in more than 50 American cities in 1967 posed serious problems for the police. Most of these disturbances began during the evening watch, when a police department normally has about 13 percent of its uniformed force on duty. At this time, a city with a population of about 500,000, for example, would have had about 95 uniformed police officers on duty.

Text 16. The former Soviet Union Police System

In many countries, changes in the structure of police administration have been in the direction of greater centralization; and it is of interest to consider a country where the change was in the reverse direction. After the death of Joseph Stalin the police force of the Ministry of State Security of the Soviet Union was absorbed into the force of the Ministry of Internal Affairs (MVD) under Lavrenty Beria, who was arrested less than a year later. This force was then divided. The organization dealing with state security was transferred to the Committee of State Security under the Council of Ministers of the U.S.S.R.; known by the initials KGB, it was understood to be primarily a counterintelligence agency. The body that carried out duties performed elsewhere by the normal uniformed police was the militia.

Prior to 1956 it was centralized under the Ministry of the Interior, but in December of that year the administration was decentralized. Units were subject to control by the higher organizations of the militia, by the soviet of the local administrative area, by the local

representative of the procurator general of the U.S.S.R., and by the courts. In 1960 the MVD was abolished, and in some areas the militia was itself replaced by Public Order Detachments made up of workers, builders, farmers, teachers, and students. Two and a half million citizens were enrolled into these detachments as voluntary militia. Two years later these new detachments were being criticized in the Soviet press for using their powers in too high-handed a way. To the outsider it seemed as if the Soviet Union had found that a highly centralized police service was not accountable to the public and that better responsiveness required drastic decentralization, even to the extent of occasionally relying upon citizen volunteers.

Text 17. The modern terrorism

Formerly terrorism used to be applied to acts of violence by a state against its domestic enemies, but since the 20th century the term has been applied most frequently to violence aimed, either directly or indirectly, at governments in an effort to influence policy or topple an existing regime.

Terrorism is not legally defined in all jurisdictions; the statutes that do exist, however, generally share some common elements. Terrorism involves the use or threat of violence and seeks to create fear, not just within the direct victims but among a wide audience. The degree to which it relies on fear distinguishes terrorism from both conventional and guerrilla warfare. Although conventional military forces invariably engage in psychological warfare against the enemy, their principal means of victory is strength of arms. Similarly, guerrilla forces, which often rely on acts of terror and other forms of

propaganda, aim at military victory and occasionally succeed (e.g., the Viet Cong in Vietnam and the Khmer Rouge in Cambodia). Terrorism proper is thus the systematic use of violence to generate fear, and thereby to achieve political goals, when direct military victory is not possible. This has led some social scientists to refer to guerrilla warfare as the “weapon of the weak” and terrorism as the “weapon of the weakest.”

In order to attract and maintain the publicity necessary to generate widespread fear, terrorists must engage in increasingly dramatic, violent, and high-profile attacks. These have included hijackings, hostage takings, kidnappings, car bombings, and, frequently, suicide bombings. Although apparently random, the victims and locations of terrorist attacks often are carefully selected for their shock value. Schools, shopping centres, bus and train stations, and restaurants and nightclubs have been targeted both because they attract large crowds and because they are places with which members of the civilian population are familiar and in which they feel at ease. The goal of terrorism generally is to destroy the public's sense of security in the places most familiar to them. Major targets sometimes also include buildings or other locations that are important economic or political symbols, such as embassies or military installations. The hope of the terrorist is that the sense of terror these acts engender will induce the population to pressure political leaders toward a specific political end.

Text 18. Terrorism in the 20th century

The 20th century witnessed great changes in the use and practice of terror. It became the hallmark of a number of political movements stretching from the extreme right to the extreme left of the political spectrum. Technological advances, such as automatic weapons and compact, electrically detonated explosives, gave terrorists a new mobility and lethality, and the growth of air travel provided new methods and opportunities. Terrorism was virtually an official policy in totalitarian states such as those of Nazi Germany under Adolf Hitler and the Soviet Union under Stalin. In these states arrest, imprisonment, torture, and execution were carried out without legal guidance or restraints to create a climate of fear

and to encourage adherence to the national ideology and the declared economic, social, and political goals of the state.

Terror has been used by one or both sides in anticolonial conflicts (e.g., Ireland and the United Kingdom, Algeria and France, and Vietnam and France and the United States), in disputes between different national groups over possession of a contested homeland (e.g., Palestinians and Israelis), in conflicts between different religious denominations (e.g., Catholics and Protestants in Northern Ireland), and in internal conflicts between revolutionary forces and established governments (e.g., in the successor states of the former Yugoslavia, Indonesia, the Philippines, Nicaragua, El Salvador, and Peru). In the late 20th and early 21st centuries some of the most extreme and destructive organizations that engaged in terrorism possessed a fundamentalist religious ideology (e.g., Ḥamās and al-Qaeda). Some groups, including the Liberation Tigers of Tamil Eelam and Ḥamās, adopted the tactic of suicide bombing, in which the perpetrator would attempt to destroy an important economic, military, political, or symbolic target by detonating a bomb on his person. In the latter half of the 20th century the most prominent groups using terrorist tactics were the Red Army Faction, the Japanese Red Army, the Red Brigades, the Puerto Rican FALN, Fatah and other groups related to the Palestine Liberation Organization (PLO), the Shining Path, and the Liberation Tigers.

Text 19. Orientation with map and compass

There are many large areas around the world where one might wander for days without meeting another person or crossing a road. In such places the fisherman, the hunter, the camper, the hiker, and the mountain climber need both map and compass to help them find their way.

The best kind of map for this purpose is a topographic sheet in the scale of 1 inch to 2,000 feet (2.5 centimeters to 610 meters). Topographic maps use line symbols, called contours, to show ups and downs. They also show every creek, pond, and woodland, as

well as man-made features. Such maps may be obtained from a map store or from certain local and national government offices.

One of the best compasses for hikers is the orienteering compass. It is mounted on a transparent plastic plate. The magnetic needle swings inside a fluid-filled housing made of plastic or some other nonmagnetic material. The housing can be turned easily on the plate. The circular edge of the housing is marked into 360 parts, called degrees. Northern Hemisphere and Southern Hemisphere compasses have their needles weighted in opposite manners to compensate for the magnetic pull on their pointers.

The degrees are numbered in clockwise order from zero through 360. North is zero, or 360. East is 90, south is 180, and west is 270. Each degree indicates a possible direction of travel, called a bearing.

If a starting place and destination are marked on a map, the route direction may be determined by using a compass. The following steps will provide a bearing.

On the plastic plate at the top is an arrow marked Direction of Travel. The compass should be placed on the map so that this arrow (or either long edge of the plate) lies along the chosen route. Then the compass housing is turned until the N–S line that runs through it is aligned with north–south on the map. The degree reading below the Direction of Travel line should then be noted.

The direction arrow that has been printed on the topographic map may show a considerable difference between magnetic north and true north. If, for example, the declination is 5 degrees east, 5 degrees are subtracted. If the declination is to the west, the degrees are added.

Text 20. Whitewater rafting

Whitewater Rafting, recreational activity in which people row or paddle an inflatable raft down a fast-running, turbulent river. The term *whitewater* refers to the burbling foam created when fast-moving water spills over and around rocks or other obstructions.

Whitewater rafting has become a popular recreational pastime around the world, especially in the United States. It offers the thrill and challenge of threading between rocks

and over waves in a small, open boat. Most rafting trips provide an exciting ride, with the raft plunging and bucking and occasionally dousing the occupants with water. Rafting is also a convenient way to travel into beautiful, remote areas that may otherwise be difficult to reach.

Because it has numerous safety issues and logistical demands, whitewater rafting is primarily done by commercial services that offer trips for paying customers. These excursions range from one-hour thrill rides to three-week expeditions. Whitewater runs are selected primarily for the size and variety of rapids, as well as the beauty of the surrounding countryside. Logistical considerations — such as convenient areas to put in and take out the rafts and suitable camping spots along the way — also play a role. There are two basic kinds of whitewater rafts: oar boats and paddle boats.

In an oar boat, passengers merely hang on while the guide, sitting in the center of the boat and typically facing downstream, maneuvers the raft with two long oars. No special skill or knowledge is required of the passengers, who are essentially just along for the ride. However, during a large wave or heavy rapids, they may be called upon to quickly shift their weight to the high side of the boat (*high-siding*) to keep it from flipping over.

In a paddle boat, passengers are part of the crew. Working as a team under the command of the guide, everyone vigorously paddles to propel and steer the raft. The guide's commands, often shouted over the roar of rushing water, include "Forward!" "Backpaddle!" and "Stop!" To turn the raft, the guide shouts "Left!" (in which case paddlers on the left side backpaddle, while those on the right paddle forward) and "Right!" (vice versa).

Text 21. Ice and rock climbing

Ice climbing grew out of traditional mountaineering, and ice climbers use the basic equipment, techniques, and safety precautions that alpinists do, with certain specialized changes to account for the added difficulties of ascending vertical sheets of ice. In 1932

French climber Laurent Grivel added two extra front points to Eckenstein's ten-point crampons. This enabled mountaineers to ascend more difficult and steeper climbs over icy routes.

In the early 1970s, American mountaineer and inventor Yvon Chouinard designed curved ice axe picks, which made it easier to drive axes into ice and secure them there. Ice climbers later created more radically drooped ice axe picks and ergonomically designed ice axe shafts, allowing them to venture onto continuously vertical, and even overhanging, frozen waterfalls. Climbers encounter two natural forms of ice: alpine ice and water ice. Mountaineers and alpinists look out for alpine ice, while ice climbers deliberately search for water ice.

Alpine ice is composed of large sheets of snow on mountainsides that over time have melted and refrozen. Water ice occurs at lower altitudes on frozen waterfalls, where it can take the shape of toothy icicles, steep curtains and pillars, freestanding columns, and thin veneers over rock. Whereas alpine climbers regard ice as an obstacle to be overcome in the course of making a longer ascent, ice climbers seek out ice to pit themselves against its verticality and physical difficulty. Ice climbs are therefore shorter than alpine ascents, but they can be more taxing.

Ice climbers use an array of sharply pointed tools, notably 12-point rigid-frame crampons, two ice axes, and ice screws. An ice climber begins an ascent by kicking and securing the front points of each crampon in the ice. The climber then centers his or her body weight over the front points and concentrates on securing the ice axes. The climber swings one axe overhead and lodges it firmly into the ice, then does the same with the other. Then the climber pulls up and resecures the crampons slightly higher.

Text 22. Animal bites and stings.

Animals such as snakes, dogs, cats, small rodents like squirrels, certain insects, and spiders may bite humans with dangerous consequences. Many snakebites are caused by nonvenomous (nonpoisonous) snakes and do not require treatment beyond cleaning the wound. Bites inflicted by venomous snakes require immediate first-aid measures. The victim should be taken as soon as possible to the nearest emergency medical facility. In the interim, the first-aid provider should not cut the area around the bite, attempt to suck out the venom, or apply ice to the wound.

The focus of first aid should be to prevent the venom from spreading rapidly through the individual's bloodstream. The victim should be kept quiet to avoid stimulating circulation of the venom. In addition, the bite area should be kept at a lower level than the rest of the body. The wound should be washed thoroughly with soap and water, blotted dry, and loosely covered with a sterile dressing. Bites from other animals should be thoroughly washed, treated with an antibiotic ointment, and bandaged.

The victim should seek medical attention if the bite is severe, if rabies (an infectious viral disease) is suspected, or if the bite becomes infected. Bites from other humans are particularly prone to serious bacterial infection and should be treated by a medical professional. Victims of any animal or human bite whose immunizations are not current may need a shot for tetanus, an often fatal infectious disease affecting the muscles of the neck and jaw.

Biting insects include fleas, mosquitoes, bedbugs, lice, chiggers, and gnats. Bites from these insects should be washed to prevent infection, and cold compresses or topical medications applied to alleviate itching and pain. Bites from some species of ticks can cause serious illnesses including lyme disease and Rocky Mountain spotted fever. When a tick bites a person, it may attach itself to the body by burrowing into the skin. As a result, a tick should be removed by carefully pulling it straight out with tweezers so as not to leave its head behind. The tick should not be squeezed when it is removed. Bites from most spiders can be treated like those of other biting insects. Bites from black widow spiders and

other poisonous spiders require medical help. They are treated similarly to poisonous snakebites.

Text 23. Cardiopulmonary arrest.

Cardiopulmonary resuscitation (CPR) is used to restore the heartbeat in a victim whose heart has stopped — a condition known as cardiac arrest. Symptoms of this life-threatening condition may include crushing pain or pressure behind the breastbone; pain in the arms, neck, or shoulder; anxiety and a feeling of impending doom; difficulty breathing; heavy perspiration; weakness; nausea; and loss of consciousness. The American Red Cross recommends that CPR be performed only by individuals who have received special training in the recognition of cardiac arrest and proper performance of CPR skills.

CPR combines the techniques of artificial respiration with the application of external heart massage to keep blood flowing through the victim's body. The first-aid provider positions the victim face up on a firm surface and clears the airway of any obstructions. To maintain an open airway, the head is tilted back and the chin lifted forward. The provider then gives the victim two breaths by mouth or mask.

If no pulse is detected at the carotid artery (located in groove beside windpipe in the neck), the first-aid provider kneels next to victim, placing the heel of one hand on top of the other over the lower half of the sternum. The provider depresses the chest about 5 cm (2 in), forcing blood from the heart through the victim's arteries.

When the pressure is released, blood flows into the heart. The first-aid provider applies the pressure in short, rhythmic thrusts about 15 times every ten seconds. This cycle of two breaths followed by 15 chest compressions is repeated until the victim revives or professional medical help arrives.

Text 24. Private fire protection

Commercial and industrial buildings usually have some sort of internal, or private, fire-protection system installed. A sprinkler system is an integrated system of underground and overhead piping, designed in accordance with fire protection engineering standards, and connected to one or more automatic water supplies.

The system is usually activated by heat from a fire, and the sprinkler heads then discharge water over the fire area. Sprinkler systems are nearly 100 percent effective.

Many sprinkler systems are supervised electrically from a central station, and alarms are transmitted to a fire department whenever the sprinklers operate or when a valve in the sprinkler system closes for any reason. If a fire-fighting unit arriving at a fire finds that the sprinkler system is not receiving sufficient water and pressure, a pumper is connected to the sprinkler system to supply additional water.

Many high-rise or other large buildings have an internal system of water mains (standpipes) connected to fire-hose stations. Trained occupants or employees of the building management operate the hoses until the fire department arrives. Fire fighters can also connect their hoses to outlets near the fire.

Buildings may also be equipped with detection systems that will transmit an alarm. Some detectors are designed to respond to smoke, and others to heat. In many jurisdictions, detection systems are required in public buildings, apartment houses, and sometimes even in private homes.

Two major types of smoke detectors are available. One is an ionization device that contains a small radioactive source for ionizing the air molecules between a pair of electrodes, permitting a very small current to flow between the pair.

If smoke particles from a fire enter this space, they reduce the flow of current by

adhering to the ionized molecules. The drop in current sets off a buzzer or other alarm. The second type of smoke detector uses a photoelectric cell. In some of these detectors, smoke that enters obscures a steady beam of light; in others, the smoke scatters a light ray from a diode so that the cell can detect it. In either case the change sets off an alarm. The alarm may sound locally, or it may be designed to alert a central station with notification to the fire department.

Text 25. Safety first

The main causes of accidents in the workplace are not dramatic fires and explosions, but very ordinary accidents that can be easily prevented by workers looking out for their own safety and the safety of others. Many of these accidents are minor, but some cause death or serious injury. The most common cause of accidents is from slips, trips and falls, followed by lifting and carrying. Accidents involving cuts, burns, dropped objects, falling from height, and collisions are also common but often avoidable.

The main preventable measure is safety training. All employees in the oil and gas industry go through regular safety training courses to encourage a strong safety culture. For hazardous areas, employees will be issued with personal protective equipment (PPE) which must be worn in signed areas. Safety boots, hard hats, overalls, gloves, and safety glasses are usually a standard issue. In addition, ear protectors and special trades' equipment such as welding shields, goggles, and gloves will be issued.

Safety signage has to be followed. Signs are classified with different shapes and colours to denote whether they are mandatory, warnings, or giving information.

Most signs are independent of language and use standard symbols as ideograms. The meaning of some of these signs is not always immediately obvious and so they should be learnt. Following information signs is practiced in fire drills where workers must follow signs to safe areas. Those working offshore will attend special courses on helicopter escape, use of life jackets and survival craft, and escape through smoke. There are often opportunities for workers to volunteer as fire officers or first aiders, and special training is given.

4. Методические материалы, определяющие процедуры оценивания знаний, умений, навыков и (или) опыта деятельности, характеризующих этапы формирования компетенций

Основными формами текущего контроля являются: выполнение лексико-грамматических упражнений, тестирование, проект (защита презентации), аннотация, деловое письмо, устный ответ, текст с социокультурной и профессионально-ориентированной направленностью.

Максимальное количество баллов, которое может набрать магистрант в течение семестра за текущий контроль, равняется 80/70 баллам.

Максимальная сумма баллов, которые бакалавр может получить на зачёте, равняется 20 баллам.

Максимальная сумма баллов, которые бакалавр может получить на экзамене, равняется 30 баллам

Зачет и экзамен проводится по результатам выполнения всех видов учебной работы, предусмотренных рабочей программой дисциплины, при этом учитываются результаты текущего контроля успеваемости в течение семестра.

Формой промежуточной аттестации является экзамен, который проходит в форме устного собеседования по вопросам.

Зачёт может проводиться по билетам. Вопросы охватывают все содержание программы учебной дисциплины. Зачёт состоит из двух вопросов.

За семестр студент может набрать максимально 100 баллов.

Содержание зачета (1 семестр 80 баллов текущий контроль, 20 баллов зачет)

1. Чтение и перевод фрагмента текста социокультурной направленности, понимание которого проверяется в форме беседы по содержанию. (10 баллов)
2. Беседа по одной из пройденных тем. (10 баллов)

2.Содержание зачета (II семестр (80 баллов — учебный процесс, 20 баллов — зачет)

1. Чтение и написание аннотации к тексту социокультурной направленности. (10 баллов)
2. Устное монологическое высказывание на одну из изученных тем. (10 баллов)

3.Содержание экзамена (III семестр (70 баллов — учебный процесс, 30 баллов — экзамен)

- 1) Чтение и беседа по тексту социокультурной направленности. (10 баллов)
- 2) Написание аннотации по тексту профессиональной направленности. (10 баллов)
- 3) Беседа по одной из пройденных тем. (10 баллов)

Шкала оценивания зачета

Баллы	Критерии оценивания
20	Студент демонстрирует отличное знание предмета (сформированность умений и навыков иноязычного общения в 4-х сферах коммуникации: повседневно-бытовой, учебно-образовательной, социокультурной и профессиональной): • произношение соответствует программным требованиям; адекватно использует ритмику и мелодику иноязычной речи для выражения своих коммуникативных намерений. • умеет работать с текстами разных типов, полно и точно передает содержание. Логично и последовательно выражает свои мысли. Речь отличается разнообразием языковых средств и точностью их употребления. • при составлении письменной аннотации к прочитанному тексту, передает содержание в точности, соблюдает смысловую связанность и целостность изложения. • способен вести беседу в соответствии с коммуникативной задачей. Умеет точно формулировать свои мысли и выражать свое мнение. Владеет умением спонтанно реагировать на изменения речевого поведения партнера. Владеет техникой ведения беседы: может дать информацию, расспросить, выразить свое видение проблемы, использует в речи сложные грамматические конструкции (в рамках программы) и демонстрирует большой словарный запас.
16	Студент демонстрирует хорошее знание предмета: • произношение в целом соответствует программным требованиям, но встречаются случаи отклонения от нормы. В основном умеет использовать ритмику, мелодику иноязычной речи, хотя иногда речь может быть недостаточно выразительной; • демонстрирует полное понимание текста, речевые высказывания

	состоят из простых предложений; • владеет навыками письменной речи. • способен вести беседу в соответствии с коммуникативной задачей, излагая не только факты, но и свое личное мнение. Владеет техникой ведения беседы, но не всегда может спонтанно отреагировать на речевое поведение партнера. Может допускать коммуникативно незначимые грамматические ошибки. Демонстрирует словарный запас в рамках программы.
10	Студент демонстрирует отдельные речевые навыки и умения: • делает ошибки в произношении и речевой интонации; • не совсем верно понимает содержание текста. Пересказ состоит из крайне простых предложений, при этом допускаются грамматические ошибки; • при составлении аннотации к тексту допускает грубые ошибки в понимании содержания и письменной речи. • может участвовать в беседе, используя упрощенные лексико-грамматические структуры для выражения своих мыслей. Реагирует на вопросы собеседника. Часто при ответах на вопросы использует заученный текст. Обладает ограниченным лексическим запасом.
6	Студент демонстрирует отсутствие сформированности умений и навыков иноязычного общения: • при частичном понимании текста не может передать его содержание. Отвечает лишь на простые вопросы, при этом допускает грамматические и синтаксические ошибки; не способен вести беседу. При ответах на вопросы использует заученные фрагменты тем. Не владеет достаточным количеством устойчивых фраз и выражений для ведения беседы. Не умеет адекватно реагировать на вопросы собеседника. Владеет минимальным запасом лексики, но не умеет его использовать

Итоговая шкала оценивания результатов освоения дисциплины

Итоговая оценка по дисциплине выставляется по приведенной ниже шкале. При выставлении итоговой оценки преподавателем учитывается работа обучающегося в течение освоения дисциплины, а также оценка по промежуточной аттестации

Баллы, полученные по текущему контролю и промежуточной аттестации	Оценка в традиционной системе
81-100	зачтено
61-80	зачтено
41-60	зачтено
0-40	не зачтено

Шкала оценивания экзамена

Баллы	Критерии оценивания
30	Студент демонстрирует отличное знание предмета (сформированность умений и навыков иноязычного общения в 4-х сферах коммуникации: повседневно-бытовой, учебно-образовательной, социокультурной и профессиональной): • произношение соответствует программным требованиям; адекватно использует ритмику и мелодику иноязычной речи для выражения своих коммуникативных намерений. • умеет работать с текстами разных типов, полно и точно передает содержание. Логично и последовательно выражает свои мысли. Речь отличается разнообразием языковых средств и точностью их употребления. • при составлении письменной аннотации к прочитанному тексту, передает содержание в точности, соблюдает смысловую связанность и целостность изложения. • способен вести беседу в соответствии с коммуникативной задачей. Умеет точно формулировать свои мысли и выражать свое мнение. Владеет умением спонтанно реагировать на изменения речевого поведения партнера. Владеет техникой ведения беседы: может дать информацию, расспросить, выразить свое видение проблемы, использует в речи сложные грамматические конструкции (в рамках программы) и демонстрирует большой словарный запас.
22	Студент демонстрирует хорошее знание предмета: • произношение в целом соответствует программным требованиям, но встречаются случаи отклонения от нормы. В основном умеет использовать ритмику, мелодику иноязычной речи, хотя иногда речь может быть недостаточно выразительной; • демонстрирует полное понимание текста, речевые высказывания

	состоят из простых предложений; • владеет навыками письменной речи. • способен вести беседу в соответствии с коммуникативной задачей, излагая не только факты, но и свое личное мнение. Владеет техникой ведения беседы, но не всегда может спонтанно отреагировать на речевое поведение партнера. Может допускать коммуникативно незначимые грамматические ошибки. Демонстрирует словарный запас в рамках программы.
14	Студент демонстрирует отдельные речевые навыки и умения: • делает ошибки в произношении и речевой интонации; • не совсем верно понимает содержание текста. Пересказ состоит из крайне простых предложений, при этом допускаются грамматические ошибки; • при составлении аннотации к тексту допускает грубые ошибки в понимании содержания и письменной речи. • может участвовать в беседе, используя упрощенные лексико-грамматические структуры для выражения своих мыслей. Реагирует на вопросы собеседника. Часто при ответах на вопросы использует заученный текст. Обладает ограниченным лексическим запасом.
6	Студент демонстрирует отсутствие сформированности умений и навыков иноязычного общения: • при частичном понимании текста не может передать его содержание. Отвечает лишь на простые вопросы, при этом допускает грамматические и синтаксические ошибки; не способен вести беседу. При ответах на вопросы использует заученные фрагменты тем. Не владеет достаточным количеством устойчивых фраз и выражений для ведения беседы. Не умеет адекватно реагировать на вопросы собеседника. Владеет минимальным запасом лексики, но не умеет его использовать
